Strauss, name of a family of Viennese musicians. Johann (1804–49), organized his own orchestra in 1826 and became famous for his waltzes. His son Johann (1825–99) also formed an orchestra, in 1844. It rivalled that of his father, but the two were combined after the elder Johann's death. Johann the younger composed nearly 500 waltzes, including the popular *Blue Danube* (1867) and *Tales from the Vienna Woods* (1868). Two of his brothers, Josef (1827–70) and Eduard (1835–1916), were also successful conductors and composers.

Strauss, Richard (1864–1949), German composer and conductor. He was influenced by Richard WAGNER and was a master of highly evocative richly orchestrated PROGRAMME MUSIC. His best-known works are a number of SYMPHONIC POEMS, which include *Don Juan* (1889), *Till Eulenspiegel* (1895) and *Zarathustra* (1896). He is also famous for his operas, such as *Salome* (1905), *Elektra* (1908) and *Der Rosenkavalier* (1911). Of the many songs he composed, most famous are those which have become known collectively as the *Four Last Songs* (1948). See also pp.1582, 1583, 1598, 1754.

Stravinsky, Igor Feodorovich (1882–1971), Russian composer, one of the most influential in the 20th century. After studying with RIMSKY-KORSAKOV (1903–06) he emigrated to Western Europe in 1910 and to the USA in 1939. His early ballets *The Firebird* (1910) and *Petrushka* (1911) earned him popularity and a reputation as a master of ballet music. His violent and primitive orchestral master-

piece *Le Sacre du Printemps* (*The Rite of Spring*, 1913) revolutionized orchestral composition and established him as a major composer. Later works included ballets modelled after TCHAIKOVSKY, such as *The Fairy's Kiss* (1928); Neoclassical instrumental and orchestral works, such as *The Violin Concerto* (1931); and experiments in serialism and 12-tone music, such as the ballet *Agon* (1957). See also pp.1754, 1759.

Strawberry, fruit-bearing plant of the rose family, common in Europe and Asia. It has three-lobed leaves and clusters of white or reddish flowers, and sends out runners that root and produce new plants. There are two types: one that produces fruit in early summer, and one that produces one crop in early summer and another in the autumn. Family Rosaceae; genus *Fragaria*. See also pp.674, 710.

Strawflower, Australian annual plant that is widely cultivated for the white, yellow, orange or red flower heads that keep their bright colour when dried. Height: to 91cm (3ft). Family Compositae; species *Helichrysum bracteatum*.

Stream of consciousness, literary style in which the thoughts and feelings of characters are given free rein, as they might come to them, without the usual literary regard for narrative continuity or logical sequence. Its first appearance in literature is generally regarded as Edouard Dujardin's novel *Les Lauriers Sont Coupés* (1888), although the phrase itself comes from William JAMES'S *Principles of Psychology*, published two years later. Its foremost exponents in English have been James Joyce and Virginia Woolf.

Street, George Edmund (1824–81), British architect and a leader of the GOTHIC REVIVAL. He designed many churches, including St James the Less (1861) in Westminster, London. His best-known building is the Law Courts (1874–82) in London, the last great attempt to apply the ideas of the Gothic revival to public architecture. See also pp.1600, 1601.

Street lighting, lamps sited to illuminate roads. Gas street lighting was first introduced in the 19th century to deter crime. Later large cities were lit by electric arc or filament lamps. After WWI street lighting in Britain provided vision by reflection, ie the road was lit strongly to form a bright background against which objects were seen in silhouette. After WWII improved road surfaces were found to be unsuitable for silhouette vision, and the European system of direct vision, whereby objects rather than road are illuminated, was adopted. Today sodium discharge lamps (for traffic routes) and mercury vapour lamps (for city centres) are widely used.

Streeton, Arthur (1867–1943), leading Australian painter and member of the Heidelberg school led by Tom ROBERTS. He is best known for his landscape paintings in a style which was influenced by the IMPRESSIONISTS. He spent many years abroad, and from 1916 to 1918 was the official war artist for the Australian WWI forces in France.

Streisand, Barbra (1942–), US singer and actress. Her performance on Broadway in *Funny Girl* (1964) was highly praised. She has sung in concert and made numerous recordings. Her films include *Funny Girl* (1968), *Hello Dolly* (1969), and *A Star is Born* (1976).

Strepsiptera, order of parasitic insects; having about 400 species. The female is wingless and never leaves the host, the male has back wings and emerges from the bee as an adult.

Streptococcus, genus of BACTERIA characterized by gram-positive spherical cells that grow in bead-like chains. They occur in the mouth, respiratory tract and intestine of man. Some are pathogenic, causing scarlet fever and throat infections, which may be treated with ANTIBIOTICS.

Streptomycin, antibiotic drug used to treat certain bacterial diseases resistant to PENICILLIN. It may produce side effects such as deafness and giddiness. Its discovery in 1944 by Selman A. WAKSMAN led to the development of other related ANTIBIOTICS. Streptomycin is used to treat tuberculosis.

Stresemann, Gustav (1878–1929), Chan-

Stress

cellor of Germany (1923) and Foreign Minister (1923-29), the outstanding statesman of the WEIMAR REPUBLIC. He concluded the Pact of LOCARNO in 1925, in one of his many efforts to make a workable post-war settlement with the Allies. He negotiated Germany's entry into the LEAGUE OF NATIONS in 1926 and in that year shared the Nobel Peace Prize with Aristide BRIAND.

Stress, in medicine, mental or physical strain brought on by pressures from the environment. See also pp.1059, 1106, 1107.

Stress, in physics, quantity describing the internal pressure of an object being stretched, twisted or squeezed. If any part of the object with cross-sectional area A is subjected to a tensile or compressive force F having components F_x perpendicular to A and F_y tangential to A , then the normal stress is F_x/A and the tangential (or shearing) stress is F_y/A . In a fluid, no shearing stress is possible because the fluid slips sideways. Thus all fluid stresses are normal stresses and are denoted by the term **PRESSURE**.

Strigiformes, OWLS, an order of birds found worldwide. Owls are birds of prey. Their large eyes contain many more rods (cells that enable night vision) than do the eyes of other birds but no cones (cells that enable colour vision). Owls have soft feathers which allow them to fly silently. There are about 120 species. See also pp.84, 297, 301, 318, 325.

Strijdom, Johannes Gerhardus (1893-1958), South African statesman, Prime Minister from 1954 to 1958. He practised law before being elected to Parliament in 1929 and becoming leader of the National Party, advocating APARTHEID.

Strike, employees' concerted withdrawal of their labour, defined in Britain by the Industrial Relations Act (1971) as a furtherance of an industrial dispute in breach of a contract of employment. Historically, the use of strikes developed when workers collectively tried to improve their lot through TRADE UNIONS. See also pp.1570, 1653, 1675, 1692-1695, 1695, 1704, 1744.

Strindberg, Johan August (1849-1912), Swedish dramatist. A master of language, he wrote more than 50 plays in many styles. He is best known outside Sweden for *The Father* (1887) and *Miss Julie* (1888). See also p.1883.

Stringed instruments, variety of musical instruments which are sounded by the vibration of strings. They fall into different classes according to the action used to set the strings in motion. There are bowed stringed instruments, chiefly those of the VIOLIN family (the "strings" in an orchestra); plucked stringed instruments, chiefly the HARP, LUTE and GUITAR; and plucked and struck stringed instruments, such as the CITTERN and DULCIMER. KEYBOARD INSTRUMENTS which have strings, such as the HARPSICORD and the PIANO, are not usually referred to as stringed instruments.

Strip cultivation, method of agriculture prevalent in medieval England. The large open fields of the MANORS were divided into strips and farmed by tenants. The method was gradually superseded by larger holdings during the period of ENCLOSURES. See also pp.652, 752, 1464-1465, 1464-1465.

Strip grazing, method of feeding livestock on pastures that are divided into strips. Up to three or four strips can be used; one is grazed and then left to grow while the stock is moved to the second, and then the third in sequence. See also pp.652-653.

Stroboscope, or **strobe**, apparatus which emits regular flashes of light, the intervals of which can be varied. Stroboscopes usually have a calibrated scale from which the interval is read. They are used in photography to make multiple exposures of moving subjects, and in engineering to apparently "slow down" moving objects for observation. They are also used to find the speed of rotation of such objects as a wheel by adjusting the rate of flashing until it equals the rotation speed, when the wheel seems to be stationary.

Stroessner, Alfredo (1912-), President

of Paraguay (1954-). As commander-in-chief of the armed forces, he led the coup that overthrew the regime of Federico Chavez in 1954. He was re-elected four times (1958, 1963, 1968, 1973). His rule was essentially totalitarian but, using foreign aid, he introduced development programmes, building roads, bridges and schools.

Stroheim, Erich von (1885-1957), US actor and film director, b. in Austria as Hans Erich Maria Stroheim von Nordenwall. His films, including *Blind Husbands* (1919), *Foolish Wives* (1921), *Greedy* (1923) and *Queen Kelly* (1928), were noted for their originality. He turned to scriptwriting and acting, and appeared in *La Grande Illusion* (1937) and *Sunset Boulevard* (1950). See also pp.1760, 1760.

Stroke, or apoplexy, interruption of the flow of blood to the brain. It is caused by blockage or rupture of an artery and results in temporary or permanent paralysis, difficulty in speaking or loss of muscular co-ordination. It may occur without symptoms or after a period of headaches and irritability. Treatment includes surgery, drugs to reduce clotting and physiotherapy. See also pp.1066, 1066, 1072.

Stromboli, volcanic island NE of Sicily that gives its name to a characteristic type of volcanic eruption in which molten rock is blasted out of the crater by large amounts of accumulated gas. See also p.204.

Strong interaction, strongest of the four basic forces in physics. Its effects can be observed only in the sub-atomic realm, being of very short range. It is responsible for holding an atomic NUCLEUS together.

Strontianite, carbonate mineral, strontium carbonate (SrCO_3), found in limestone veins. It has an orthorhombic system, massive or columnar aggregates or hexagonal twinned crystals, and is pale green, white, grey, yellow or brown. Hardness 3.5-4; s.g. 3.7.

Strontium, metallic element (symbol Sr) of the ALKALINE-EARTH ELEMENTS in group IIa of the periodic table. It occurs naturally in strontianite (the carbonate) and celestite (the sulphate) and is extracted by electrolysis. Strontium salts are used to impart a red colour to fires and fireworks. Strontium-90 is a RADIOACTIVE ELEMENT present in fall-out, from which it is absorbed into milk and bones. At.no. 38, at.wt. 87.62, s.g. 2.554, m.p. 769°C (1,416°F), b.p. 1,384°C (2,523°F).

Strophanthus, genus of tropical Old World trees and shrubs with showy flowers. The seeds and bark of several African species are the source of strophanthins, ALKALOIDS used as cardiac drugs and also as poisons. Species used include *S. kombe* and *S. hispidus*. Family Apocynaceae.

Stroud, county district in SW GLOUCESTERSHIRE, W England; created in 1974 under the Local Government Act (1972). Area: 454sq km (175sq miles). Pop. (1974 est.) 93,400.

Strougal, Lubomir (1924-), Czechoslovak politician and Prime Minister. A member of the Czech Communist Party since 1945, he was secretary of the central committee from 1965 to 1968 and was made deputy Prime Minister in 1968. He became Prime Minister in 1970.

Strowger, Almon, (fl. 1880s) US inventor of the automatic electromechanical telephone exchange (1889, patented 1891). See also p.636.

Structural analysis, study of the deformation, faulting, folding and crumpling of rock strata, often reproduced using laboratory models.

Structural functionalism, sociological system proposed by Talcott PARSONS and RADCLIFFE-BROWN. It analyses society with reference to the social and psychological "functions" of the various institutions and status "structures", which include set social relationships and beliefs. The theory concentrates on the stability and integration of the social system.

Structuralism, two related theories in sociology. One involves the study of social status systems and status-related duties in order to discover the society's "social morphology", or structure. The second,

proposed by Claude LÉVI-STRAUSS, is an inter-disciplinary theory that uses anthropology, linguistics, psychology and folklore to analyse all modes of social behaviour - from marriage rites to fashion - to build up a model of the particular society. Structuralists then attempt to construct a general model of society, to particularize the ways in which each society is unique, and to relate social structure to the structure of the human mind.

Strutt, Jedediah (1726-97), British KNITTING-machine pioneer. In 1758 he invented the Derby rib hosiery frame that could be attached to a stocking frame to produce a ribbed weave. He went into partnership with Sir Richard ARKWRIGHT in Nottingham in 1771.

Strutt, John William, Lord Rayleigh. See RAYLEIGH, JOHN WILLIAM STRUTT, LORD.

Struve, Friedrich Georg Wilhelm von (1793-1864) German astronomer who catalogued more than 3,000 stars, including many previously undiscovered DOUBLE STARS. In 1838 he became one of the first astronomers to measure the PARALLAX of a star, VEGA.

Struwpeter (1903), collection of highly moral stories, told in verse by Heinrich Hoffman. The work is fully illustrated and depicts the fate of various children who would not do as they were instructed; Struwpeter himself would not allow his hair and fingernails to be cut. The children suffer various fates including physical injury and even death.

Strychnine, poisonous ALKALOID obtained from the plant *Strychnos nux-vomica*. In the past it was believed to have a therapeutic value in small doses, as these can stimulate the nervous system. Symptoms of strychnine poisoning include muscular spasms and stiffness of posture.

Strydom, Johannes Gerhardus (1893-1958), South African statesman who became leader of the extremists in the National Party in 1929. He aimed mainly for native apartheid. From 1954 until shortly before his death he was Prime Minister.

Stuart, or Stewart, Scottish family of Breton origin, the senior branch of which inherited the Scottish crown in 1371 (ROBERT II) and the English crown in 1603 (JAMES I). Over a period of two centuries, seven Stuarts ascended the Scottish throne as monarchs through sudden deaths. The direct male line died out with JAMES V in 1542. His daughter, MARY, QUEEN OF SCOTS, was succeeded by her son, JAMES VI who, on the death of ELIZABETH I, became also JAMES I of England. After the execution of James's son, CHARLES I, in 1649 the Stuarts were excluded from the throne until the RESTORATION of CHARLES II in 1660. With the deposition of JAMES II in 1688, the throne passed to his daughter MARY and her husband, WILLIAM III, who were succeeded by another daughter, Queen ANNE. The throne then passed to the HANOVERIAN dynasty. The last Stuarts of the royal English line were grandsons of James II: Charles Edward STUART (Bonnie Prince Charlie) and Henry Stuart, Cardinal York, known to JACOBITES as Charles III and Henry IX respectively.

Stuart, or Stewart, Charles Edward (1720-88), English prince and claimant to the throne, also called "Bonnie Prince Charlie" and the "Young Pretender". A grandson of the deposed JAMES II and son of James Francis Edward STUART, he landed in Scotland in 1745 to claim the throne. He was initially victorious at PRESTONPANS and reached the city of Derby but was persuaded by his commanders to withdraw. A Hanoverian force under the Duke of CUMBERLAND annihilated his army at CULLODEN (1746) and he went into exile. See also pp.1472, 1472.

Stuart, Gilbert Charles (1755-1828), US artist who painted portraits in Europe and eventually settled in Boston. His best-known works are three precisely rendered portraits of George WASHINGTON and his many replicas of these.

Stuart, James (1713-1788), British architect who began the revival of Greek architectural forms and motifs in England. He was called "Athenian Stuart" after his *The Antiquities of Athens* (1762). He rebuilt

the interior of the chapel of Greenwich Hospital (1779-88).

Stuart, James Ewell Brown (1833-64), US Civil War Confederate general. At the age of 29, "Jeb" Stuart commanded Robert E. Lee's cavalry, and he became a brilliant leader. See also pp.1628-1629.

Stuart, or Stewart, James Francis Edward (1688-1766), also called "The Old Pretender", claimant to the British throne, only son of JAMES II. Brought up in France, he was proclaimed King of England in 1701 on the death of his father. In 1715 he made an unsuccessful bid to gain the English throne. He spent most of his remaining years in Rome. See also pp.1472, 1472.

Stuart, Mary. See MARY II.

Stubbs, George (1724-1806), British painter and etcher, famous for his mastery of horse painting. He was interested in anatomy and in 1766 published *Anatomy of the Horse*. A keen observation and a strong sense of form and spatial organization are characteristic of his paintings, which include the highly acclaimed *Phaeton and Pair*.

Stubbs, William (1825-1901), British historian and Bishop of Oxford (1888-1901). He founded the organized study of English medieval constitutional history and wrote *The Constitutional History in Its Origin and Development* (1873-78).

Stucco, coating of rough plaster on walls, generally made of lime, gypsum and sand. It can be coloured and variations in texture are easy to obtain.

Stud, National, establishment for the breeding of thoroughbred horses, founded in Kildare, Ireland, in 1915 when Lord Waverley presented his stud to the British nation. It was resettled at Gillingham, in Dorset, England, in 1943 and, maintained by the Ministry of Agriculture, produced many famous racehorses. It came under the management of the Horserace Betting Levy Board in 1963, and a new National Stud was opened at Newmarket, in Suffolk, in 1967.

Stupa, Buddhist monument, found throughout SE Asia, but mainly in India and Sri Lanka, with a circular dome surrounded by a processional path, a stone railing, and sometimes topped by a mast or pole. Some of the most characteristic were built c. 100 BC. See also p.1254.

Sture family, Swedish noble family which fought for independence from Danish rule under the Kalmar Union during the 15th and 16th centuries. The family include distinguished regents of Sweden: Sten Sture the Elder (c.1440-1503; r.1470-1503), his nephew, Svante Nilsson Sture (c.1460-1512; r.1503-12) and Svante's son, Sten Sture the Younger (c.1492-1520; r.1512-20).

Sturgeon, William (1783-1850), British electrical engineer who demonstrated (1825) the first electromagnet capable of useful work. It consisted of a soft iron core insulated with varnish and wound with 18 turns of bare copper wire; it was capable of supporting 4kg (9lb) and was powered by a single cell. Sturgeon also built an electric motor, invented the COMMUTATOR and the suspended coil GALVANOMETER, and studied charges in clouds by flying kites. See also pp.872-873.

Sturgeon, large, primitive, bony fish found in temperate fresh and marine waters of the Northern Hemisphere. The ovaries of the female are the source of CAVIARE. It has five series of sharp-pointed scales along its sides, fleshy whiskers and a tapering snout-like head. Family Acipenseridae; species Atlantic sturgeon (*Acipenser sturio*) length: to 3.3m (11ft), weight: to 272kg (600lb). The Eurasian freshwater sturgeon is also called BELUGA. See also pp.56, 742-743.

Sturges, John (1911-), US film director. He began his career as a production assistant for David SELZNICK, becoming a director after WWII. He made a number of WESTERNS including *Bad Day at Black Rock* (1954), *Gunfight at the OK Corral* (1956) and *The Magnificent Seven* (1960). He also made *The Great Escape* (1963).

Sturm und Drang ("Storm and Stress"), name of a German literary movement

associated principally with the early writings of Johann Gottfried von Herder, Johann Wolfgang von Goethe and Friedrich Schiller. The term was first employed by Christoph Kaufmann to describe Friedrich Maximilian Klinger's play *Der Wurm* (1776). Characteristic elements of Sturm und Drang writings include medieval knights, sieges and battles and hostile brothers.

Sturt, Charles (1795-1869), Australian explorer, b. India. After military service he went to Australia in 1827. On his first expedition (1828-29), with Hamilton Hume, he discovered the Darling and Murray rivers. Convinced that he would find an inland sea, he led an expedition to the edge of the Simpson Desert (1844-46) but, faced with the hostile conditions, was forced to retreat. Sturt retired to England in 1853.

Stutter, SPEECH DEFECT in which sounds or syllables are continually repeated. Caused by a variety of factors, including a lack of co-ordination of the muscles of the LARYNX, it may also include a psychological component.

Stuttgart, city in SW West Germany, on the River Neckar 61km (38 miles) ESE of Karlsruhe; capital of Baden-Württemberg state. Founded c.950, the city became the seat of the counts (later dukes and kings) of Württemberg from 1495 to 1806. Stuttgart was severely damaged during WWII. Buildings of interest include the Solitude Palace (1763-67), New Palace (1746-1807) and the Rosenstein Palace (1824-29); the city is also known for its fine modern architecture. Industries: publishing, textiles, chemicals, paper, wine, iron and steel, machinery, electrical equipment, motor vehicles, musical instruments, tourism. Pop. (1979 est.) 581,689.

Stuyvesant, Peter (c.1610-72), Dutch colonial governor. He became Governor of the Caribbean Islands of Curaçao, Bonaire and Aruba in 1643, and in 1647 he was named Director-general of all the Dutch territories, including New Amsterdam (later New York City). As governor he ruled in an autocratic manner, denying religious and political freedom and causing discontent among the colonists. He ended Swedish influence in Delaware (1655). He ruled until the colony was taken over by the English in 1664 and renamed New York.

Stye, infection of an eyelid gland, caused by a STAPHYLOCOCCUS organism. It may occur externally, on the edge of the lid, or internally, under the lining. A small boil or pimple with a central yellow spot erupts, then breaks and discharges its contents.

Style, in botany, the slender tube that forms part of the pistil of a flower, and connects the pollen-receiving STIGMA at its tip to the ovary at its base. See also p.383.

Styrene, colourless, liquid HYDROCARBON, important as a MONOMER of POLYSTYRENE, a plastics material familiar as hard foams. It is also a monomer of styrene-butadiene rubber, or SBR, the artificial rubber most commonly used in pneumatic tyres. Styrene is a derivative of benzene; its formula is $C_6H_5CH=CH_2$. Properties: m.p. 145.2°C (293.4°F), b.p. -30.6°C (-23.1°F). See also pp.588-589.

Styx, in Greek mythology, the river across which the souls of the dead were ferried by CHARON on their journey from the world of the living to HADES or the underworld.

Subatomic particles, discrete states of matter characterized by various parameters such as CHARGE, mass, lifetime and SPIN. Matter is fully described in terms of the forces that hold it together of which there are four: GRAVITY; the electromagnetic force, which is millions of times stronger than gravity and responsible for the attraction between the nuclei of atoms and orbiting electrons; the STRONG INTERACTION force, which is the nuclear "cement", some 7,000 times stronger than the electromagnetic force and which acts over extremely short distances (less than 10^{-14} m); and the WEAK INTERACTION, some one-thousandth of the strength of the electromagnetic force, and observed in the transformations of some particles,

such as that in beta decay when a neutron changes to a proton, an electron and an antineutrino. Subatomic particles which have been recognized are classified into two large groups, based on whether they undergo interactions determined by either the electromagnetic or strong interaction. In the first group are the LEPTONS, such as NEUTRINOS, ELECTRONS and POSITRONS; in the second are the HADRONS, which are further split into NUCLEONS, such as PROTONS, NEUTRONS and their anti-particles, HYPERONS such as lambda zero, sigma minus and xi plus, and the third group in the hadrons, the MESONS such as K plus and pi minus. See also pp.818-819.

Subconscious, any of the mental processes that occur just below the level of awareness. Psychoanalysts define it as a zone between the conscious and the unconscious and believe it is where many important psychological activities occur. Much of psychoanalysis involves bringing into awareness subconscious processes.

Sub-culture, in sociology, any cultural group bound together by shared attitudes or interests. Sub-cultures often develop life-styles that differ from and conflict with those of the larger culture or society within which they exist.

Subjection of Women, The (1869), political treatise by John Stuart MILL. It discusses the political, social and economic reasons for the inferior status of women in British society.

Sublimation, change from solid to gas, without an intervening liquid phase. Dry ice (solid carbon dioxide) sublimates from the solid phase directly to the gaseous phase. Most substances can sublimate at certain pressures, but usually not at atmospheric pressure. See also CONDENSATION; EVAPORATION.

Sublimation, in psychology, the substitution of socially acceptable behaviour or motives for needs that are not attainable or acceptable. For example, a hostile person might become a literary critic; an aggressive individual, an athlete. Thus the individual's needs are met by channelling destructive impulses into constructive activities.

Submachine gun, automatic gun smaller than a machine gun, in which the exhaust gases power the reloading mechanism. The earliest example was a Luger, used in WWI, and many submachine guns were used in WWII. See also p.559.

Submarine, seagoing warship capable of travelling both on and under the water, armed principally with torpedoes. Submarines were planned in the 16th century, but not until Cornelis Drebbel, a Dutch inventor, took a greased leather submarine underwater c.1620 were they built. Experimental submarines were used in warfare in the late 18th and 19th centuries, to little effect. Technical advances of the late 19th century led to the general spread of underwater craft in the world's navies. Early submarines were essentially surface ships with a limited ability to remain submerged. Once underwater, they depended on battery-powered electric motors for propulsion and, with a limited air supply, were soon forced to surface. Submerging is accomplished by letting air out of internal ballast tanks; trimming underwater is done by regulating the amount of water in the ballast tanks with pumps; and surfacing is accomplished by pumping ("blowing") the water out of the tanks. The most modern submarines use nuclear power, which eliminates the need to surface while on operations. See also NUCLEAR SUBMARINES; pp.478, 568.

Submarine cables. See CABLE.

Submarine canyon, deep, steep-sided valley that cuts through a continental shelf. Some are aligned with large land rivers, making it likely that they are formed when sediment deposited on the shelf becomes unstable, and gravity causes it to slump. This creates a turbid bottom current that races downslope on to the deep-sea floor, scouring out the canyons. See also p.238.

Submersible, small mobile underwater craft. It is distinguished from a submarine in that its uses are not military, and from a

bathysphere in that it is self-powered. Submersibles were developed in the late 1950s for engineering and research work; they carry a small crew and often have mechanical tools outside the craft. See also pp.479, 485.

Subparticles, elementary, postulated constituents of the HADRON group of elementary particles. Experimental evidence indicates that PROTONS are made up of tiny point-like bodies, termed partons. There is also evidence that the parton is the theoretical QUARK. Although the eight LEPTONS appear to be point-like particles, the large number of hadrons could be explained by various combinations of two or three quarks. See also p.818.

Sub-plot, series of actions subsidiary to the main action in a play or novel. It either complements or parallels the main action and many of Shakespeare's plays contain sub-plots. In *King Lear* the Gloucester-Edgar-Edmund sub-plot parallels the development of the tragedy of Lear.

Subpoena, in law, means under penalty, an order that commands a person to appear before a court or judicial officer to give evidence at a specific time and place. Failure to obey a subpoena is a criminal offence.

Subscript, small letter, number or other symbol written or printed below and to the left or right of another symbol, as in a chemical formula (such as C_2H_6) or with different values, $x_1, x_2, x_3, \dots, x_n$, of a mathematical variable.

Subset. See SET THEORY.

Subsidiary, in business, a company that is controlled to some extent by another company which holds a majority of the shares.

Subsidies, government assistance to individuals or organizations to benefit the public. Subsidies have been used in Britain since WWI, when they were introduced to keep down the price of food and clothing. They are generally used to protect home industries by enabling them to offer competitive prices in domestic or overseas markets. Other commonly subsidized enterprises include agriculture (the subsidization of farm prices has been widespread in Britain since WWII), business expansion, housing and regional development. Subsidies can be direct (for example, cash payments) or indirect (for example, when the government buys goods at artificially high prices or grants tax concessions, export incentives or rent subsidies).

Subsistence economy, condition in which economic activity provides only the bare necessities for survival; items are produced for consumption by the people who produce them, not for sale in a market. In such primitive economies, money and trade are not yet in evidence and the standard of living is usually very low.

Substitution, chemical reaction in which one atom or group of atoms replaces (usually in the same structural position) another group in a molecule or ion. Chemists differentiate electron-rich incoming groups, such as the hydroxyl and halogen ions, from electron-deficient groups, such as the hydroxonium ion (H_3O^+) and the nitro group (NO_2^+), and unstable uncharged species called radicals.

Succubus. See INCUBUS.

Succulent, plant that stores water in its tissues to resist periods of drought. Usually perennial and evergreen, most of the succulent plant body is made up of water storage cells, which give it a fleshy appearance. A well-developed cuticle and low rate of daytime transpiration also conserve water. Succulent plants include CACTUS, MILKWEED, LILY and STONECROP.

Sucker, any of several species of freshwater fish found mainly from N Canada to the Gulf of Mexico. A bottom-grubber similar to minnows, it has a thick-lipped mouth for feeding by suction. Length: to 66cm (26in); weight: to 5.4kg (12lb). Family Catostomidae.

Sucking-fish. See REMORA.

Suckling, Sir John (1609-42), English Cavalier lyricist, once described as "the greatest gallant of his time, and the greatest gamester". After plotting unsuccessfully to rescue the Earl of Strafford from the Tower of London he fled to

Stuttgart's ball-bearing and machine-tool factories were heavily bombed in WWII.

Submarine: tanks fore and aft give buoyancy, those on the side keep it level.

Succulents are found in deserts and low-rainfall areas throughout the world.

Sir John Suckling: facsimile of his portrait and title-page of *Fragmenta Aurea*.

Suez Canal; a navy salvage vessel beside a sunken ship blocking the canal in 1956.

Suffolk; a timber-framed house, typical of buildings in the county.

Sugar-beet; the sugar contains up to 98% sucrose, and 99.9% after refining.

Sugar cane; after a crop has been cut, it will send up new crops for many years.

Paris, where he reputedly committed suicide. His works include a collection of poems, *Fragmenta Aurea* (1646) and a play, *Aglaura* (1637).

Sucrase, ENZYME secreted by the small intestine which breaks down SUCROSE (ordinary sugar) into GLUCOSE and FRUCTOSE so they can be absorbed during the digestive process.

Sucre, **Antonio José de** (1795–1830), South American patriot, BOLÍVAR's chief of staff, key figure in the liberation of Ecuador, Peru and Bolivia. Sucre commanded the rebel forces at the battle of Ayacucho (1824), the decisive engagement in the struggles for independence. He was elected first constitutional President of Bolivia in 1826 and proved an able administrator, but political rivalries forced him to resign in 1828. He took service with Colombia but was assassinated in 1830.

Sucre, city in s central Bolivia; it is the legal capital of Bolivia, the seat of government being La Paz. Known successively as La Plata, Chuguisaca and Charcas, Sucre was renamed in 1839 after the revolutionary leader and first president of Bolivia, Antonio José de SUCRE. The city is the seat of the national university of San Francisco Xavier de Chuquisaca (1624). Today it is a commercial and distribution centre for the surrounding farming region, and has cement and oil refining industries. Pop. (1975 est.) 106,590.

Sucrose, disaccharide sugar (formula $C_{12}H_{22}O_{11}$) consisting of linked GLUCOSE and FRUCTOSE units. It occurs in many plants, but its principal commercial sources are sugar cane (*Saccharum officinarum*) and sugar-beet (*Beta vulgaris*). It is also obtained from maple trees, date palms and sorghum, and is widely used for food sweetening and in the manufacture of preserves. See also pp.906, 906.

Suctorida, order of PROTOZOA having cilia in their immature motile stages before developing into non-motile uniliated adults. They have long hollow protoplasmic extensions which are used to suck in prey. Genera include *Tokophrya*.

Sudan, independent nation in NE Africa. The largest country in the African continent, the Sudan's terrain includes tropical forests, swamplands, arid hills and the Libyan and Sahara deserts. The White Nile flows through the country, providing valuable irrigation in the N. Most of the people are subsistence farmers or nomadic pastoralists. Exports include cotton, groundnuts and sesame. The capital is Khartoum. Area: 2,505,813 sq km (967,494 sq miles). Pop. (1980 est.) 18,400,000. See p.2142.

Sudd marshes, swampy lowland region in the s central Sudan, fed by the Bahr al-Ghazal and the Bahr-al-Jebel. The area is inhabited by Nilotic Nuer tribes. Length: 403 km (250 miles). Width: 322 km (200 miles).

Sudetenland, name given to a strip of territory along the Sudeten Mts, located in Czechoslovakia but inhabited by German-speaking people. From 1526, under HAPSBURG rule, Germanic influences permeated throughout Bohemia and Moravia, remaining dominant until a Czech nationalist movement began in the 19th century. The new independent country of Czechoslovakia was created after WWI but the German-speaking parts were ceded to HITLER in the MUNICH AGREEMENT of 1938. After WWII Czechoslovakia reclaimed Sudetenland and expelled most of the Germans. See also pp.1700, 1700, 1708, 1709.

Suede, LEATHER which has been given a nap finish by buffing its flesh side with fine sandpaper. After the hide or skin has been cleaned by soaking in water, scraping and soaking again in a mild acidic solution, it is tanned, ie treated with any of various acid solutions which change the skin to leather. The leather is then dyed and given the desired finish, which may be smooth or suede.

Suetonius (Gaius Suetonius Tranquillus) (c. AD 69–c.140), Roman author. A lawyer and secretary to Emperor HADRIAN, Suetonius is best-remembered as a biographer. Two collections of his

work survive: parts of *De viris illustribus* (*On Famous Men*), biographies of literary figures, and *De vita Caesarum* (*The Lives of the Caesars*), biographies of rulers from Julius CAESAR to DOMITIAN.

Suez, city in NE Egypt, at the N end of the Gulf of Suez and the S terminus of the SUEZ CANAL. A naval and trading station in the 16th century, it developed into a leading port in 1869 after the completion of the Suez Canal. The city was occupied by Israelis in the 1973 ARAB-ISRAELI WAR and suffered damage during the fighting. Industries include oil refining and paper making. Pop. (1974 est.) 368,000.

Suez Canal, waterway linking the Mediterranean Sea and the Red Sea. It was planned and built (1859–69) by the Suez Canal Company under the supervision of Ferdinand de LESSEPS. After the introduction of steam vessels, its use increased and ISRAELI purchased (1875) the Egyptian-held stock to make the British government the largest stockholder. In 1955 more than 120 million tonnes of merchandise passed through the canal, much of it oil. Egypt nationalized the canal in 1956, Israel attacked Egypt in the same year and the canal was closed from 1956 to 1957, while repairs were being made. Egypt gained control of the canal and closed it during the ARAB-ISRAELI WAR of 1967; it was not re-opened until 1975. In the intervening period many ships, especially oil tankers, were built for use on alternative sea routes and were too large to pass through the canal. The subsequent loss of revenue forced Egypt to begin to clear and widen the waterway. See also pp.1609, 1611, 1634, 1701, 1719, 1783.

Suez Crisis (1956), Middle East conflict. When Britain and the USA announced that they would not provide financial assistance for Egypt's ASWAN Dam project, the President of Egypt, Gamal Abdel NASSER, nationalized the SUEZ CANAL. Israel, denied use of the canal, invaded Egypt. Britain and France then also invaded the canal area. UN intervention ended the crisis, and treaties gave Egypt control of the canal.

Suffolk, county in E England, on the North Sea coast. The land is mainly low-lying, rising to the East Anglian Heights in the SW. The principal rivers are the Orwell, Stour and Waveney. The economy is mainly agricultural; cereal crops and sugar-beet are grown and sheep, cattle, horses and poultry are reared. Fishing is important along the coast. The principal industries are food processing, farm machinery and fertilizers. The county town is Ipswich. Area: 3,807 sq km (1,470 sq miles). Pop. (1979 est.) 597,600.

Suffolk Coastal, county district in E and SE SUFFOLK, England; created in 1974 under the Local Government Act (1972). Area: 892 sq km (344 sq miles). Pop. (1979 est.) 98,600.

Suffrage, in politics, the right to VOTE in BALLOTS or ELECTIONS, considered to be one of the primary elements of DEMOCRACY. Although mass suffrage became accepted as desirable only in the 20th century, most countries of the world now profess to accept the right of all adults to vote freely in national elections. In Britain successive REFORM BILLS in the 19th century ensured suffrage for adult males, but not until 1928 were women over 21 finally allowed to vote; Swiss women did not obtain suffrage in federal elections until 1971. See also pp.1640–1641, 1640–1641, 1644.

Suffragette movement, campaign of women in Britain in the late 19th and early 20th centuries to win for women the right to vote. It began in the 1860s, and developed until the founding of the National Union of Women's Suffrage Societies in 1897. Emmeline PANKHURST founded the Women's Social and Political Union in 1903. By 1910 the movement had split into several factions, including the Women's Freedom League (1908). In 1913 Sylvia Pankhurst founded the East London Federation, which organized mass marches in London. Women of the age of 30 and over were given the vote in 1918.

Sufism, mystic philosophical movement

within ISLAM which developed among the SHI'A communities in the 10th and 11th centuries. Sufis stress the capability of the soul to attain personal union with God. Orders within Sufism include the DERVISHES, who attain this union by ecstatic trances and dancing. The finest examples of classical Persian poetry were written by Sufi devotees, the most famous being OMAR KHAYYAM, RUMI and HAFIZ.

Sugar, sweet-tasting soluble crystalline monosaccharide or disaccharide CARBOHYDRATE. The common sugar used in food and beverages is the disaccharide SUCROSE. See also GLUCOSE; p.906.

Sugar Act, or Revenue Act (1764), British legislation imposed on the American colonies to halt smuggling of foreign sugar. The Act reduced the duty on imported molasses and increased duties on refined sugar from England, effectively giving British West Indian sugar producers a monopoly of the American market. It caused much resentment among the Americans and contributed to the War of AMERICAN INDEPENDENCE. See also p.1540.

Sugar-beet, variety of BEET grown commercially for its high SUGAR content, which is stored in its thick white roots. Species *Beta vulgaris*. See p.684, 692, 693.

Sugar cane, perennial GRASS cultivated in tropical and subtropical regions throughout the world. After harvesting, the stems are processed in factories, becoming the main source of SUGAR. Most cultivated canes are *Saccharum officinarum*. Height: to 4.5 m (15 ft). Family Gramineae. See pp.380, 692–693.

Sugar glider, small arboreal marsupial. It can glide up to 55 m (180 ft) using the flap of skin between its fore and hind legs. Length: to 80 cm (32 in). Family Petaurus. See also p.91.

Sugar maple. See MAPLE.

Suger, **Abbot** (1081–1151), French cleric who helped to strengthen the French monarchy against the decentralizing forces of feudalism. As adviser to Louis VI and as regent when Louis VII left on the Second Crusade, he devoted his energies to upholding strong central government. He is famous for having commissioned the abbey church of St Denis, built in a new style which became known as Gothic.

Suggestion, in HYPNOSIS, imposition or implanting of notions or ideas in the memory of the hypnotized subject.

Su Han-chen (fl. 12th century), Chinese painter who was best known for his pictures of children.

Suharto (1921–), Indonesian military and political figure. A lieutenant-colonel in a guerrilla army that fought for independence from the Dutch (1945–49), Suharto seized power from President SUKARNO in 1966. He was formally elected President in 1968 by the Consultative Congress and was re-elected in 1973.

Suhrawardi, **as-** (c. 1155–91), Iranian-born Islamic philosopher and theologian. His thinking is still in evidence in Iran today among mystical sects, including the Nurbakhshtiyah, itinerant holy men who trace the origin of their order to him. His principal work is *Hikmat al-ishraq* (*The Wisdom of Illumination*). He was killed by Malikaz-Zahir, the son of Saladin.

Suicide, intentional act of terminating one's own life; also a person who does so. Although most suicide attempts are committed by females, males are about twice as successful in completing the act. Suicide rates per 100,000 population vary from fewer than 3 in Mexico to about 11 in Great Britain, 15 in the USA, 20 in France and Sweden and 40 in Hungary. See also pp.1080, 1840.

Sui dynasty (581–618), Chinese dynasty whose two rulers (Yang Chien and Yang Kuang) re-established strong central rule in China following more than 250 years of division and contention. The Grand Canal was completed, the GREAT WALL OF CHINA re-fortified and many towns beautified, all at great human cost in taxation and forced labour. After defeat at the hands of Eastern Turks (615), the Sui dynasty was overthrown and succeeded by the T'ANG. See also pp.1257, 1257.

Suite, musical form comprising a number

of instrumental dances, which differ in metre, tempo, rhythm and mood but are generally all played in the same key. The earliest suites date from the 16th century and involved usually only two dances: the PAVANE and GALLIARD, which were played to open ceremonial balls. By the 18th century the dances included in the form had become standardized: a prelude was followed by an allemande, courante, sarabande and gigue. Within this structure, however, there was some flexibility and the minuet, gavotte, bourrée and rondeau were often added. The suite was a popular form of composition in the Baroque era and outstanding composers included LULLY, RAMEAU, CORELLI, PURCELL, COUPERIN and J. S. BACH, who wrote the six *French Suites* and six *English Suites* for harpsichord.

Sukarno, Achmad (1901–70), Indonesian politician, President from 1947 to 1967. A leader of his country's independence movement, he was jailed by the Dutch and exiled (1933–42). When the Japanese invaded Indonesia during WWII, he co-operated with them and at the end of war became the first President of INDONESIA. In 1966 anti-Communist Indonesian military leaders forced a reduction of his powers, and he was deposed in 1967.

Sukkoth, or Sukkat, Jewish festival of tabernacles, which lasts for seven days. It commemorates the wandering of the Jews in the desert and their salvation through God. A sukkat, or simple tent, is raised in the synagogue (formerly in all Jewish homes).

Sukkur, city in w Pakistan, on the River Indus approx. 360km (225 miles) NNE of Karachi. It is the site of the Sukkur barrage across the Indus which controls one of the largest irrigation schemes in the world, watering more than 2 million hectares (5 million acres). Built between 1923 and 1932, the dam is approx. 1,520m (5,000ft) long. Industries: textiles, foodstuffs. Pop. (1972) 158,876.

Sulawesi. See CELEBES.

Suleiman I, or Suleyman the Magnificent (1494–1566), OTTOMAN sultan (r. 1520–66), son and successor of SELIM I. He extended his father's conquests in the Balkans, the Mediterranean and Asia, captured Belgrade (1521), expelled the KNIGHTS HOSPITALIERS from Rhodes (1522) and defeated the Hungarians under LOUIS II at MOHACS (1526). After the death of JOHN I of Hungary (1540) he annexed much of the country. He made an alliance with FRANCIS I of France against the HAPSBURG (1536) and his admiral, BARBAROSSA, ravaged the coasts of Spain, Italy and Greece. His Turkish fleet was to control the Mediterranean until 1571. It took Tripoli in 1551 but failed to take Malta. His campaigns against Persia completed the conquest of Iraq and the area around Lake Van. He died during the siege of Szeged (Hungary) and his son SELIM II succeeded him. See also pp. 1354–1355, 1355.

Sulla, Lucius Cornelius (138–78 BC), Roman general and statesman who brought the Jugurthine war with NUMIDIA to an end through diplomacy. He was appointed consul in 88 and dictator in 82. He instituted constitutional changes and reformed the courts, but most of his reforms were reversed soon after his retirement (79). See also pp. 1226, 1230, 1230.

Sullivan, Sir Arthur Seymour (1842–1900), British composer famous for a series of operettas written with William GILBERT. They included *H.M.S. Pinafore* (1878), *The Pirates of Penzance* (1879) and *The Mikado* (1885). Sullivan also composed one opera *Ivanhoe* (1881), oratorios, cantatas, and church music including many hymns such as *Onward, Christian Soldiers*. His non-vocal music includes overtures, a cello concerto (1866) and piano music.

Sullivan, James ("Jim") (1903–), British rugby league full-back for Great Britain and Wigan. He scored 5,578 points in first-class matches, made three tours of Australia, and played in 25 Tests (1924–34). As a coach he produced outstanding teams for Wigan and St Helens.

Sullivan, John Lawrence (1858–1918), US boxer, who defeated Jake Kilrain in 1889 in Richburg, Missouri, in the last bare-knuckle heavyweight championship bout.

Sullivan, Louis Henry (1856–1924), US architect, a founder of the Chicago School. He believed the exterior forms of buildings should relate to their functions and opposed the Classical revival dominating the later 19th century. Most of his best work was undertaken in partnership with Dankmar Adler (1881–1900). The Wainwright Building in St Louis (1890); which, with its brick-clad steel framework, was the first skyscraper) and the Transportation Building at the 1893 World's Exhibition in Chicago are among his best-known works. See also p. 1631.

Sully, Maximilien de Béthune, Duc de (1560–1641), French Minister and financier under HENRY IV. A HUGUENOT, he narrowly escaped the Massacre of St BARTHOLOMEW'S DAY (1572), and later served the Protestant Henry of Navarre in his struggle for the throne. Once crowned as Henry IV, the King employed Sully as his most trusted counsellor.

Sully-Prudhomme, René-François-Armand (1839–1907), French poet associated with the PARNASSIANS. His early verse is subjective and melancholic. His chief works are two long philosophical poems, *La Justice* (1878) and *Le Bonheur* (1888). In 1901 he was awarded the first Nobel Prize in literature.

Sulpha drugs, class of drugs, often called sulphonamides, extremely effective against bacterial infection. The first sulpha drug, a red dye called PRONTOSIL, was discovered by Gerhard DOMAGK in 1932.

Sulphapyridine, one of the sulphonamides, or SULPHA DRUGS. It was first used in 1937 to treat bacterial infections and showed greater activity than any previous drug of this type. But its poisonous effects, particularly on the kidneys, gradually led to its disuse; it was replaced by other sulpha drugs and by PENICILLIN.

Sulphate. Salt of SULPHURIC ACID, H_2SO_4 . **Sulphation**, formation of a salt or ESTER of SULPHURIC ACID. The term is frequently used to denote an undesirable side-effect as in the formation of lead sulphate in a car battery.

Sulphide, chemical compound derived from hydrogen sulphide, H_2S , in which another element or group replaces the hydrogen. An inorganic example is lead sulphide, PbS , which occurs as the mineral GALENA; an organic example is ethyl mercaptan, C_2H_5SH .

Sulphonation, introduction of a sulphonic acid group, $-SO_3H$, into a molecule, widely used in the manufacture of dyes, SULPHA DRUGS etc. Many detergents are manufactured by sulphonation of a HYDROCARBON.

Sulphonic acids, organic chemical compounds having the general formula RSO_3H , where R is a HYDROCARBON group. Examples are ethane sulphononic acid, $C_2H_5SO_3H$, and benzene-sulphonic acid, $C_6H_5SO_3H$. Sulphonic acids are used as chemical intermediates and their salts, the sulphonates, are widely used in DETERGENTS.

Sulphur, non-metallic ELEMENT in group VIA of the PERIODIC TABLE, known since prehistory. It may occur naturally as a free element, or in sulphide minerals such as GALENA and IRON PYRITES or in sulphate minerals such as GYPSUM. The main commercial source is native (free) sulphur, extracted by the FRASCH PROCESS. Sulphur is used in the VULCANIZATION of rubber and in the manufacture of drugs, dyes, fertilizers, etc. Properties: at no. 16; at wt. 32.064; s.g. 2.07 (rhombic), 1.957 (monoclinic); m.p. 112.8°C (235.0°F) (rhombic), 119.0°C (246.2°F) (monoclinic); b.p. 444.6°C (832.3°F). Most common isotope S^{32} (95.1%).

Sulphur dioxide, colourless, poisonous gas, formula SO_2 , with a pungent odour. It is used in the manufacture of SULPHURIC ACID and as a refrigerant, bleaching agent and preservative. Properties: m.p. $-75.5^\circ C$ ($-103.9^\circ F$); b.p. $-10.0^\circ C$ ($14.8^\circ F$); density 2.2 (air = 1).

Sulphuric acid, or oil of vitriol, colourless, poisonous gas, formula H_2SO_4 , one of the

strongest acids known. It is used in the manufacture of fertilizers, drugs and a wide range of chemicals. Properties: m.p. $10.3^\circ C$ ($50.5^\circ F$); s.g. 1.84.

Sulphur trioxide, inorganic compound, SO_3 , the anhydride of SULPHURIC ACID, it reacts with water to make the acid. At room temperatures it can exist either as a liquid or as a solid. It further dissolves in sulphuric acid to make fuming sulphuric acid, or oleum, $H_2S_2O_7$.

Sultan, Tuanku Yahya Petra ibni Al Marhum Sultan Ibrahim (1917–), ruler of the state of Kelantan, elected by the rulers of the nine Malay states as the Supreme Head of State of Malaysia in Sept. 1975.

Sumac, any of the shrubs and trees of the genus *Rhus*, widely distributed in temperate regions. They have long feather-like leaves and red, hairy fruit clusters. Some species are poisonous to touch. Height: to 9m (30ft). Family Anacardiaceae. See also

Sumatra (Sumatera), island in w Indonesia; second-largest of the Greater Sunda group. The w coast is rugged and mountainous, the Barisan Mountains rising to 3,810m (12,500ft). Sixty per cent of the lowland area is jungle. By the 7th century, India had established two states in Sumatra – Melayu and Srivijaya. The Portuguese landed on the island in the 16th century and the Dutch followed a century later. Britain held certain parts of the island briefly in the 18th and 19th centuries. Sumatra became part of Indonesia in 1950. The principal cities are Palembang, Medan and Padang. Exports: rubber, tobacco, palm oil, tea, coffee, sisal. Mining and farming are the chief occupations. Area: 473,970sq km (183,000sq miles). Pop. (1971) 20,812,700.

Sumer, the southern region of ancient MESOPOTAMIA, later the southern part of BABYLONIA, now south central Iraq. An agricultural civilization flourished in the area during the 3rd and 4th millennia BC. The Sumerians built canals, established an irrigation system, and were skilled in the use of metals, such as silver, gold and copper, and in the making of pottery, jewellery and weapons. They are credited with the invention of the CUNEIFORM system of writing. Several kings founded dynasties at Kish, Erech and Ur and were able to control large areas of land. SARGON of Akkad brought the region under the SEMITES c. 2600 BC, and the two cultures merged. The final Sumerian civilization at Ur fell to tribes from ELAM, and the Sumerian nation disappeared completely when it was brought under the control of Hammurabi and Semitic Babylonia. See also pp. 1160–1165.

Sumerians, inhabitants of SUMER, the most southerly part of ancient BABYLONIA and the site of an ancient civilization, the origins of which can be traced back to the 3rd millennium BC. The Sumerian language is the oldest written language. The Sumerians developed a remarkably sophisticated artistic culture and technology, which is represented in surviving artifacts and buildings as well as canals and dams. Their religious practices were centred on a pantheon consisting of many deities, each with special qualities. See also pp. 1160, 1161, 1162–1163, 1162–1163.

Sumer is icumen in (13th century), English song and the earliest known vocal composition for six voices. It is one of the most important primary source documents of the time for musical scholarship.

Summa Theologica (1266–73), scholastic treatise by St Thomas AQUINAS. In this work Aquinas attempted to reconcile Aristotelianism with faith and revelation, acknowledging both as equal and complementary routes to truth. See also pp. 1322–1323.

Summation, in mathematics, finding the total, as of a column, sequence or array of numbers, or of an infinite series of terms. The sum of all the terms of an infinite series is a finite quantity if the series is convergent (if successive terms are smaller); if the series is divergent (if the terms get larger), the sum will be infinite. The symbol Σ (sigma) is used to indicate a summation.

Sukarno in 1966 at the time of an abortive coup d'état against his regime.

Louis Sullivan; the Gage building in Chicago, which he built between 1898–99.

De Béthune Sully received 300,000 livres when he resigned on Henry IV's death.

Sumatra; a rubber tapper cutting a strip of bark, from which latex then flows.

Summer

Sumo wrestling; two champions during a tournament in Tokyo, in 1956.

Sumter; the fort under attack from Confederate forces in 1861.

Sun bears are adept at climbing and spend most of their day in the tops of trees.

Sunbird; males seldom help females build nests but pairs stay together all year.

Summer, warmest of the four seasons of the year, experienced in all latitudes outside the tropics, during which plant growth and animal populations are generally at their height. In the northern hemisphere the summer solstice extends from 21 or 22 June to 22 or 23 September. In the southern hemisphere the period is from 22 or 23 December to 20 or 21 March.

Summer time, also called daylight saving scheme, the system by which clocks in Britain are kept one hour ahead of GMT (Greenwich mean time) throughout the summer. Other countries, including Italy, have similar daylight saving schemes.

Summit meeting, term meaning the meeting of heads of state or their senior representatives to discuss an urgent point at issue between them. Although such meetings are age-old, the term was first applied to the Geneva summit of July 1955, attended by Nikita Khrushchev, Dwight D. Eisenhower, Anthony Eden, Edgar Faure and Nikolai Bulganin.

Summons, in criminal law, notice presented to a person requiring him to attend court to answer a criminal charge. In civil law it is a writ commencing an action and states the nature of the claim.

Sumner, James Batcheller (1887–1955), US biochemist who shared the 1946 Nobel Prize in chemistry with John Northrop and Wendell Stanley for his discovery that ENZYMES could be crystallized. In 1926 Sumner isolated and crystallized the enzyme urease; it was the first enzyme to be crystallized and this achievement finally proved the protein nature of enzymes.

Sumner, William Graham (1840–1910), US sociologist and anthropologist, one of the founders of US sociology. He was ordained an Episcopal clergyman but preferred to teach political and social science at Yale University (1872–1909).

Sumo wrestling, traditional and popular sport of Japan. Wrestlers, who usually weigh more than 159kg (350lb), oppose each other in a match that is quasi-religious in nature and is fought with much ritual. The matches begin from a crouch position on the mat and are generally of brief duration. The object is to force the opponent out of the circular ring. The technique resembles the Western catch-as-catch-can method of wrestling, with a series of holds, trips and falls employed to overcome an opponent. See also WRESTLING.

Sumter, Fort, fort in S Carolina, USA, on the S shore of Charleston harbour. The attack on it in Apr. 1861 by the CONFEDERATE STATES marked the beginning of the AMERICAN CIVIL WAR.

Sun, yellow dwarf star at the centre of the SOLAR SYSTEM; one of approx. 100,000 million stars that make up our GALAXY. It is situated in one of the spiral arms, some 32,000 light-years from the galactic centre. Of spectral type G2, the Sun is composed mainly of hydrogen and helium, and has a diameter of 1,392,000km (865,000 miles). Its mass is approx. 333,000 times that of the Earth. The outer surface, or PHOTOSPHERE, of the Sun has a temperature of 5,500°C. The Sun is a source of light, infra-red and ultra-violet radiation as well as radio waves, gamma-rays and X-rays. The temperature at the Sun's core is approx. 10 million degrees centigrade and it is there that the Sun's energy is generated. Characteristics: apparent mag. -26.8; absolute mag. 4.7; distance: 149,596,000km (92,750,000 miles). See also pp.849, 922, 924, 925–926, 926–927, 968, 972–978, 972–978, 981, 996, 996.

Sun animal. See HELIOZOEA.

Sun bear, small omnivorous bear found in SE Asia; it is the smallest species of bear in the world. It has a short black coat with a crescent-shaped yellow mark on its chest and a light grey or orange muzzle. Its diet consists primarily of insects, such as bees and termites, but it also eats honey, fruit and small vertebrates. Length: to 1.2m (4ft); weight: 45kg (100lb). Family Ursidae; species *Helarctos malayanus*. See also p.1894.

Sunbird, tropical nectar-feeding songbird of the Old World, often considered a counterpart of the New World humming-

bird. The males are usually brightly coloured. After the male's courtship display, the female builds a purse-like nest with a porch. Length: 9–15cm (3.5–6in). Family Nectariniidae. See also p.81.

Sunburn, burning of the skin caused by ultraviolet radiation from the sun. Redness, swelling, blisters and pain are associated with destruction and coagulation of some of the substances in the cells of the skin, along with enlargement of small vessels beneath the EPIDERMIS. In severe cases, large blisters and ulcers may form, accompanied by fever and delirium.

Sunda Islands, group of islands in Indonesia; part of the Malay Archipelago, between the South China Sea and the Indian Ocean. The Greater Sundas includes Sumatra, Java, Borneo and the Celebes (Sulawesi). Pop. (1970) 112,138,700. The Lesser Sundas include Bali, Lombok, Sumbawa, Flores and Timor. Pop. 6,999,000.

Sun dance, religious activity of the North American Plains Indians. The dances took many forms and were usually performed around a TOTEM POLE. They were part of elaborate ceremonies held to reaffirm a tribe's affinity with nature and the universe. Sometimes the dancers would inflict self-torture in the efforts to experience religious visions.

Sunday, the first day of the week, anciently dedicated to the Sun. It is observed by most Christians as the sabbath or day of rest and worship commemorating the resurrection of Christ. In Western countries it is a public holiday.

Sunday schools, institutions run by religious or Church organizations for free instruction in religious and moral matters. The first school was founded by Robert Raikes in 1780 and the idea quickly spread. In 1803 the London Sunday School Union was founded to promote the movement, which grew rapidly in the Protestant churches of Britain and North America.

Sunderland, county district in SE TYNE AND WEAR, England; created in 1974 under the Local Government Act (1972). Area: 138sq km (53sq miles). Pop. (1979 est.) 300,800.

Sundew, INSECTIVOROUS PLANTS native to temperate swamps and bogs. They have hairy, basal leaves that glisten with a dew-like substance to attract, trap and digest insects. When the hairy projections are touched, the leaves close to trap the insect. Family Droseraceae; genera *Aldrovandra*, *Dionaea*, *Drosera* and *Droserophyllum*. See also p.371.

Sundial, instrument first used about 5000 years ago in the Near East to measure the time of day. Traditionally a sundial is a short flat-topped pillar on which is mounted the gnomon, or time pointer. This slants upwards away from the dial at an angle determined by the latitude; also it points due north in northern latitudes and south in southern. The position of the shadow of the gnomon indicates the time on a scale marked round the top of the sundial. See also p.453.

Sun dog, or parhelion, also called mock sun, name for either of two bright coloured spots observed at 22° on each side of the Sun. They are caused by REFRACTION of sunlight by ice crystals in the Earth's atmosphere.

Sunfish, North American freshwater fish. A popular angler's fish, similar in appearance to PERCH, it has a continuous dorsal fin containing spiny and soft rays. It is a nest-building fish and the male guards the nest and young. The 30 species range in size from the blue spotted *Enneacanthus gloriosus* (length: 8.9cm; 3.5in) to the large-mouth bass *Micropterus salmoides* (length: 81.3cm; 32in; weight: 10kg; 22lb). Family Centrarchidae.

Sunflower, coarse annual and perennial plant native to North and South America. The flower heads which turn to face the Sun, resemble huge daisies with yellow ray flowers and a centre disc of yellow, brown or purple. The common sunflower (*Helianthus annuus*) has 30cm (1ft) leaves and flower heads more than 30cm across; Height: to 3.5m (12ft). See also p.713.

Sungari (Songhuajiang), river in NE

China. It rises in the Changpai Mts, Kirin province, near the North Korean border, and flows N to the River Amur at the USSR border. It is navigable for most of its 1,850km (1,150 miles).

Sung Dynasty (960–1279), Chinese dynasty. Divided into the Northern (960–1126) and Southern (1127–1279) Sung by the Jurchen conquest and establishment of the Chin Dynasty in the North, it was a period of refinement and cultural flowering in China. Southern ports were opened for trade with South Asia.

Sunglasses, spectacles with dark or tinted "lenses" that protect the eyes of the wearer by absorbing some of the Sun's light and heat radiation. The simplest sunglasses are tinted sheets of glass or plastic, either worn as spectacles or clipped over the wearer's own spectacles. "Polaroid" sunglasses remove glare from sunlight by plane-polarizing it. Some modern lenses turn dark automatically when exposed to sunlight. See also POLARIZED LIGHT; p.893.

Sung Yu (fl. 3rd century BC), Chinese poet. Writing towards the end of the CHOU DYNASTY he made major contributions to the development of the *fu*, prose poems especially popular in the HAN DYNASTY. He is reputed to have written the poem *The Summons of the Soul*, which tells of the wandering soul.

Sunni, orthodox rite of ISLAM, whose followers are called Sunnis or Sunnites. It is one of the two main sects of the religion, including 90% of all Muslims and finding authority in the entire Sunna or body of orthodox teachings outside the KORAN. The Sunni differ from the SHI'A sect, who believe in the inspired leadership of a succession of imams, and are divided among four schools of thought: the Hanafites, Malikites, Shafites and Hanbalites.

Sunspots, short-lived dark areas, often several thousand kilometres across, that appear periodically on the Sun's PHOTOSPHERE and travel from one side of the Sun's disc to the other as the Sun rotates. They have a dark centre (umbra) surrounded by a brighter border (penumbra), and are associated with strong magnetic fields. They appear dark because they are about 2,000°C cooler than the surrounding regions. Sunspots occur in groups, and maximum sunspot activity usually occurs every 11 years. Scientists believe sunspot activity has an effect on Earth's weather, linking it, for example, to the onset of the Ice Ages. See also pp.972–973, 976.

Sunstroke, disorder caused by over-exposure to direct sunlight or to hot air in poorly ventilated places. A victim's temperature will rise quickly and may reach 41°C (106°F) or more; the skin is hot and dry, with no perspiration. The high temperature has a harmful effect on the central nervous system that, in severe cases, may result in convulsions and coma. Treatment includes means of lowering body temperature and complete rest, and saline fluids and sedatives may also be prescribed.

Sun Yat-sen (1866–1925), first President of the Chinese Republic (1911–12) and revolutionary leader of modern China. After China's defeat by Japan in 1895 Sun became convinced that the Manchu dynasty must be overthrown. In exile (1895–1911), he worked through secret societies and with support from overseas Chinese to bring about his aim. His inspiration eventually brought about the revolution of 1911. He joined in reorganizing the KUOMINTANG (1912) and became its leader and ideologist. See also pp.1622–1623.

Superalloys, name given to ALLOYS of cobalt and nickel used as surface materials for spacecraft to withstand the rapid heating and high temperatures caused by passage through the Earth's atmosphere, particularly on re-entry from space. These alloys oxidize in air above 700°C (1,300°F) but the oxide coating initially formed prevents further oxidation. See also ABLATION.

Supercluster, galaxy. See GALAXY CLUSTER. **Superconductivity**, extraordinary electrical behaviour in metals and alloys that are cooled to temperature approaching ABSOLUTE ZERO. In a supercooled circuit an

electric current flows indefinitely, there being no electrical resistance. The highest temperature at which this can occur is about 18°K, or -255°F (-427°F), the maximum superconducting temperature of a niobium-tin alloy. See also p.847.

Superego, in psychoanalysis, level of personality that sets standards of behaviour. A child starts with the unthinking impulses of the ID. The ego develops as he learns to deal with reality. Then the superego, or his conscience, develops as he adopts standards determined by society's rewards and punishments. See also pp.1063, 1162.

Superfluidity, extraordinary physical behaviour shown by the element helium when it is cooled below -271°C (-456°F). At these temperatures, helium (referred to as helium II to distinguish it from helium I, or normal helium) is a liquid which has little or no viscosity and flows into and out from any vessel until the levels inside and outside are the same. See also p.847.

Supergiant star, largest, most massive and most luminous type of star so far discovered. Supergiants, characterized by low densities, lie at the top of the HERTZSPRUNG-RUSSELL DIAGRAM, above the giants; except for the brightest, they occur throughout the entire surface-temperature range. Red supergiants are often long-period or irregular variables. See also pp.978-979.

Superheterodyne receiver, most common type of RADIO receiver. An oscillator produces signals of varying frequency such that the difference between them and the frequencies of the incoming modulated carrier waves - the broadcast signal - is a constant, called the intermediate-frequency (i-f). The "i-f" can then be amplified and demodulated to produce the output signal for the loudspeaker.

Superior, Lake, lake in the USA and Canada; largest freshwater lake in the world. The lake is connected to Lake HURON and the ST LAWRENCE SEAWAY by the SAULT STE MARIE CANALS. A centre for commercial and recreational fishing, the lake is also a major commercial transportation route, particularly for grain and iron ore. Superior was discovered in 1622 by Étienne Brûlé. Area: 82,362sq km (31,800sq miles).

Supernova, star that undergoes a cataclysmic outburst of energy and matter as the result of internal imbalances caused by the exhaustion of its fuel. These imbalances, which may occur in stars beyond a certain critical mass, take the form of accelerated nuclear reactions in the core, enormously increased internal temperature (up to 5,000 million °K) and gravitational collapse. The catastrophic explosion that follows, in which the star blows itself apart and ejects matter at relativistic speeds, temporarily increases its absolute magnitude to a figure in excess of -16, the brightness of a whole galaxy. These spectacular but also extremely rare phenomena usually leave behind a filamentary remnant, such as the Crab Nebula, and the original core may survive as a neutron star or PULSAR, or even as a BLACK HOLE. See also pp.980-981.

Superposition, law of, in geology, law that states that in undisturbed strata of sedimentary deposits, younger beds overlie older ones. The law determines the corresponding time equivalence of two geographically distinct formations.

Superscript, small letter, number or other symbol written or printed above and to the left or right of a number, letter or symbol, as indicating a mathematical exponent, such as 3² or xⁿ, or an element's mass number, as U²³⁸. See also SUBSCRIPT.

Supersonic flight, flight beyond Mach 1, the speed at which sound travels at a particular temperature and pressure. At sea-level 1,223km/h (760mph) is the critical speed. At high altitude the speed might be 1,662km/h (660mph). At these speeds the pressure wave that normally moves away from an aircraft is compressed, creating a cone-shaped SHOCK WAVE. Early attempts to fly through this barrier were unsuccessful. Swept-wing, slender-bodied aeroplanes fly at supersonic speeds by retard-

ing the formation of the wave. See also pp.517, 572.

Supersonic waves, waves set up in the air by any object moving at speeds exceeding the speed of sound. At sea level, sound travels at about 1,240km/h (770mph), and at an altitude of 10,000m (32,800ft) it is about 1,000km/h (620mph). At these speeds, air waves created by the object's passage pile up at the leading edges of the object into a SHOCK WAVE. An observer on the ground sees a supersonic aeroplane pass overhead before he experiences the shockwave, which spreads out and reaches him as a sonic boom.

Superstition, irrational belief in the inevitable consequences of certain events, which can sometimes be avoided by the performance of counteractive rituals (such as throwing spilt salt over one's left shoulder). Superstition is not specifically linked to religion but is rather connected to ideas of an all-embracing fate and therefore has affinities with astrology.

Suppé, Franz von (1819-95), Austrian composer of Belgian descent, b. Francesco Ezechiele Ermenegildo Cavaliere Suppé Demelli. He composed 31 operettas, the best of which include *Fatinitza* (1876) and *Boccaccio* (1879).

Supplementary Benefits. See SOCIAL SECURITY.

Supply and demand, law of, economic balance between goods required and produced. The law of supply indicates that, other things being equal, as the price of an item increases suppliers are willing to produce more, and as the price decreases producers are willing to produce less. Thus, price and quantity supplied are directly related. The law of demand states the reverse: as prices increase, consumers demand less, and as prices decrease, consumers demand more. Thus, prices and quantity demanded are inversely related. Through the interaction of supply and demand, an EQUILIBRIUM is reached. See also pp.1862, 1863.

Suprarenal glands, another name for the ADRENAL GLANDS.

Supremacy, Acts of, two acts passed by the English Parliament in the 16th century. The first (1534) made the monarch the "supreme head" of the Church of England. It thus made the English Church independent of the papacy and also made it subject to temporal authority. The second act (1559) changed the title from supreme head to "supreme governor", thus signifying that authority was vested, not so much in the person of the monarch as in the Crown-in-parliament.

Suprematism, abstract art movement launched in Russia in 1915 by the painter Kasimir MALEVICH. The movement stressed the simplest geometrical forms and is epitomized by Malevich's painting *White on White* (1919).

Supreme Court (Canada), highest court of appeal in Canada, established in 1875. Its judgement became final when appeals to the Judicial Committee of the Privy Council in London were ended - for criminal cases in 1933, for civil cases in 1949. It sits in Ottawa and is composed of a chief justice and eight associated judges. In addition to hearing appeals, it advises the federal government and provincial governments, when asked, on matters requiring constitutional interpretation. Recent decisions in appeal judgements show a tendency to move away from English judicial practice towards that of the USA.

Supreme Court of the United States, US court of final appeal, the highest in the nation, whose duty it is to decide and interpret the constitutionality of state and federal legislation and of executive acts. Once the Supreme Court has arrived at a decision, all lower courts must follow it in similar cases. Cases are decided by majority vote. Created by the Constitution of 1787, the Supreme Court is made up of nine justices appointed for life by the president with the advice and consent of the Senate. A justice may be removed from office only by impeachment. The chief justice presides over all sessions, five judges constituting a quorum.

Supreme Court (USSR), highest court in the

USSR, established in 1922. It not only hears appeals, but acts as the general coordinator of policy in the provinces, issues rulings interpreting the various legal codes of the country and, occasionally, hears cases in the first instance. It is subordinate to the legislature and has no power to declare laws unconstitutional or to check executive action.

Surabaya, port in NE Java, Indonesia, at the W end of the Madura Strait; second-largest city in Indonesia and capital of East Java province. It was an important naval base until WWII, when it was occupied by the Japanese. The city has Airlangga University (1954) and a naval college. Exports: rice, sugar cane, spices, tobacco, maize, tapioca, coffee, cocoa, rubber, copra. Pop. 1,273,000.

Surface tension, molecular forces associated with the boundary layer of a liquid. It makes a liquid behave as if there were a "skin" on the surface. Cohesive forces in the skin tend to resist disruption, so that a needle or razor blade placed carefully on the surface "floats" even though its density is many times that of the liquid. See also p.839.

Surfactant, substance that lowers the SURFACE TENSION of a solvent in which it is dissolved. In water, soaps and detergents act as surfactants. Their molecules concentrate at the surface of oil and water molecules and act as emulsifying or foaming agents, to produce lathering and frothing. See also pp.580-581, 580-581.

Surfing, water sport that consists of riding the surf on a specially designed board usually 1.2-1.8m (4-6ft) long. For stronger waves, larger boards (up to 3.7m, 12ft) are used. The technique is to swim out to sea and then wait for a wave before standing on the board and planing back to shore on the wave before it breaks. Surfing originated in Hawaii, and there are now national and international competitions in various parts of the world.

Surfperch, or seaperch, several species of fish which bear their young live and are found mostly off the Pacific Coast of North America. Length: to 45cm (18ins). Order Perciformes; family Embiotocidae.

Surgery, treatment of a disorder by manipulation or operation, usually performed by a surgeon and often using some form of ANAESTHETIC. A doctor's or dentist's consulting room is also known as a surgery.

Surinam, independent country in NE South America, on the Atlantic Ocean. Formerly Dutch Guiana or Netherlands Guiana, it gained independence in 1975. Rice, bananas, coffee, sugar cane, groundnuts, coconuts and citrus fruits are the chief crops. Bauxite is the principal export, and food processing and timber are the main industries. Paramaribo is the capital. Area: 163,265sq km (63,037sq miles). Pop. (1975 est.) 350,000. See p.2143.

Surinam toad, South American aquatic tailless AMPHIBIAN. It is brown with a flat, square body. The female carries fertilized eggs embedded in the skin on her back; the larvae remain there until metamorphosed. Length: 20cm (8in). Family Pipidae; species *Pipa pipa*. See also FROG; p.65.

Surrealism, influential movement in art and literature, evolved in the mid-1920s from DADAISM. Influenced by Freudian psychology, it represented a reaction against rationalism and advocated creative use of the powers of the unconscious mind. Led by the poet André BRETON, who wrote several Surrealist manifestos, Surrealist writers included LOUIS ARAGON, Paul ÉLUARD, and Benjamin Peret, while painters included Jean ARP, MAX ERNST, René MAGRITTE, Yves TANGUY, Salvador DALÍ, Joan MIRÓ and Paul KLEE.

Surrey, Henry Howard, Earl of. See HOWARD, HENRY, EARL OF SURREY.

Surrey, county in SE England: one of the Home Counties bordering Greater London. The region is traversed from E to W by the North Downs, which slope down to the Thames Valley. The Wey and the Mole are the principal rivers. Much of the land in the W is devoted to farming: dairy and market-garden produce, wheat and oats

Lake Superior; a ship loading grain at Port Arthur, an important outlet.

Supersonic speed; the Anglo-French Concorde, at its first take-off in 1969.

Surfing; many types of surfboard are available but most are made of fibreglass.

Surinam toad females carry fertilized eggs and young on their backs.

Surrogate

are the chief products. There is some light industry. Guildford is the county town but the county council is, for the time being, situated in Kingston-upon-Thames, which is no longer in Surrey. Area: 1,679sq km (648sq miles). Pop. (1979 est.) 993,700.

Surrogate, in psychology, term used to denote a person or thing that is a substitute for another (generally the natural person or object). It may bear no physical relation to the person or object for which it is a substitute. See also **IMPRINTING**.

Surtees, John (1934–), British motorcyclist and motor racing driver, the only man to win world titles at both sports. He was seven times motorcycle champion (350cc 1958–60, 500cc 1956, 1958–60), and won the world racing drivers' championship in 1964. He later became a leading racing-car constructor.

Surtees, Robert Smith (1803–64), British author. His novels of fox-hunting and country life produced one of English literature's memorable characters, the fox-hunting London grocer Mr Jorrocks. From 1831–36 Surtees was editor of *New Sporting Magazine*, which he helped launch and in which his novels were first serialized.

Surveying, accurate measurement of the Earth's surface. It is used in establishing land boundaries, the topography of landforms and for major construction and civil engineering work such as dams, bridges and highways. Measurements are linear or angular, applying principles of geometry and trigonometry. For smaller areas, the land is treated as a horizontal plane. Large areas involve considerations of the Earth's curved shape and are referred to a geodetic surveys.

Surya, in Hindu mythology, the personification of the Sun. He is depicted as a three-eyed, four-armed man of burnished copper, sometimes seated on a lotus or in a chariot drawn by seven horses. See also p.1906.

Susa, ancient city of ELAM, situated on a plain near the River Karun. It was part of BABYLONIA in the reign of Assurbanipal (c.600 BC); ALEXANDER THE GREAT conquered it in 331 BC, obtaining treasures of gold, silver and precious stones. A stele depicting the Code of HAMMURABI was discovered there in 1901–02; it is thought to have been taken from Babylon by an Elamite invader. See also pp.1165, 1193, 1214–1215.

Susanna, in The Bible, woman falsely accused of adultery by two elders and who was proved innocent by DANIEL. Christians treat her story as an allegory of salvation.

Susanowo, in Japanese mythology, brother of Amaterasu-o-Mikami, the sun goddess. Susanowo was an agricultural deity, a fertility god associated with snakes and also the god of thunder and rain. His behaviour was influenced by his dual nature, Ara-mi-tama and Nigi-mi-tama, his evil and good souls.

Su Shih (1037–1101), Chinese poet and prose writer, whose penname was Su Tung-p'o. He was one of the outstanding writers of the SUNG DYNASTY. A master of t'zu, the verse form of irregular length which flourished during the Sung period, he freed it from its previous metrical rigidity to write vigorously about heroism and beauty.

Suspension, liquid medium in which small solid particles are uniformly dispersed. If the particles do not settle out on standing but are unable to pass through a semipermeable membrane the suspension is called a COLLOID. The particle size in such colloidal suspensions is usually in the range 10^{-3} to 10^{-6} millimetres.

Suspension bridge, bridge that has its roadway suspended from two or more cables which usually pass over towers and are anchored at the ends. The cables are of wire twisted spirally, and the floor is usually made rigid by stiffening trusses. The Humber Estuary Bridge, completed in 1980, has a span of 1,410m (4,626ft) and is the longest suspension bridge span in the world. See also pp.534, 534.

Sussex, kingdom of Anglo-Saxon England, said to have been settled by the South Saxons under Aelle (c. AD 477), and covering roughly the area of the modern

county of Sussex. The South Saxons were Christianized (c.680) and afterwards Sussex was divided into several kingdoms, to be incorporated into Wessex in the 9th century. See also pp.1272–1273.

Sussex, former county in SE England, on the English Channel; since 1974 it has been divided into the counties of East Sussex and West Sussex. The area is crossed from E to W by the South Downs. The principal rivers are the Rother, Ouse and the Arun. The county's economy is overwhelmingly agricultural. Dairy and market garden produce, and cereals are the most important products. The Channel coast has many tourist resorts. The county was formerly divided into two administrative districts, West Sussex centred on Chichester, and East Sussex centred on Lewes. Area: 3,773sq km (1,457sq miles).

Susskind, Walter (1913–), British conductor, b. Czechoslovakia. He conducted the Scottish National Orchestra (1946–52) and also held conducting posts with orchestras in Australia (1954–56) and Canada (1956–65) before taking over as chief conductor of the St Louis Symphony Orchestra (1968–75).

Sutherland, Earl Wilbur, Jr (1915–74), US physiologist. He was awarded the 1971 Nobel Prize in physiology and medicine for his work on HORMONES and how they act in the body to control various metabolic processes.

Sutherland, Graham (1903–80), British painter, official War Artist in WWII. His work developed under the influence of Samuel Palmer and may be called SURREALIST in its fantasy and suggestion of menace. In later years Sutherland became known for religious subjects, especially for his huge tapestry for Coventry Cathedral (1962). Acknowledged as a modern master of portraiture, his portraits include those of Maugham (1949), Beaverbrook (1951), and Churchill. The latter was the centre of controversy because Churchill himself detested it, and his wife destroyed it.

Sutherland, Joan (1926–), Australian coloratura soprano. She joined the Royal Opera, London, in 1952 and her performance in the title role of DONIZETTI's *Lucia di Lammermoor* at Covent Garden in 1959 earned her world wide acclaim. She is most famous for her BEL CANTO roles, and has sung in all the famous opera houses. In 1954 she married conductor Richard Bonyng.

Sutherland, former county in NW Scotland, on the Atlantic Ocean; since 1975 it has been part of North West Highlands region. The county is noted for its scenery; it is mostly mountainous and there are many lakes. Much of the interior is moorland which is used for grazing sheep. The region has extensive forests which support deer. Fishing, particularly for salmon, tourism, whisky distilling and the manufacture of woollens are the chief industries. The county town was Dornoch. Area: 5,225sq km (2,029sq miles).

Sutlej (Langtshu), tributary of the River Indus and the longest of the five rivers of the Punjab; rises in SW Tibet, China, and flows W through the Himalayas and the Punjab, where it is joined by the Beas River. The Sutlej continues into Pakistan where, with the Chenab River, it forms the Panjnad, which collects the waters of all five rivers of the Punjab before joining the Indus. Length: approx 1,370km (850 miles).

Sutra, in Buddhism, a sacred text. It is claimed to have been spoken by BUDDHA himself and recorded by his disciple ANANDA immediately after Buddha's death. Many Sutras, however, were composed centuries later by unknown authors. See also p.1265.

Suttee, former Indian custom of a widow throwing herself alive on to her husband's funeral pyre. Originally confined to royalty, it was forbidden under British Rule in 1829. See also DEATH RITES; p.1149.

Suttner, Bertha Felice Sophie, Baroness von (1843–1914), Austrian novelist and free-thinking pacifist. Her novels include *Lay Down Your Arms* (1889) and *Das Maschinenzeitalter* (1899). She was active

in the peace movement, and largely due to her influence, Alfred NOBEL included a Peace Prize among his awards. She herself received it in 1905.

Sutton, Walter Stanborough (1877–1916), US geneticist and doctor. In 1902, while still a student, he provided the first evidence that CHROMOSOMES occur in pairs and that they are responsible for carrying genetic information.

Suva, seaport on the SE coast of Viti Levu Island, in the SW Pacific Ocean; the capital of the Fiji Islands. It is the manufacturing and trade centre of the islands, with an excellent harbour. Exports include tropical fruits, copra and gold. Pop. (1971 est.) 63,200.

Suwon, city in NW South Korea, 29km (18 miles) S of Seoul; capital of Kyonggi province. The trade centre for a farming region, it has several agricultural research institutes. Pop. (1970 est.) 170,500.

Svedberg, Theodor (1884–1971), Swedish chemist who was awarded the 1926 Nobel Prize in chemistry for his development of the ultra-centrifuge in 1923. He used it to study COLLOIDS and large MOLECULES and it enabled the molecular weight of large PROTEINS to be determined for the first time. He also helped to develop ELECTROPHORESIS techniques for separating proteins on the basis of electrical charge. **Svengali**, sinister character in George du Maurier's novel *Tribly* (1894). An Austrian and a brilliant musician, he transforms Tribly into a great singer through hypnosis.

Sverdlovsk. See EKATERINBURG.

Svevo, Italo (1861–1928), pseudonym of Ettore Schmitz, Italian novelist and businessman. His writings were unknown until they were discovered by James JOYCE, who taught him English. They are largely psychological and introspective and include *A Life* (1892) and *The Confessions of Zeno* (1923).

Swabia, historic region of SW West Germany, consisting mainly of the S part of the modern states of Baden-Württemberg and Bavaria. An important duchy in the medieval Germany, it came under the rule of the house of Hohenstaufen from 1079 to 1268. Swabia was divided in 1268 and most of the lordships became free imperial cities by 1313, and formed powerful Swabian Leagues in 1331–37, 1376–88 and 1488–1534. At the diet of Regensburg (1801–03) many areas were incorporated into Baden, Württemberg and Bavaria.

Swahili, BANTU language of the Niger-Congo family of African languages. A lingua franca in most of E Africa with about one million native speakers, it became the official language of Tanzania in 1967 and of Kenya in 1973. It has a large native literature, using a form of the Arabic alphabet.

Swale, county district in central N KENT, England; created in 1974 under the Local Government Act (1972). Area: 369sq km (143sq miles). Pop. (1979 est.) 107,300.

Swallow, any of 75 species of graceful and agile birds with long tapering wings and a long forked tail. The common European swallow (*Hirundo rustica*) is grey blue with a light brown underside and red throat markings; it feeds primarily on insects, which it catches in flight. It often nests in urban areas, and migrates to Africa for the winter. Length: 20cm (8in). Family Hirundinidae.

Swallowtail, any of numerous species brightly-coloured butterflies found throughout the world; they have characteristic tail-like extensions on their hind wings. Most swallowtails are large and black with bright yellow, blue, green and red markings. The yellow and black giant, *Papilio cresphontes*, has a wingspan of up to 14cm (5.5in). Family Papilionidae. See also pp.37, 47, 312.

Swammerdam, Jan (1637–1680), Dutch naturalist. His researches and his book *General History of Insects* provided a system for classifying insects and laid the foundations of ENTOMOLOGY. He also discovered the existence of red blood corpuscles in 1658. See also p.1437.

Swan, Sir Joseph Wilson (1828–1914), British scientist who designed the first

electric light bulb. Starting in 1848 he used a carbon filament inside an evacuated bulb and by 1860, 20 years earlier than Thomas Edison, he had produced a workable bulb, though with a short life-time. His bulbs were used to light the House of Commons in 1881 and the British Museum in 1882.

Swan, any of several species of graceful, white or black waterfowl that nest in N Northern Hemisphere and migrate south for winter. Three species, including the Australian Black swan, live in the Southern Hemisphere. Most have broad, flat bills, long necks, plump bodies, long legs, webbed feet, and dense plumage over down. They dip their heads under water to feed on plant matter. Length: to 1.8m (6ft). Family Anatidae; genus *Cygnus*. See also pp.72, 80.

Swan Lake, four-act ballet with music by TCHAIKOVSKY and choreography by Wenzel Reisinger. It was first performed in 1877, and revised in 1894–95 by Lev IVANOV and Marius PETIP. This version remains in the repertoire of many major ballet companies.

Swanscombe man, earliest known form of *Homo sapiens*, the fragmented skull of which was found in gravels of the River Thames at Swanscombe, Kent, SE England in 1935–36. The bones date from the Mindel-Riss interglacial period, approx. 250,000 to 200,000 years ago. See also pp.114, 1174.

Swansea (Abertawe), city and county district in West Glamorgan, S Wales. The city, on Swansea Bay at the mouth of the River Tawe, is the administrative centre of West Glamorgan and an industrial city, noted for its production of steel, lead and zinc. Pop. (1973) 173,150. The county district was created in 1974 under the Local Government Act (1972). Area: 245sq km (95sq miles). Pop. (1979 est.) 186,900.

Swanson, Gloria (1897–), US film actress b. Josephine Swenson, she became famous for bathing-beauty roles in the silent films of Mack Sennett. Her later films include *Sadie Thompson* (1928), *Indiscreet* (1931), the much-acclaimed *Sunset Boulevard* (1950) and *Airport 75* (1974).

Swarm, gathering of many honey bees around a queen bee, which flies off from a hive to found another colony. This happens when a young queen supplants the old queen, and it is the latter who leads off her retinue in a swarm. See also p.692.

Swart, Charles Robberts (1894–), South African lawyer, journalist and politician. Leader of the National Party of the ORANGE FREE STATE from 1940 to 1959, he was deputy Prime Minister from 1954 to 1959 and State President of the Republic of South Africa from 1961 to 1967.

Swartkrans, archaeological site near Johannesburg, South Africa. Since 1948 remains have been found in a cave there of both *Australopithecines* and of *Homo erectus*. It is the only site where both have been found together. See also pp.111, 112.

Swastika, emblem of the NAZI Party, originally a mystic sign known as the fylfot or the gammadion (so called because its elaborate cross-shaped design resembles four Greek capital gammas set at right-angles). It was used in Byzantine architecture, and also by North American Indians, as a sign to ward off evil spirits (the word "swastika" comes from the Sanskrit *svastika*, "well-being").

Swaythling Cup, trophy for the men's team event at the world table-tennis championships. First contested in 1927, it was donated by Lady Gladys Swaythling whose son organized the first world event in 1926. The event was dominated by the European nations until the 1950s, but it has since been won almost exclusively by teams from China and Japan.

Swazi, negroid people of southern Africa. Mainly agricultural pastoralists, they have a traditionally polygamous society in which power is shared between a hereditary male ruler and his mother (or recognized substitute). Non-Christian Swazis continue to practise ancestor worship and witchcraft.

Swaziland, small, landlocked and moun-

tainous kingdom in s Africa. Most of the people are farmers; sugar is the principal crop and cattle and sheep are reared. Mineral deposits include iron ore, asbestos and coal, and timber is an important industry. In the second half of the 20th century Swaziland has expanded its economy, reducing its dependence on South Africa. Mbabane is the capital. Area: 17,366sq km (6,705sq miles). Pop. (1976 est.) 482,000. See also p.2143.

Sweat, or perspiration, secretion of the sweat glands (sudoriparous glands) of the skin. Sweat is made up of water, mineral salts and traces of UREA. Sweat glands also help to excrete poisons from the body, but the main function of sweat is to cool the body by evaporation. See also p.151.

Sweat shops, factories or home industries in which labourers, often women and children, worked long hours for low wages under unsanitary and cramped conditions. In Britain they were prevalent during the late 19th century.

Swede, root vegetable belonging to the mustard family (*Brassicaceae*). The taproot may be eaten cooked as a vegetable or fed to animals as fodder. Height: approx. 30cm (12in). Species: *B. napobrassica*. See also p.208.

Sweden, constitutional monarchy occupying the E half of the Scandinavian peninsula. It is a highly industrialized nation and one of the most prosperous in Europe. Sweden is a land of lakes, rivers and forests. The most valuable resources are iron ore, timber and hydroelectric potential. The most important industries are shipbuilding and the manufacture of machinery, motor vehicles and electronic and telecommunications equipment. The principal crops are barley, wheat, oats, potatoes and sugar beet. The capital is Stockholm. Area: 449,964sq km (173,731sq miles). Pop. (1979 est.) 6,356,300. See also p.2143.

Swedenborg, Emanuel (1688–1772), Swedish scientist and theologian, whose wide-ranging studies anticipated many later inventions and discoveries. He turned to theological teaching after a spiritual crisis in 1745, when he claimed to have received a revelation of the true meaning of the Scriptures. His writings include *The Economy of the Animal Kingdom* (1740–41) and *True Christian Religion* (1771). Although he did not set out to found a church, a sect, the Swedenborgians, was formed after his death.

Sweeney Agonistes, fragments of an Aristophanic melodrama by T. S. ELIOT, first published in 1932. It is partially a parody of Milton's *Samson Agonistes*, with the protagonists reduced to empty mouthings and sordid assignations in a world too banal for Miltonic heroes.

Sweet, Henry (1845–1912), British philologist and phonetician. He was a pioneer of phonetics research and his writings include *A History of English Sounds* (1874) and *The History of Language* (1900).

Sweetbread, the PANCREAS or sometimes the THYMUS, of a calf or sheep, as food.

Sweetbriar. See EGGPLANT.

Sweet corn. See MAIZE.

Sweetener, artificial. See CYCLAMATES; SACCHARIN.

Sweet pea, climbing, annual plant native to Italy. It has fragrant, butterfly-shaped flowers of white, pink, rose, lavender, purple, red or orange. Height: to 1.8m (6ft). Family Fabaceae; species *Lathyrus odoratus*.

Sweet potato, trailing plant native to South America and cultivated as a vegetable in s Japan, the USSR, USA and the Pacific, including New Zealand (where it is called KUMIA). Its funnel-shaped flowers are pink or violet. The orange or yellow, tuber-like root is edible. Family Convolvulaceae; species *Ipomoea batatas*.

Sweet William, common name for a flowering plant native to Europe. Named after William, Duke of CUMBERLAND, the victor at Culloden, and introduced as a garden plant, it is now a wildflower along roadsides and in waste areas. Its flowers are pink or white. Height: to 60cm (24in). Family Caryophyllaceae; species *Dianthus barbatus*.

Sweyn I Forkbeard (d.1014), King of Denmark (987–1014), son of Harald Bluetooth. His attack on England in 994 forced King ETHELRED II to pay tribute and after his invasion in 1013 Ethelred fled to Normandy and Sweyn became king. Sweyn died before his coronation and his son CANUTE the Great eventually succeeded him. See also p.1285.

Swift, Jonathan (1667–1745), Irish satirist and novelist. He was ordained (1694) an Anglican priest. His early works include *A Tale of a Tub* (1704) on religious and scholarly corruption, and *The Battle of the Books* (1704), ridiculing the controversy over ancient and modern learning. His *Gulliver's Travels* (1726), a satire of human follies, is now read as a story for children. He wrote numerous works criticizing England's treatment of Ireland, including *A Modest Proposal* (1729), which suggested that the children of the poor be fattened and eaten by the rich. See also pp.1467, 1470, 1471, 1478.

Swift, any of several species of fast-flying widely distributed birds; it has a short, sharply-hooked bill, wide mouth, long narrow wings, short weak legs, and darkish plumage. It typically feeds on insects, which it catches in flight, and builds a nest of plant matter held together with saliva, in a chimney or under the eaves of a building. Length: to 23cm (9in). Family Apodidae. See also pp.312, 315, 326.

Swimming, recreational activity and competitive sport. Formal competition was first introduced in 1603 in Japan. The National Swimming Association was formed in England in 1837. By 1908 the Fédération Internationale de Natation Amateur (FINA), the world governing body, was formed. Recognized distances for men and women, established by the federation in 1968, include the 100, 200, 400, 800 and 1,500m freestyle, the 100 and 200m breaststroke, the 100 and 200m butterfly, the 100 and 200m backstroke, the 4 by 100m relay, the 4 by 200m relay (for men), the 200 and 400m individual medley and the 4 by 100m relay medley. For world records, see p.848.

Swinburne, Algernon Charles (1837–1909), British poet and critic. *Atlanta in Calydon* (1865), a poetic drama modelled on Greek tragedy, brought him fame and *Poems and Ballads* (1866) were praised for their infusion of new energy into Victorian poetry. His other poems include *The Garden of Proserpine* (1865) and *The Triumph of Time* (1865). See also p.1576.

Swine fever, disease of pigs caused by a virus and characterized by high temperature and prostration. The disease is usually fatal but in some cases the animals survive and infect other pigs. Swine fever is widespread in Africa, Europe and the USA; it is controlled mainly with anti-hog-cholera vaccinations.

Swing, form of JAZZ, prevalent in the USA during the 1930s and 1940s. It originated in the music of small groups who played a rhythm of four even beats to the bar, as opposed to the two beats to the bar of the New Orleans style. The groups also made more use of soloists, particularly saxophonists such as Coleman HAWKINS, than had the New Orleans ensembles. Larger groups, such as those of Duke ELLINGTON, Fletcher HENDERSON and especially Count BASIE, made great use of the new possibilities. Their innovations were taken up by white musicians such as Benny GOODMAN, the DORSEY brothers and Glenn MILLER, who created successful popular big bands. See also p.1756.

Swinnerton, Frank Arthur (1884–), British novelist and critic. He became famous in 1917 with *Nocturne*, his sixth novel, and since then has written more than 30.

Swinton, Sir Ernest Dunlop (1868–1951), British soldier, author and inventor of the TANK. He served in the SOUTH AFRICAN WAR and WWI and rose to the rank of major-general. He held the chair of military history at Oxford (1925–1939) and wrote several books, some under pseudonyms (Backsight-Forethought or O'le Luk-Oie).

Swiss chard, annual plant, related to BEET,

grown for its spinach-like green or red leaves. The white or red leaf ribs and stems are often cooked separately. Family Chenopodiaceae; species *Beta cicla*.

Swiss Guard, military corps employed in the VATICAN to protect the person of the POPE. It originated during the reign of Pope Julius II (1503–13), who made agreements with the Swiss cantons of Zürich and Lucerne to provide him with 250 guardsmen. They now number about 100 and come from all Swiss cantons.

Swithin (Swithun), Saint (c.800–862), ANGLO-SAXON bishop of WINCHESTER from 852, and adviser to the Saxon kings EGBERT and ETHELWOLF. His tomb in Winchester cathedral became a famous shrine. According to tradition, whatever the weather is on his feast day (15 July) it will remain the same for the next 40 days.

Switzerland, small, landlocked republic in s Europe. The country is noted for its alpine scenery, its manufacture of clocks and watches and as a centre of finance and banking. Switzerland has one of the highest standards of living in Europe. Dairy farming is the chief agricultural activity. The principal industry is the manufacture of precision instruments; others include heavy engineering, pharmaceuticals, steel and tourism. The capital is Bern. Area: 41,288sq km (15,941sq miles). Pop. (1976 est.) 6,333,000. See p.2147.

Swordfish, or broadbill, marine fish found worldwide in temperate and tropical seas. A popular food fish, it is silvery-black, dark purple or blue. Its long flattened upper jaw, in the shape of a sword, is one-third of its length and used to strike at prey. Length: to 4.57m (15ft); weight: 532kg (1,182lb). Family Xiphiidae; species *Xiphias gladius*. See also pp.744, 745.

Swordtail, freshwater tropical fish found from s Mexico to Guatemala. The male of this popular aquarium fish can be identified by a long extension of its tail fin. The young are born alive. The many varieties include red-eyed, red wagtail and berlin swordtails. Length: to 12.7cm (5in). Family Poeciliidae; species *Xiphophorus helleri*.

Sycamore, deciduous tree of the MAPLE family, native to central Europe and w Asia but widely naturalized. Also known as the great maple or false plane, it has deeply toothed, five-lobed leaves, greenish yellow flowers and winged brown fruit. Height to 33m (110ft). Species *Acer pseudoplatanus*. In the USA this name is given to *Platanus occidentalis*, an unrelated species. See also p.377.

Sydenham, Thomas (1624–89), English physician, often called the English Hippocrates. He initiated the cooling method of treating SMALLPOX, made a thorough study of all aspects of epidemics, and wrote descriptions of many diseases including MALARIA, smallpox and GOUT.

Sydney, state capital of New South Wales, SE Australia, on Port Jackson, an inlet on the Pacific Ocean. Sydney is the largest city, the most important financial, industrial and cultural centre and the principal port in Australia. The city was founded in 1788 as the first British penal colony in Australia. Places of interest include the SYDNEY HARBOUR BRIDGE, the Sydney University (1852) SYDNEY OPERA HOUSE and the Australian Museum of natural history. Industries: shipbuilding, textiles, food processing, motor vehicles, oil refining, building materials, chemicals. Exports: wool, wheat, sheepskins, meat. Pop. (1979 est.) 3,193,300.

Sydney Cricket Ground, Australian sports ground used for cricket, rugby league and other games. Cricket Test matches were first played there in 1882, and in 1938 the Empire Games were staged there.

Sydney Harbour Bridge, one of the world's largest steel-arch bridges. Opened in 1932, it has a clear 503m (1,650ft) span and carries four urban railway lines and six lanes of road across the great harbour in Sydney, Australia. See also p.533.

Sydney Opera House, opera house in Sydney, Australia, designed by the Danish architect Joern UTZON. It was completed in 1973, some 18 years after Utzon won the competition for the design in 1956.

Sydow, Max von (1929–), Swedish actor known for his portrayals of madness in Ingmar BERGMAN's films, such as *The Virgin Spring* (1960). Other films include *The Seventh Seal* (1957), *The Greatest Story Ever Told* (1965) and *Exorcist* (1973).

Syllogism, logical argument consisting of at least three propositions: two or more premises and a conclusion. The premises are related in such a way that the conclusion must be valid. See also p.1710.

Sylphides, Les, ballet in one act with choreography by FOKINE and music based on CHOPIN piano pieces orchestrated by GLAZUNOV. It was first produced in St Petersburg, in 1907, and the first performance in its final version after revisions by Fokine was given by the BALLETUS RUSSES in Paris in 1909.

Sylvester, name of four Roman Catholic popes and antipopes. St Sylvester I (r.314–35) reputedly baptized the Emperor CONSTANTINE I for which he was presented with the Donation of Constantine. He sent two legates to the First Council of NICAEE in 325 which defined the articles of Christianity. Sylvester II (Gerbert) (r.999–1003) was the first French pope. He aided the Christianization of Poland and Hungary, and denounced simony, nepotism and the keeping of concubines by clergy. Sylvester III was antipope (1045) to Benedict IX; Sylvester IV was antipope (1105–1111) to Paschal II.

Symbiosis, relationship between two or more different organisms that is generally mutually advantageous to each. See also COMMENSALISM; PARASITE.

Symbolic logic, also known as formal or mathematical logic, uses symbols to represent the forms of sentences expressing propositions. First developed in the 19th century, it is an extension of previous forms of logic.

Symbolism, European art and literary movement. In art it arose in France in the 1880s in reaction against the pragmatic Realism of COURBET and of IMPRESSIONISM and in favour of forms which would express ideas or abstractions rather than simply imitate the visible world. There were two tendencies in the movement. The first and most important was that which stemmed from GAUGUIN and Émile BERNARD (c.1888) and became known as CLOISSONISM. The second, less concerned with formal innovation, took the form of a retreat into the past via religious, historical and mythological themes employed in traditional painting styles. The chief exponents were Gustave MOREAU, Odilon REDON and PUVIS DE CHEVANNES in France and the PRE-RAPHAELITE BROTHERHOOD in England. In literature, the movement included a group of poets active in the 19th century, who were followers of VERLAINE, MALLARME, RIMBAUD in France, all influenced by Baudelaire, and POE and SWINBURNE writing in English. They shared a desire to transcend the limitations of the Realist novel to create poetic truth through suggestion.

Symington, William (1763–1831), British engineer. He applied the principle of the steam engine to a road vehicle in 1786, and to boats in 1788. In 1801 he built the first successful steam-driven paddle boat.

Symmachus, Saint (d.514), pope from 498 to 514. Although his election was disputed by the followers of the archpriest Laurentius, Symmachus upheld the Catholic faith against the Henotikon of ZENO and the MANICHEANS, expelling the latter from Rome.

Symmetry, in biology, anatomical description of body form or geometrical pattern of a plant or animal. It is used in the classification of living things (taxonomy), and to clarify relationships.

Symons, Julian Gustav (1912–), British biographer and novelist. After a period as a journalist he took up writing historical studies and biographies, including *Charles Dickens* (1951), *The General Strike* (1957) and *The Thirties* (1960). His detective fiction includes *The Narrowing Circle* (1954) and *The Progress of a Crime* (1960). He also wrote a history of crime fiction, *Bloody Murder* (1972).

Sympathetic nervous system

Sympathetic nervous system. See pp.126, 127, 155.

Symphonic poem, one-movement orchestral work, also called tone poems and often analogous to programme music. It was popular with composers of the 19th century and the term was first used by Franz LISZT, who sought to express the language of the poet in music. Early works by him include *Mazeppa* (composed 1851) and *Hamlet* (1858). The tone poems of Richard STRAUSS are renowned for the mastery of invention and colourful orchestration.

Symphony, large-scale musical work for ORCHESTRA. It has evolved steadily since the 18th century, when it received its first classical definition in the works of HAYDN and MOZART. A symphony usually has four movements and, in the tradition of the CLASSICAL symphony, has its first movement in SONATA form. The classical symphony nearly always included one movement which was either a MINUET or a SCHERZO. The first symphonies were scored almost exclusively for STRINGED INSTRUMENTS of the VIOLIN family, but in the early 19th century the use of large BRASS and WOODWIND sections had become general. See also pp.1580-1581.

Synaesthesia, sensation experienced at a point different from the point of stimulation. For example, an individual with chromaesthesia, the most common form of synaesthesia, experiences colours (visually) when hearing music (aurally). **Synagogue,** place of assembly for Jewish worship, education and cultural development. They serve as communal centres, led by a RABBI; they house the ARK of the COVENANT. As actual buildings, synagogues date from the 3rd century BC although homes were used as temporary synagogues after the destruction of Solomon's Temple (Jerusalem) in 586 BC.

Synapse, connection between the nerve ending of one NEURON and the receptive area of the next. In a chain of neurons this gap is bridged by a special "transmitter substance", such as ACETYLCHOLINE, which is produced by structures in the nerve endings. See also pp.126-127.

Synchrotron, accelerator in which a beam of ELECTRONS or PROTONS is focused and guided around a fixed circular path by changing magnetic fields. Millions of revolutions are made. A high-frequency electric field at one point in the path accelerates the particles. Proton energies can reach hundreds of GeV, electron energies tens of GeV.

Syncline, downward fold in rocks. The bending of rocks is called folding. When rock layers fold down into a trough-like form, it is called a syncline. (An upward arch-shaped fold is called an anticline.) The sides of the syncline are called limbs, and the median line between the limbs along the trough is known as the axis of the fold. See also pp.212, 213, 214.

Syncope, in music, a contradiction or breach of a regular rhythmic pattern. It is normally produced in two ways, by the momentary introduction of an accent off the regular beat of the rhythm or by placing longer notes on weak beats in a bar.

Syndicalism, early 20th-century form of socialism originating in France. It proposed public ownership of the means of production by small worker groups and called for the elimination of central government. Unlike forms of socialism that advocate peaceful change, the movement encouraged revolutionary action by workers to initiate a syndicalist system.

Syndrome, in medicine, a group of symptoms that together form a pattern from which a disorder or disease may be identified.

Syngé, John Millington (1871-1909), Irish dramatist and poet who was important in the IRISH LITERARY RENAISSANCE. He was one of the organizers of the ABBEY THEATRE in 1904 and his works, which depict the bleak and tragic lives of Irish peasants and fishermen, include *Riders to the Sea* (1904), *The Well of the Saints* (1905) and *The Playboy of the Western World* (1907). See also pp.1766, 1767.

Syngé, Richard Laurence Millington (1914-), British biochemist. He shared

the 1952 Nobel Prize in chemistry with Archer J.P. MARTIN for developing paper CHROMATOGRAPHY, in which structurally complicated chemicals can be identified by noting the rate at which they diffuse up a column of filter paper. This discovery was used by Frederick SANGER to identify the individual AMINO ACIDS in INSULIN.

Synodic period, interval between two successive conjunctions or oppositions with the Sun of a planet or the Moon as seen from the Earth. For the Moon, the synodic period is the time taken for a single complete cycle of phases, equalling 29.53 days.

Synoptic Gospels, term used to describe the GOSPELS of St MATTHEW, St MARK and St LUKE. These accounts contain similar subject matter, phrasing and interpretation, and their textual interdependence is generally accepted. St Mark's Gospel is generally held to have been the model for St Matthew's and St Luke's, although the latter two have gathered some material from a common non-extant source known as "Q".

Synovitis, inflammation of the synovial membrane of the joints and tendons. It causes pain and may be accompanied by swelling and stiffness. See also p.1070.

Syntax, in grammar, the construction of sentences, clauses and phrases. The study of syntax examines the arrangement of words and phrases and the relationships between different sentences.

Synthetic dyes, man-made colours for fabrics and plastics. Originating with the discovery of the first aniline dye mauveine by William PERKIN in 1856, the synthetic dye industry rapidly replaced natural dye-stuffs such as INDIGO and Madder. Chemists have also been able to synthesize these two natural compounds. See also p.584.

Synthetic fibres. See MAN-MADE FIBRES.

Synthetic rubber. See RUBBER.

Synthetism, or cloisonnism, French style of painting in the 1890s centred around Pont-Aven, Brittany. The major artists involved were Émile BERNARD and Paul GAUGUIN, who attempted to synthesize the colour planes and lines on the canvas with the feeling of the subject.

Syphilis, systemic infectious disorder caused by the SPIROCHETE *T. p. pallidum*. It is usually transmitted through sexual contact, but sometimes occurs congenitally. The first symptom is a small, hard swelling at the site of infection. In the second stage, there are skin lesions or a rash. Tertiary symptoms may be incapacitating or fatal, affecting almost any part of the body. Other forms are endemic and non-venereal. Laboratory tests can detect syphilis in its earliest stage, when treatment with PENICILLIN can achieve a complete cure. See also p.1078.

Syr Darya, shallow river flowing through the USSR, formed by the junction of the Naryn and Kara Darya rivers in the Fergana Valley of Uzbekistan, flowing west past Leninabad in Tadzhikistan and re-entering Uzbekistan at Begovat. It then flows into Kazakhstan below Chirchik, and past Chardara, forming the E and N limits of the Kyzyl Kum desert between Kyzyl-Orda and Kazalinsk, to the Aral Sea. Length: 2,206km (1,370 miles).

Syria, independent nation in the Middle East. Its dominant geographical features are the Anti-Lebanon and Alawite Mts along the coast from Israel to Turkey, the valley of the River Euphrates and the Jebel al-Druse Mts in the S. The economy is based on agriculture and stock raising, and cotton is the major export. The capital is Damascus. Area: 185,123sq km (71,476sq miles). Pop. (1976 est.) 7,585,000. See p.2148.

Syriac, Semitic language belonging to the eastern ARAMAIC group. In ancient times it was spoken in Edessa, now Urfa in SE Turkey. Because of the importance of Edessa as a centre of Christianity in the 2nd century, Syriac was adopted by the neighbouring Aramaic Christians and has been used ever since as a liturgical language by Oriental Christians of the Syrian rite. Syriac literature preserves many translations of Greek Christian texts

which have not survived in the original Greek.

Syrian War, campaigns of 192-189 BC waged between Antiochus III, the SELEUCID king, and Rome. In an attempt to enlarge his kingdom, Antiochus conquered Ptolemaic Syria and Palestine (195 BC) and invaded Greece. He lost two major land battles to the Romans (at Thermopylae and Magnesia), and Seleucid power in the Mediterranean was ended by the peace of Apamea (188).

Syringa, genus of flowering deciduous shrubs and trees native to Europe and NE Asia. Most of the 30 species are cultivated. Family Oleaceae. See also LILAC.

Syrinx, vocal organ of a bird, consisting of thin, vibrating muscles at the base of the windpipe.

Systems analysis, method of analysing a process or operation in order to improve efficiency, particularly with the aid of a COMPUTER, which has the capacity to handle the large number of interdependent activities involved in a complex operation. See also p.1853.

Systole, time in the cardiac cycle when the HEART muscle is under contraction, ejecting blood from the heart into the arterial system. See also pp.1195, 1196.

Szczecin (Stettin), city in NW Poland, on the River Oder near its mouth in Stettiner Haff bay; capital of Szczecin province, a major port and industrial city. Szczecin was the largest city of Pomerania in the 12th century, and an important member of the HANSEATIC LEAGUE. It passed to Sweden in 1648 under the Peace of Westphalia, then to Prussia in 1720. The city was returned to Poland by the Potsdam Conference in 1945. Industries: shipbuilding, iron works, chemicals, food processing, fishing. Pop. (1979) 388,000.

Szechwan (Sichuan), province in SW China, bounded by the provinces of Tsinghai, Kansu and Shensi (N), Hupei and Hunan (E), Kweichow and Yunnan (S) and completely surrounded by mountains; the capital is Chengtu. The E part of the region corresponds to the large, heavily populated Red Basin, which is the most prosperous area of China. Szechwan is the country's leading producer of rice, corn and sweet potatoes and soya beans, barley and fruit are also grown. Livestock, including cattle, pigs, horses and oxen, are reared, particularly in the W. Salt, coal and iron are mined and other products include rape-oil and silk, for which Szechwan was once world famous. Area: 569,215sq km (219,774sq miles). Pop. (1976-89 est.) 97,000,000. See p.2006.

Szell, George (1897-1970), US conductor, b. Hungary. After studying composition with MAX REGER he turned to conducting on the recommendation of Richard STRAUSS and in 1917 became conductor of the Strasbourg Opera. He became conductor at the Metropolitan Opera (1942-46) and then permanent conductor of the Cleveland Orchestra (1946-70).

Szent-Györgyi, Albert von Nagyrappott (1893-), biochemist, b. Hungary. He was awarded the 1937 Nobel Prize in physiology and medicine for his work on biological oxidation processes and the isolation of vitamin C. He also studied the biochemistry of MUSCLE, discovering the muscle protein ACTIN that is responsible for muscular contraction when combined with the muscle protein MYOSIN.

Szewinska, Irena (1946-), née Kirszenstein, Polish sprinter and long jumper, b. Leningrad. In four Olympic Games she won three gold medals (for the 4x100m relay in 1964, for the 200m in 1968 and for the 400m in 1976), one silver and two bronze medals. She set seven world records for distances of from 100m to 400m.

Szilard, Leo (1898-1964), US physicist, b. Hungary. His early work established the relation between information transfer and ENTROPY. He devised a means of separating ISOTOPES of artificial radioactive elements; developed the chemostat; and proposed aging, recall and memory theories. He was also involved in the creation of the first sustained nuclear chain reaction and in the initiation of the atomic bomb.

Szymanowski, Karol (1882-1937), Polish

post-romantic composer who began composing in about 1900 and did much to promote the nationalist cause in his country. Early influences were the works of SCRIBIN and CHOPIN and from 1906 to 1908 he studied the works of WAGNER and Richard STRAUSS in Germany. His works include two violin concertos (1917, 1933) and the opera *King Roger* (1926).

T

T, 20th letter of the alphabet, derived from the Semitic letter *taw* (meaning mark) and the Greek *tau*. The Roman letter had the same form as the modern T. In English *t* nearly always has the sound as in *fat* and *tar*, although it is silent in such words as *listen* and *castle*, and in words derived from the French, eg *depot* and *debut*. The combination with *h* gives rise to two sounds, as in *thin* and *this*, and the combination with *i* sometimes gives the sound *sh*, as in *action* and *militia*. See also pp.608-609.

Tabernacle, in Judaism, the portable shrine used by the Jews for worship during their wanderings in Sinai. It is also called Mishkan, or the dwelling of God. It was a rectangular tent covered with skins. It contained the ARK of the COVENANT. The Jews believed the tabernacle to embody the presence of God among His people. In Christianity a tabernacle is a receptacle in which the Blessed Sacrament is reserved for the Eucharist, or for spiritual contemplation.

Tables, The, four representative committees which took virtual control of Scotland in 1637 to fight against CHARLES I's attempt to impose the Anglican form of worship on Scotland. They drew up a covenant which denounced the Prayer Book and affirmed PRESBYTERIANISM; and they began to prepare Scotland for war.

Table tennis, table sport (also known as ping pong) played by two or four people. The table is 2.7m (9ft) long, 1.5m (5ft) wide, and 76.2cm (30in) from the floor. The surface is divided by a transverse net 15.2cm (6in) high, and halved longitudinally by a light stripe. A hollow celluloid ball is hit with a wooden bat. On the serve, the ball must bounce once before clearing the net on the near surface and then bounce once on the far surface before it is returned. After the serve, the ball must bounce only once on the far side of the net. If the ball goes foul or fails to be returned properly, a point is scored. Each player in turn has five consecutive serves. The winner is the first player to score 21 points while leading by at least two points; games tied at 20-20 continue until a two-point margin is achieved. In doubles the players must return the ball in a set order. Table tennis is the national sport of China.

Taboo, or tabu, prohibition of a form of behaviour, object, word, etc. In many primitive cultures a thing may be regarded as taboo because it is either unclean or sacred—there is often a taboo on a totem. Breaking a taboo is believed to bring supernatural retribution and often also brings social ostracism or other punishment. The term is of Tongan origin.

Tabriz, city in NW Iran. An ancient city, it served as the capital of Armenia under King Tiridates III in the 3rd century AD. Ghazan Khan developed it as the chief administrative centre for his vast Asian empire in 1295; it was occupied by the Ottoman Turks in 1514, 1585-1603 and 1724-30, and held by the Russians 1827-28. The proximity of Tabriz to Turkey and the Soviet Union has made it an important trading centre; manufactures include carpets, shoes, soap and textiles. Pop. 510,000.

Tabularium, building in ancient Rome of which only the façade remains. It was the state records office and was built in 78 BC. It is one of the earliest buildings to incorporate an arch with the columns of classical architecture and to employ concrete in the vaultings.

Tachinid fly, any of several species of insects, the large larvae of which are internal parasites of other insects, including the GYPSY MOTH, armyworm and CUTWORM. Many species resemble HOUSE FLIES. Family Tachinidae.

Tachisme (from the French word *tâche* meaning a blot), in art, term used for the method of painting by which irregular or seemingly random dabs of colour are applied to the canvas. The term was coined by Michel Tapié in the early 1950s. Tachiste painters such as Camille Bryen, Georges Mathieu and Jean Atlan reacted against both abstraction and naturalism in art, and claimed supremacy for each individual patch of colour as an element of emotional projection in its own right.

Tachometer, device that measures rate of rotation, as of a wheel or shaft. One type of tachometer is a simple revolution counter, with which average speeds of rotation can be measured with the further aid of a stopwatch. More sophisticated instruments show instantaneous speeds of rotation. These instruments are used widely in high-performance cars and in industry to check machine performance. They may be made on mechanical, electrical or electronic principles.

Tachycardia, rapid heart beat which may occur normally after some form of stress or which may have a pathological origin.

Tacitus, Cornelius (c.55–120), Roman historian. The perfection of his style, the appeal of his political ideas and the relative accuracy of his accounts have established him as the greatest Roman historian. His first important works were the *Agricola* (c.98), a eulogy of his father-in-law, who was governor of Britain, and the *Germania* (c.98), a description of the Rhine frontier. Other works include *Histories* (c.109) and *Annals* (c.114). See also p.1381.

Tacna-Arica Dispute. See ARICA-TACNA DISPUTE.

Taconite, kind of CHERT that contains iron, resulting from replacement processes. It is used as an iron ore in some countries where it is abundant.

Taddeo di Bartolo (c.1386–1422), Sienese painter. His work, influenced by Simone MARTINI, is characterized by a profusion of decorative detail. Among his works is the fresco series of Republican heroes in the Palazzo Pubblico, Siena.

Tadema, Lawrence Alma. See ALMA-TADEMA, SIR LAWRENCE.

Tadpole, aquatic larva of a TOAD or FROG; it has a finned tail and gills, and lacks lungs and legs. Unlike adult forms the tadpoles of most species are herbivores, feeding on algae and other aquatic plants. During METAMORPHOSIS limbs are grown, the tail is resorbed, and internal lungs take the place of gills. See also pp.65, 328.

Tadzhikistan (Tadjikskaja SSR), constituent republic of the USSR, bounded by Afghanistan (s) and China (e). The region is mountainous and the principal rivers are the Amu Darya, Syr Darya and Zeravshan. Agriculture is the basis of the economy; cotton, fruit and cereals are grown, and livestock raising is also important. Gold, antimony, coal and fluorspar are mined and the manufacture of cotton, silk and leather goods are major industries. The capital is Dushanbe. Area: 143,100sq km (55,250sq miles). Pop. (1976) 3,400,000. See p.2152.

Taeju, city in s central South Korea; capital of North Kyongsang province and third largest city in South Korea. The city was successfully defended by UN troops during the KOREAN WAR. Taeju is a trade centre for a farming and mining region. Pop. (1975) 1,309,454.

Taenia. See TAPEWORM.

Tafawa Balewa, Alhaji Sir Abubakar (1912–66), Nigerian politician. Leader of the Northern People's Congress, he became Prime Minister of the Federal Republic of Nigeria in 1957 and led Nigeria to independence from British rule in 1960. He was assassinated in a military coup.

Taffeta, thin, tightly woven fabric, finished so that it is rather stiff and has a sheen. Originally woven from spun silk, taffeta may now contain synthetic fibres.

Taff Vale Case (1900), suing of the Amalgamated Society of Railway Servants by the Taff Vale Railway for damages suffered from a strike. Against earlier interpretations of the 1871 Trade Union Act the House of Lords, on appeal, upheld the judgment that the union was liable. The ASRS paid £23,000. The unions gained redress in the Trade Disputes Act of 1906, which made them not liable.

Tafilet, Saharan oasis in modern Morocco which fostered a BERBER trading kingdom from the 8th to the 14th centuries. Tafilet now trades in dates and leather.

Taft, William Howard (1857–1930), 27th President of the USA (1909–13) and 10th Chief Justice of the Supreme Court (1921–30). A practising lawyer, he made his way up the political ladder in the Republican Party. In 1900 he was sent to the Philippines to set up a government and became the first US civil governor in 1901. He was a friend of President Theodore ROOSEVELT, who appointed him Secretary of War (1904), and he became one of Roosevelt's closest advisors and ultimately his successor. Their relationship deteriorated, however, when Roosevelt thought Taft's administration too conservative over anti-trust activities and a high protective tariff. Roosevelt split the Republican Party, with the result that Taft failed to win re-election.

Taft-Hartley Act (1947), US labour legislation, also known as the Labor-Management Relations Act. It outlawed the CLOSED SHOP, required unions to reveal their financial status, limited union political activity, required union leaders to sign a non-Communist affidavit and authorized the government to issue 80-day strike injunctions. Other provisions allowed employers to sue unions and enlarged the National Labor Relations Board.

Tagalog, national language of the Philippines. In 1962 it was made the country's official language and given the new name of Filipino. It is the mother tongue of about 5 million people, but it is estimated that about 37 million more understand the language. Tagalog belongs to the Malayo-Polynesian family of languages.

Tagetes. See MARIGOLD.

Taglioni, Filippo (1777–1871), Italian dancer and choreographer; ballet master for the Stockholm Ballet from 1803. His most famous work is *La Sylphide* (1832), created for his daughter, Maria TAGLIONI. This is credited as being the first ROMANTIC ballet. See also pp.1758, 1758.

Taglioni, Maria (1804–84), Italian ballet dancer who developed a style that became the prototype of Romantic ballet and transformed the use of pointwork from a display of technical virtuosity to an art form of great beauty. Her best performance was considered to be in *La Sylphide*, performed at the Paris Opéra in 1832. See also pp.1758, 1758.

Tagore, Rabindranath (1861–1941), Indian poet, philosopher and social theorist who received the 1913 Nobel Prize in literature. He wrote mainly in Bengali, to which he introduced several verse forms new to the language, including the ode. He is best known in the west for his collection of poetry *Gitanjali* (1910). See also pp.1778, 1779.

Tagus (Tajo, Tejo), river in Spain and Portugal that rises in E central Spain and flows NW then WSW to enter the Atlantic Ocean at Lisbon. It is the longest river on the Iberian Peninsula and forms part of the Spanish-Portuguese border. The river is navigable for 130km (90 miles). Length: approx. 1,000km (620 miles).

Tahiti, island in the s Pacific Ocean, in the Windward group of the Society Islands, French Polynesia; largest of the French Polynesian islands. It was charted in 1767 by the British navigator Samuel Wallis and explored by Capt. James COOK on several visits between 1769 and 1777. The island was colonized by France in 1880. Tahiti is mountainous and fertile and produces tropical fruits, copra, sugar cane and vanilla. Pearl fishing is an important industry. The capital is Papeete. Area: 1,058sq km (408sq miles). Pop. (1977) 95,604.

Tahr, gregarious, goat-like ruminant that lives in the Himalayas, s India and se Arabia. The long coat varies from light to dark brown. Height: to 1.1m (3.5ft); weight: to 90kg (200lb). Family Bovidae; genus *Hemitragus*.

Tai, people of Chinese origin, who inhabit the mainland of se Asia. They consist of several Tai-speaking groups: the Siamese, Lao, Shan, Lu, Yunnan Tai and tribal Tai. Agriculturalists, their major crop is rice. Although Theravada Buddhism is the principal religion, some ANIMISM remains.

Taiaha, wooden MAORI weapon, about 1–2m (3–6ft) long, carved at the head with a tongue protruding from a face. It was the chief two-handed weapon of the Maoris.

Tai Chin (1388–1462), Chinese landscape painter. An important member of the regional Che School, he was known for his clever brushwork.

Taiga, in Asia, extensive northern pine forests that are known in Europe and the USA as BOREAL FOREST. The southern boundary is marked by the increasing number of deciduous trees among the pine trees as the temperature rises. To the north lies the vast frozen wastes of the TUNDRA. See also pp.304–305, 304–305.

Taika Reforms (646–702), series of political edicts in Japan. Designed to establish a central Chinese-style government controlled by the emperor, the reforms included the imperial control of land, systematic taxation and the creation of a bureaucracy of officials from which developed the Japanese aristocracy. See also p.1264.

Tailings, mine, rock and other waste materials produced by excavation and the washing, crushing and other treatments of ores.

Tailleferre, Germaine (1892–), French composer who studied with Darius MILHAUD. She became prominent as a member of the group of young composers known as Les six who reacted against the style of DEBUSSY after WWI. She wrote two operas, *Jeux de Plein Air* (1923) for two pianos, and a concerto for harp and orchestra.

Tailorbird, any of several species of mainly dull-coloured, tropical Asian and African warblers that sew leaves together with plant fibre, cotton, grass or wool, forming a basket, inside which a nest is built. Length: to 12.5cm (5in). Family Sylviidae; genus *Orthotomus*. See also p.76.

Tainan, city on the SW coast of Taiwan. One of the oldest cities in Taiwan, it was settled in 1590 and held by the Dutch 1623–62. Fishing is an important activity, and products include textiles, processed food and machinery. Pop. (1970 est.) 475,000.

Tain Bó Cuailgne (*The Cattle Raid of Cooley*), Irish epic-like SAGA of the 7th or 8th century AD. In prose with verse passages, it describes the controversy between Ulster and Connaught over ownership of the Brown Bull of Cooley. It is chiefly read for its descriptions of CÚ CHULAINN. See also p.1519.

Taine, Hippolyte-Adolphe (1828–93), French historian whose theories on DETERMINISM made him one of the foremost exponents of POSITIVISM. Among his best-known works is *De l'intelligence* (1870); *Les Origines de la France Contemporaine* (1876–99) deals with the philosophy of history.

Taipei, capital of Taiwan, at the N end of the island. A major trade centre for tea in the 19th century, the city was enlarged under Japanese rule (1895–1945) and became the seat of the Chinese Nationalist government in 1949. Products include textiles, chemicals, fertilizers, metals and machinery. Pop. (1979) 2,160,000.

Taiiping Rebellion (1851–64), revolt in China against the MANCHU led by a Hakka fanatic, Hung Hsiu-ch'uan, who thought himself to be the son of God. The fighting laid waste 17 provinces of China and resulted in more than 20 million casualties. The Manchus never recovered their ability to govern China with their former authority. See also pp.1622, 1622.

Taira family, leading military group in Japan in the 11th and early 12th centuries

Tachinid flies lay their eggs on other insects; the larvae develop as parasites.

Tacitus's writing reveals much about the period of the early Roman Empire.

Tahrs live in mountains and have thick fur to protect against the cold.

Tailorbirds lay 3 or 4 eggs in nests which are lined with down, grass or hair.

Tairov, Alexander Yakovlevich

Taj Mahal, made of white marble and red sandstone, was built by 20,000 men.

William Henry Fox Talbot had many controversies with other early photographers.

Talleyrand was Foreign Minister under three different regimes during his career.

Tamarisks of Asia Minor exude a honey-like substance eaten by the Bedouins.

AD. The family was descended from the emperor Kammu and rose to power as servants of the KYŌTO emperors. Under Taira Kiyomori (1118-81) the Taira wielded great power in Japan, but it was heavily defeated by its rival, the Minamoto family, in 1185. See also p.1265.

Tairov, Alexander Yakovlevich (1885-1950), Soviet theatrical producer and director. After founding the Kamerny (Chamber) Theatre in Moscow in 1914, he was its producer-director until 1949. A firm opponent of STANISLAVSKY, he subscribed to MEYERHOLD's opinions, attempting to achieve perfect aesthetic unity in his productions.

Tai Tsung (597-649), Chinese emperor of the Tang dynasty, son of Li Yuan. He conquered the Eastern Turks in wars from 624 to 630 and controlled the petty states of Turkestan. He also established contacts with India and Persia.

Taiwan. See CHINA.

Taiyuan, city in NE China, 427km (265 miles) SW of Peking, on the River Fen; the capital of Shansi province. The region has rich coal and iron ore deposits and Taiyuan is a major industrial city. It has iron and steel, chemical and engineering plants. Pop. (1970 est.) 2,725,000.

Taizé, religious community in SE France, founded in 1940 by Roger Schutz as a home for Jewish and other refugees during WWII. Monastic from 1949 onwards, the community is made up of various Protestant denominations and is dedicated to promoting Christian unity.

Ta'izz, city in S Yemen, 52km (32 miles) E of Mocha. It served as the administrative capital of the Yemen 1948-62. Ta'izz is a market for agricultural goods. Pop. (1970 est.) 84,000.

Taj Mahal, Muslim mausoleum built beside the River Sumna outside Agra, India between 1630 and 1648. It was built for the Mogul emperor Shah Jahan after the death of his favourite wife, and the final design is accredited to Ustād 'Isā. With its bulb-shaped dome, intricate inlays of semiprecious stones and oblong reflecting pool, it is set within a garden and ranks among the world's most beautiful buildings. See also p.1497.

Takahe, rare, flightless New Zealand bird, related to the rail and gallinule; once regarded as extinct, it was rediscovered in 1948. Turkey-sized, it has a heavy curved bill, a reddish shield on the forehead and bright blue-green plumage. Family Rallidae; species *Notornis mantelli*. See also p.85.

Takin, heavy goat-like mammal of the forests of the Himalayan foothills and the mountains of Central Asia. It has a thick, shaggy brownish coat and backward-pointing horns. It feeds primarily on bamboo shoots and other plants. Height: to 100cm (39in) at shoulder. Family Bovidae; species *Budorcas taxicolor*.

Takis, Vassilakis (1925-), self-taught Greek sculptor. After moving to Paris in 1954 he experimented with kinetic sculpture using magnets. Many of his sculptures consist of slender, upright rods which move with a gentle vibrating action.

Takoradi. See SEKONDI-TAKORADI.

Talaing, or Mon, Mongoloid people who inhabit the delta region of Burma and western Thailand. An agricultural people who cultivate rice, they introduced the writing (Pali) and religion (Buddhism) which is predominant in Burma today.

Talbot, William Henry Fox (1800-77), British scientist who improved on the work of NIPCE and DAGUERRE by inventing the first practical photographic process capable of producing any number of positive prints from an original paper negative. This calotype (later Talbotype) process was patented in 1841 but lost popularity after the glass negative was introduced in 1851. Talbot's book *The Pencil of Nature* (1844) was the first to include photographs as illustrations. See also p.628.

Talc, sheet silicate mineral, hydrous magnesium silicate, $Mg_3Si_4O_{10}(OH)_2$; used as base for TALCUM POWDER and in ceramics. It occurs as rare tabulate crystals in a monoclinic system and as masses and is either white, green, blue or brown in

colour. Hardness 1; s.g. 2.6.

Talcum powder, powdered form of natural hydrated magnesium silicate. It is used in paints as an extender, as a lubricant and in cosmetic and pharmaceutical preparations.

Talenti, Francesco (c.1300-c.69), Florentine architect whose principal work includes the completion of the campanile of the cathedral in Florence.

Tale of Genji, Japanese work written in the 11th century by Lady Murasaki Shikibu. The greatest work of the HEIAN period, it relates the amorous adventures of Prince Genji in the Japanese feudal court with great sensitivity for the subtleties of human emotions, underpinned by a Buddhist philosophy. It is sometimes regarded as the first significant prose work written. It was first translated into English by Arthur WALEY between 1925 and 1935. See also pp.1265-1266, 1265-1266.

Tale of Two Cities, A (1859), historical novel by Charles DICKENS, set in London and Paris against the background of the French Revolution. It tells the melodramatic story of the love of Charles Darnay and Lucie Manette.

Tales of Hoffmann, The (1881), three-act comic opera by Jacques OFFENBACH with libretto by Jules Barbier, derived indirectly from stories by E. T. A. HOFFMANN. The opera occupied Offenbach for many years, but he died before it was produced; it is considered the finest example of his work.

Taliesin, The Book of. See BOOK OF TALIESIN.

Tallage, tax in medieval England paid by a VILLEIN to his lord or, more important, by towns and boroughs to the king. First used (by that name) in 1173, it was a special tax, general in its appropriation, beyond regular feudal dues. It was abolished in 1340.

Tallahassee, state capital of Florida, USA, 258km (160 miles) W of Jacksonville. Originally inhabited by Seminole Indians, the settlement was developed as a Spanish mission; it became capital of Florida Territory in 1824. The city is the seat of Florida State University (1857). Industries: timber, food processing, tourism. Pop. (1980) 80,820.

Talleyrand-Périgord, Charles Maurice de (1754-1838), French statesman who was able to follow a successful career throughout the many changes in French politics during his lifetime. Made Foreign Minister under the DIRECTORY in 1797, he also served under NAPOLEON until disagreement over Napoleon's European ambitions led him to help to restore the House of BOURBON in 1814. At the Congress of VIENNA he skillfully exploited the tensions among the victors to the benefit of France, and as a supporter of LOUIS PHILIPPE he became ambassador to London from 1830 to 1834.

Tallin (Talin), capital of Estonia (Estonian SSR), USSR, on the Gulf of Finland opposite Helsinki, 320km (200 miles) W of Leningrad. It was founded in 1219 by the Danes and became a member of the HANSEATIC LEAGUE in 1285, but was sold by its ruler to the TEUTONIC KNIGHTS in 1346. It passed to Sweden in 1561 and was ceded to Russia in 1721. It was developed in the 19th century as a port for Russia's Baltic Fleet. It remains a major port and industrial centre, producing processed food, machinery, cables, and oilfield equipment. Pop. (1980) 436,000.

Tallis, Thomas (1505-85), English composer, famous for his church music. In 1575 he published with BYRD the *Cantiones Sacrae*, a set of motets. He also wrote a setting of Lamentations, two masses, a number of anthems, and among his motets, *Spem in alium*, in 40 parts.

Tallow tree, decorative evergreen tree that grows in SE China and the USA. The seeds yield a waxy tallow-like substance that is used in the manufacture of soap and candles. Height: to 12m (40ft). Family Euphorbiaceae; species *Sapium sebiferum*.

Tally, piece of wood marked with transverse notches, used in medieval England as a record of transactions. The notches

represented amounts of money or goods. Such a tally stick would be split along its length so that each party to the transaction retained a record of the payment or debt, which could be proved by matching the pieces.

Talmud, meaning "learning", the Oral Law of Judaism as opposed to the Scriptures. It may be divided into two parts: MISHNAH, the traditional text, and Gemara, the interpretation and commentary. Study of the Talmud is central to orthodox Jewish faith.

Talon, Jean-Baptiste (c.1625-94), French colonial administrator in Canada. As the first intendant of NEW FRANCE between 1665 and 1672, he encouraged immigration, established industry and developed the political and economic structure of French Canada.

Talus. See SCREE.

Tamale, city in N Ghana, 435km (270 miles) N of Accra; capital of the Northern region. It is a centre of education and communications, and a market for agricultural goods. Pop. (1970) 81,612.

Tamandua, small terrestrial or arboreal ANTEATER of tropical America; it has a prehensile tail that it uses for grasping branches. Its coat is thick and generally black, with a white head, neck, limbs and tail. It feeds primarily on ants. Length: to 1m (3.2ft) overall. Species *Tamandua tetradactyla*. See also pp.314, 314.

Tamarind, tropical tree native to Asia and Africa. It has pinnate (feather-like) leaves and pale yellow flowers, streaked with red. The fruit pulp is used in beverages, food and medicines. Height: 12-24m (40-80ft). Family Leguminosae; species *Tamarindus indica*.

Tamarisk, any of a group of shrubs usually found in semi-arid areas. They are deciduous and have slender branches covered with blue-green, scale-like leaves and clusters of small, white or pink flowers. Their deep, spreading roots enable them to tolerate drought and the salinity of deserts and coastal regions. Height: to 9.1m (30ft). Family Tamaricaceae.

Tamatave, seaport city on the E coast of Madagascar. It developed around the site of a European trading post in the 17th century and was occupied many times by the French. Modern industries include food processing and meat packing. Exports include spices, rice, coffee and sugar. Pop. (1971 est.) 59,000.

Tambourine, percussion musical instrument, originating in Roman times and much used by wandering musicians in Europe in the middle ages. It comprises a narrow circular frame, made of wood, with a single parchment drumhead and metal jingles attached to the sides.

Tambura, instrument of the LUTE family, found chiefly in the Middle East and India. It has four wire strings and is played with a plectrum. The Caucasian variety, called a *tampur*, has three strings and is played with a bow.

Tamburlaine the Great (c.1587), tragedy by Christopher MARLOWE. Rich in imagery and imaginative language, the play describes the rise to power and subsequent moral disintegration of the "scourge of God", Tamburlaine (TAMERLANE). Although imperfect in construction, the work is extremely moving, chiefly because of its great poetic power.

Tamerlane (Timur i Leng) (1336-1405), Mongol conqueror, claiming to be descended from GENGHIS KHAN. He had brought the area around Samarkand under his control by 1369, extending his conquests to the region of the GOLDEN HORDE between the Caspian and Black seas before invading India in 1398. He defeated the Ottoman Sultan BEYAZID I in 1402 and died while planning to invade China. Tamerlane gave his name to the TIMURID DYNASTY.

Tameside, county district in E central GREATER MANCHESTER, England; created in 1974 under the Local Government Act (1972). Area: 103sq km (40sq miles). Pop. (1974 est.) 222,600.

Tamil, language spoken in S India, chiefly in the state of Tamil Nadu on the E coast, by about 31 million people. In addition there are about two million speakers in Sri

Lanka and about one million distributed throughout Malaysia, Singapore, Fiji, Mauritius and Guyana. Tamil belongs to the DRAVIDIAN family of languages.

Tamil Nadu. See **MADRAS**.

Taming of the Shrew, The (c.1594), comedy in five acts by William SHAKESPEARE. Some sources believe it was based on an anonymous play *The Taming of A Shrew* (1594), although the latter may be simply a pirated version of Shakespeare's work. It provided the basis for the Broadway musical *Kiss Me Kate* (1948) and was filmed in 1908, 1929 and 1967.

Tamm, Igor Yevgenyevich (1895–1971), Soviet scientist and noted theoretical physicist. He shared the 1958 Nobel Prize in physics with Pavel A. CERENKOV and Ilya M. Frank for the discovery and interpretation in 1937 of the Cerenkov effect (the radiation emitted by electrons moving faster than light in an optically transparent medium).

Tammany Hall, DEMOCRATIC PARTY organization in New York. It evolved from the fraternal and patriotic order of St Tammany, which was founded in 1789 and rapidly became the focal point of resistance to the Federal Party, which dominated New York politics at the beginning of the 19th century. Politics in the city changed drastically in the next 70 years under the twin influences of manhood suffrage and mass immigration. By 1865 Tammany Hall, under William "Boss" Tweed, had become the most important voice of the Democratic Party in the city, and was synonymous with the organized corruption of US urban politics. Not until the 1930s did its power begin to crumble. **Tammuz**, pastoral deity of ancient Mesopotamia, who evolved into a fertility god similar to the Syrian ADONIS. Because he slighted the earth goddess ISHTAR, she condemned him to the underworld. He was also associated with the myth of the cycle of fertility.

Tampere, city in SW Finland, on the lake Näsijärvi; the second largest city in Finland. In 1918 the nationalist White Guards of Finland defeated the Russian-backed Finnish Bolsheviks there. The city has a university (1966). Industries: footwear, paper, textiles, machinery. Pop. (1976) 165,769.

Tamworth Manifesto, election address written by Robert PEEL for his Tamworth constituents at the 1835 elections. It was read by the Cabinet and is thus a prototype of the party manifesto. It stressed the change in Peel's party from die-hard Toryism to moderate reforming Conservatism.

Tanabata, annual Japanese "star festival", held on 7 July to celebrate the "meeting" of two stars, the Star Weaver and Altair. They are believed to represent star-crossed lovers whom the gods allow to meet once a year.

Tanager, small, brightly coloured American forest bird that has a cone-shaped bill. Tanagers feed on insects and fruit. The scarlet tanager (*Piranga olivacea*) of N North America has black on its wings and tail, and after mating loses its red plumage and resembles the olive-green female during its southerly winter migration. Family Emberizidae. See also p.315.

Tanaka, Kakuei (1918–), Prime Minister of Japan from 1972 to 1974. A self-made millionaire, he was elected to the DIET in 1947, served as Minister of Finance from 1962 to 1964 and as Minister of International Trade and Industry from 1971 to 1972. As Prime Minister he established diplomatic relations with China. Allegations of corruption forced his resignation.

Tananarive (Antananarivo), capital and largest city of Madagascar. Founded c.1625, the city became the residence for Imerina rulers in 1794 and the capital of Madagascar. Tananarive was taken by the French in 1895 and became part of a French protectorate. It is the seat of the University of Madagascar (1961). A trade centre for a rice-producing region, it has food processing, textile, tobacco and leather industries. Pop. (1975 est.) 438,000.

Tancred (1847), novel by Benjamin DISRAELI. It takes its name from Tancred

(d.1112), a hero of the first CRUSADE. Disraeli's hero, an early 19th-century heir to a dukedom, goes on a new crusade to the Holy Land.

Tandy, James Napper (1740–1803), Irish revolutionary. He helped Wolfe TONE to found the Society of UNITED IRISHMEN, was charged with sedition in 1793 and fled first to the US and then to France. He landed in Ireland during the unsuccessful rising of 1798. Sentenced to death in 1800, he was released at Napoleon's request.

Tanganyika. See **TANZANIA**.

Tanganyika, Lake, second-largest lake in Africa; second deepest freshwater lake in the world. It lies in E central Africa on the borders of Tanzania, Zaire, Zambia and Burundi, in the GREAT RIFT VALLEY. Area: 32,893sq km (12,700sq miles); depth: 1,437m (4,715ft).

Tangaroa, sea god of Polynesian mythology. In Tongan and Samoan legend, he is said to have created the earth by casting upon the waters a stone which turned into land. See also p.1902.

T'ang dynasty (618–907), Chinese dynasty that ruled during imperial China's most vigorous and creative age. The capital Ch'ang-an (modern Sian) was a cosmopolitan centre of international trade and Chinese political and cultural institutions were at their height. It was the time when Neo-Confucianism became the official ideology and was the golden age of Chinese poetry as well as the period when China re-asserted its suzerainty over much of Central Asia and Korea. The dynasty was threatened in 755 by the revolt of the Turkish military leader An Lu-shan, and never recovered its former power. See also pp.1257, 1260, 1260, 1262, 1262.

Tange, Kenzō (1913–), Japanese architect noted for his blending of traditional with modern architecture. He studied at Tokyo University (1935–38 and 1942–45), and became a professor in 1949. He was also a town planner and his work became more dramatic in the 1960s. His buildings include the Peace Centre, Hiroshima (1946–56), St Mary's Cathedral Tokyo (1962–64) and the Communications Centre (1964–67).

Tangent, in TRIGONOMETRY, ratio between the length of the sides opposite and adjacent to an acute angle within a right-angle triangle. (The third side is the hypotenuse.) The expression denoting the tangent of angle A is commonly abbreviated to "tan A". See also p.796.

Tanger. See **TANGIER**.

Tangerine, or mandarin orange, small, edible citrus fruit native to China. It has a thin skin and easily separated segments. Family Rutaceae; species *Citrus reticulata*. See also p.688.

Tangier (Tanger), port in N Morocco, on the Strait of Gibraltar. An ancient Roman port, it was later occupied by Moors and taken by the Portuguese in 1471. Tangier was transferred to England in 1662 as part of the dowry in marriage of Catherine of Braganza to Charles II. The English abandoned the city to the Moors in 1684. It became part of Morocco in 1956. It is the site of a casbah and the old Moorish walled city. Industries: rugs, pottery, shipping, fishing, tourism. Pop. (1973) 187,894.

Tango, ballroom dance that originated in Buenos Aires, Argentina, in the late 19th century. Developed from Argentinian milonga, it quickly became popular in Latin America. By 1915 it was a ballroom favourite in Europe and the USA and is still very popular in Finland. It is characterized by quick long strides and quick reversals of direction on the balls of the feet.

Tangut, former Tibetan-speaking people of a province of NW China; the kingdom, Hsi Hsia, was a part of the Chinese Sung dynasty until 1038, when Li Yüan-hao assumed the title of emperor. The Hsi Hsia (western Hsia) dynasty maintained a troubled existence for the next two centuries, but was conquered by the Mongol troops of Genghis Khan in 1227.

Tanguy, Yves (1900–55), self-taught French painter. Inspired by a painting by CHIRICO, he joined the SURREALISTS in 1925, and his paintings often show pre-

cisely rendered, fantastic objects in a dreamlike setting.

T'ang Yin (1470–1523), Chinese painter considered one of the so-called "Four Great Masters" of the Ming dynasty. He was a prolific artist, and is especially known for his hand scrolls and large hanging scrolls of ink landscapes.

Tanit, chief goddess of ancient Carthage. She was a fertility goddess but was sometimes treated as a deity of the sky. Her cult, dominant from the 5th century BC, probably included child sacrifice.

Tanizaki, Junichiro (1886–1965), Japanese novelist. He was influenced by classical Japanese literature and also by BAUDELAIRE. His works include *Some Prefer Nettles* (1929), *The Makioka Sisters* (1943–48) and *The Key* (1956).

Tank, tracked armoured vehicle mounting a single primary weapon, usually an artillery piece, and one or more machine guns. Modern tanks have an enclosed fully-revolving turret and are heavily armoured; main battle tanks weigh from 35 to 50 tonnes and usually have a crew of four. Developed in great secrecy by the British during WWI, tanks were first employed at the Battle of the Somme in 1916. See also pp.564, 564.

Tanker, ship that carries bulk liquids as cargo, usually PETROLEUM products in the form of crude oil. Modern tankers can carry up to 500,000 tonnes of liquid cargo. The growth in size of tankers has brought with it great danger from POLLUTION. The sinking of the TORREY CANYON in 1967 was the first such disaster. See also pp.474, 474, 762–763, 762–763.

Tannaim, scholars and teachers of the Jewish Oral Law who flourished during the 1st and 2nd centuries AD. Hillel, a *tanna* (scholar), began to spread the MIDRASH (a homiletical interpretation of the Jewish scriptures) of the TALMUD, and the last *tanna* Juda (died c.220 AD) organized and preserved it.

Tannenberg, Battles of, two battles at Tannenberg, Poland. At the first (1410) Lithuanian and Polish forces defeated the TEUTONIC KNIGHTS. At the second (1914) Germany defeated Russia and advanced into East Prussia.

Tannhäuser (1845), three-act opera by Richard WAGNER with libretto by the composer based on medieval legend. It was first produced at Dresden.

Tannic acid, substance used medically to treat burns and, in styptics, to arrest bleeding from minor wounds. In both instances its function is to precipitate a protective PROTEIN layer over the wound. Chemically, tannic acid is a mixture of gallo-tannins. See also **TANNIN**.

Tannin, any of a group of complex organic compounds derived from tree bark, unripe fruit and oak galls. They have the property of converting the protein GELATIN into an insoluble compound that will not putrefy, and for this reason are used in tanning to cure hides and make leather.

Tanning, process of converting skins and hides into LEATHER. Traditionally, tanning liquids are based on TANNIC ACID (TANNIN) and, although the process takes weeks, it is still used for heavy leathers. Light leathers are now tanned in a few hours using chromium salts.

Tansy, any of several mostly perennial plants characterized by fern-like aromatic leaves and clusters of yellow, button-like flower heads. *Tanacetum vulgare*, native to Eurasia, is a common weed in North America but is also cultivated as a medicinal herb. Height: to 91cm (3ft). Family Compositae.

Tantā, city in N Egypt, 82km (51 miles), N of Cairo in the delta of the River Nile. It is the scene of three annual festivals for the 13th-century Muslim leader, Ahmad al-Badawi, whose grave is in Tanta. Cotton ginning is the main source of income. Pop. (1974) 278,300.

Tantalum, metallic element (symbol Ta) of the third transition series, first isolated in 1903. Its chief ore is columbite-tantalite. It is used in electrical components in special alloys. Properties: at.no. 73; at.wt. 180.948; s.g. 16.65; m.p. 2,996°C (5,425°F); b.p. 5,425°C

Tampere's factories are largely hydroelectric-powered, so reducing pollution.

Tanager, a colourful songbird found throughout the forests of the New World.

Tanks; named in WWI when they were called "water tanks" to keep their purpose secret.

Tansy is related to the thistle and gives off a poisonous oil from its leaves.

Tantalus

Tape recorder; the first Magnetophone was demonstrated in Berlin in 1935.

Tapestry; *The Watering Place* (above) woven in Beauvais between 1772 and 1779.

Tapirs are hunted for sport and food and some species are in danger of extinction.

Tarantula; its name is derived from Taranto, a town in southern Italy.

(9,797°F); most common isotope Ta^{181} (99.988%).

Tantalus, in Greek mythology, son of ZEUS and a NYMPH. Because he revealed godly secrets to mortals, he was plunged up to his chin in a river of HADES under a fruit-laden tree. When he tried to drink, the waters receded; the fruit was beyond his grasp. From his name comes the verb "tantalize".

Tantrism, term used to describe the various esoteric practices of the Tantra, used by Buddhists, Jains and Hindus to fulfil worldly desires and attain spiritual experiences. These practices include YOGA, MANTRA, MANDALAS and SHAKTI. The body is purified and the mind controlled by secret practices laid down in a group of post-Vedic Sanskrit writings, so that the believer may attain ultimate spiritual enlightenment. It is practised throughout Tibet, India, Bhutan and Nepal.

Tanzania, independent nation in E Africa, formed in 1961 from the former British territories of Tanganyika and Zanzibar. Most Tanzanians are subsistence farmers. The chief commercial crops are coffee, cotton and sisal; mineral deposits include diamonds. Most manufacturing is concentrated in Dar-es-Salaam, the capital. Tourism is becoming increasingly important to the economy. Areas: 945,087 sq km (364,898 sq miles). Pop. (1979 est.) 17,600,000. See p.2149.

Tao Ch'ien (365-427), Chinese poet. He developed a simple style that differed from the ornateness of his contemporaries; his verse, which has a predominantly Taoist outlook, is frequently about nature and wine. See also TAOISM.

Taoism, Chinese philosophy and religion considered next to CONFUCIANISM in importance. Taoist philosophy is traced to a 6th-century BC classic of LAO-TZE, the *Tao te Ching*. The recurrent theme is the *Tao*, or path. To follow the *Tao* is to follow the path of the cosmos leading to self-realization. Taoist ethics emphasize patience, simplicity and the harmony of nature. As a religion, Taoism dates from the time of Chang Tao-ling, who organized a group of followers in AD 142. It was a state religion in China for a time, but in modern times membership has dwindled. See also p.2099.

Tapa, in the Pacific Islands, fabric made from softened bark, used as a substitute for woven cloth; it is used primarily for clothing, shelter, wall-hangings and mats.

Tap dance, dance in which the toes and heels rapidly tap the floor to emphasize the rhythm of the accompanying music. This type of dance used to be performed in clogs, but is now performed in the lightest of shoes which have metal plates (known as taps) on the toes and the heels.

Tape, magnetic, as used on audio and video tape recorders and computers, thin strip of plastic, coated on one side with a thin layer of iron or chromium oxide. During recording, the oxide layer is magnetized by the recording head in a pattern corresponding to the input signal. During playback the magnetized oxide particles induce an electric current identical to the one that produced them. See also pp.466-467, 642-645, 874.

Tape recorder, device which records and plays back sound on magnetically treated tape. Sound is transformed into electric current and fed to a TRANSDUCER, which converts it into the magnetic variations that magnetize the particles on the treated tape. See also p.642.

Tapestry, hand-woven fabric of plain weave, made without shuttle or drawboy, the threads being threaded into the warp with a needle or bodkin. The term now includes many heavy materials that are not true tapestries, such as machine-made carpets and upholstery. Tapestry design is an ancient art and a few examples survive from 15th-century BC Egypt. From the 5th to the 14th century convents and monasteries were the main centres. The first great French woollen tapestry was made at ARRAS in the 14th century. Soon afterwards Brussels became the centre of the craft, and remained important until the rise of the GOBELINS factory at Paris in the 17th century. Tapestry design has now

reached a high degree of perfection and has generally followed parallel movements and styles in art. See also pp.1301, 1302, 1350.

Tapeworm, or taenia, parasitic flatworm found in the alimentary tract of vertebrate animals, including man. It has a tiny head (Scolex) with hooks and suckers and a long body of segments (proglottides), each having its own reproductive system. Intermediate hosts include cattle, fish and pigs. Human infection occurs when undercooked, infected meat is eaten. Length: 1mm (0.04in) to 15m (50ft). Phylum Platyhelminthes. Class Cestoda. See also pp.2, 17.

Tapias, Antonio (1923-), Spanish painter whose early works show the influence of Paul KLEE and Torres Garcia. In his later ABSTRACT works he specialized in texture painting, often using sand and plaster. See also pp.1762, 1762.

Tapioca. See CASSAVA.

Tapir, any of several species of nocturnal, plant-eating, hoofed mammals native to forests of tropical South America and Malaysia. It has a large head, a long, flexible snout, a heavy body, short legs and a tiny tail. The Malayan tapir (*Tapirus indicus*) has a striking half-white, half-black coat, whereas New World species are dark brown. Length: to 2.5m (7.5ft). Family Tapiridae; genus *Tapirus*. See also pp.87, 95, 95, 312, 314-315, 314.

Tapu, MAORI form of TABOO.

Tar, complex mixture of HYDROCARBON compounds, derived from wood, coal and other organic materials by heating them with little or no air, then condensing the tar from the distilled vapours. Coal tar is a major source of hydrocarbons for the synthesis of pharmaceuticals, pesticides and plastics. Cruder tar compounds are used for road surfacing and protecting timber against rot and pests.

Tarabulus. See TRIPOLI, LEBANON; TRIPOLI, LIBYA.

Tara Hill, ancient seat of the Uí Neill kings of Ireland until the 6th century, in County Meath about 35km (22 miles) NW of Dublin. Only earthworks remain of Thomas MOORE's "Tara's Halls", venue of the triennial convention, the Feis of Tara.

Taranaki, New Zealand district in W North Island that includes some of the country's richest dairy land. Chief town: New Plymouth. Area: 9,710 sq km (3,750 sq miles).

Taranto, city in SE Italy, 80km (50 miles) SSE of Bari, on the Gulf of Taranto. Founded in 8th century BC, it was a leading city of MAGNA GRAECIA, submitting to Rome in 272 BC. It was destroyed by Arabs in AD 927, but rebuilt by the Byzantines in 967. Industries: steel, chemicals, fishing, food processing and shipbuilding. Pop. (1979) 247,681.

Tarantula, large hairy wolf spider of S Europe, once thought to inflict a deadly bite which would cause madness. The bite is not, in fact, dangerous to man. It spins no web, but chases and pounces on its prey. Length of body: to 2.5cm (1in). Family Lycosidae; species *Lycosa tarantula*. The name is also applied to the sluggish, dark, hairy spiders of the SW USA, Mexico and South America. Many species burrow and feed on insects, and occasionally small birds, amphibians or mice. Length of body: to 5cm (2in). Family Theraphosidae; genera *Aphonopelma* and *Eurypelma*. See also pp.2, 3.

Tarawa, atoll in the W Pacific Ocean; the capital of the Republic of Kiribati, formerly the Gilbert Islands. Located in the N central part of the group, it is the trade centre for the islands. Exports include phosphates, copra and mother-of-pearl. Pop. 22,148.

Targum, term meaning interpretation, designating the Aramaic paraphrases of the Old Testament usually supplemented by a commentary, made necessary because of the decline of Hebrew as the Jews' normal language. First produced in Babylon and Palestine several centuries before the Christian era, the targum treats all Old Testament books except Daniel, Nehemiah and Ezra, and is a compilation of explanatory matter added to Scripture in synagogue worship.

Tariff, tax placed on imports either as a

percentage of the value of the item (ad valorem tariff) or per unit (specific duty). Tariffs may be used to discourage the import of certain types of goods or to adjust for price differentials in order to allow the home country's products to be competitive. Tariffs may be levied on particular goods, regardless of the country they came from, or may be specifically aimed at discriminating among goods on the basis of country of origin. General tariff agreements are made between countries every few years in the General Agreement of Tariffs and Trade (GATT).

Tarim, river in W China. It is formed at the confluence of the K'a-shih-ka-erh and Yarkand rivers, flowing E then SE into the Tarim basin in the region of Lop Nor. Length: 2,027km (1,260 miles).

Tariq ibn-Ziyad (died c.720), Muslim soldier who led the Moorish invasion of Spain. He captured Gibraltar in 711 with an army of 7,000 and then proceeded to conquer Cordoba, Toledo and other parts of Spain. The name "Gibraltar" derives from the Arabic Jebel-al-Tariq, which means the Mount of Tariq.

Tarkington, Newton Booth (1869-1946), US novelist, best known for his descriptions of middle-class life in small mid-western towns. His works include *The Gentleman from Indiana* (1899); *The Magnificent Ambersons* (1918) and *Alice Adams* (1921), for which he received Pulitzer Prizes.

Tarleton, Sir Banastre (1754-1833), British cavalry soldier who distinguished himself in campaigns in the War of AMERICAN INDEPENDENCE (1776-82). He served under Lord CORNWALLIS, becoming Lieutenant-Colonel of the BRITISH LEGION in 1778. After the surrender at YORKTOWN in 1781, he returned to Britain and became an MP in 1790.

Tarleton, Richard (d.1588), English actor and jester, one of the Queen's company of actors, who specialized in yokel roles and was said to be a model for Bottom in Shakespeare's *A Midsummer Night's Dream*. He was a favourite with Queen Elizabeth I and published *Tarleton's Toys* (1576).

Tarmac, mixture of gravel and tar mainly used to cover roads, drives and paths. It is hard wearing, impervious to water and provides an ideal surface for the rubber tyres of motor vehicles. See also ASPHALT; pp.522-523.

Taro, large tropical plant native to the Pacific Islands and SE Asia and cultivated in other parts of the world for its edible tuberous root. In Hawaii it is eaten as poi. Family Araceae; species *Colocasia esculenta*. See also LILY; p.683.

Tarot, forerunner of modern PLAYING CARDS, believed to have originated from the Middle East in antiquity. In Europe they were first used in Italy in the 14th century. Tarot packs contain 78 cards: the 56-card Minor Arcana, which correspond to the modern pack, and the 22 picture cards of the Major Arcana. They are used for fortune-telling and as meditation symbols by occultists.

Tarpon, tropical marine game fish. Blue and bright silver, it has a long, deeply forked tail. Its eggs develop into eel-like, transparent larvae, and then metamorphose into the juvenile form. Length: to 180cm (6ft); weight: to 150kg (300lb). Main species are the small Pacific *Megalops cyprinoides* and the large Atlantic *M. atlanticus*. Family Elopidae.

Tarquinius Superbus ("Tarquin the Proud") (c.534-510 BC), Etruscan, traditionally the seventh and last king of Rome. Largely known only in legend, he is said to have been a despot. See also p.1224.

Tarragon, perennial plant with liquorice-flavoured leaves used fresh or dried in salads, pickles, etc. Family Compositae; species *Artemisia dracunculoides*. See also pp.686, 709, 709.

Tarsals, one of the three sets of bones in the foot, in human beings the bones that make up the ankle. They are strong compact bones arranged so that the foot can be rotated (to a limited extent) in any direction. In front of the tarsals are the METATARSALS, which form the framework of the foot's two flexible arches.

Tar sands, porous, often black, rocks, such as limestones, sands and sandstones found on the surface. They contain deposits of ASPHALT in the spaces between the grains and commonly have a distinct odour of tar. Extensive deposits are found in North America, primarily in Alberta and Texas. Estimates of the amount of asphalt contained in these deposits are extremely high, but its high viscosity makes extraction difficult.

Tarsier, any of several species of nocturnal primates of Indonesia. They are small, squat animals with large eyes, long tails and monkey-like hands and feet; they have silky grey-brown coat fur. Tarsiers live in trees and feed chiefly on insects. Family Tarsiidae; genus *Tarsius*. See also pp.102, 102, 312, 313.

Tarski, Alfred (1902–), us mathematician and philosopher, b. Poland, best known for his work on symbolic logic. After teaching at Warsaw University (1925–39) he moved to the USA to work at Harvard (1939–41) and Princeton (1941–42). From 1942 to 1968 he taught at the University of California. His publications include *Introduction to Logic* and *The Methodology of Deductive Science* (1936), *Logic, Semantics, Metamathematics* (1956) and *Cylindric Algebras* (Part 1, 1971).

Tarsus, city in s Turkey on the River Tarsus. Conquered by the Romans in 67 BC, it became a leading industrial and cultural centre. It was destroyed by the Arabs in AD 660 and rebuilt by them in 780. The Ottoman Turks took Tarsus in 1515. It is an agricultural market for citrus fruit and cotton grown in the area. Copper, chromium, zinc and coal are mined nearby. Pop. (1970) 78,033.

Tartaglia, Niccolò Fontana (1499–1557), Italian mathematician, the first to obtain a general solution to the cubic equation which lacks the simple term of the form $x^3 + ax^2 + bx + c = 0$. From 1534 he taught in Venice. He studied ballistics and published *Nova Scientia* (1537) and *Trattato di numeri et misure* (1556–60).

Tartan, specific type of plaid cloth, usually woollen. It was worn throughout Scotland and the North of England before becoming adopted by the clans of the Scottish Highlands, each clan having its own patterns. A tartan plaid has cross-bars of different colours and widths on a background usually red or green.

Tartar, unsightly encrustation on and between the teeth consisting of caked salivary secretion, food residue and various calcium and phosphate salts. Tartar that collects between the teeth and along the gums may cause inflammation of the gums, or GINGIVITIS, which can lead to PYORRHOEA and loss of teeth. See also p.1100.

Tartar ASSR, autonomous republic in the Russian SFSR, USSR; the capital is Kazan. The area was conquered by the Mongols of the GOLDEN HORDE in the 13th century. The land is dominated by rolling plains, drained by the Volga, Kama, Sviyaga and Vyatka rivers which are also used for irrigation and the generation of hydroelectricity. Cereals and flax are grown; brown coal, limestone and gypsum are quarried and the republic's manufactures include chemicals and machinery. It is also an important producer of oil and natural gas. Area: 94,000sq km (36,255sq miles). Pop. (1980) 3,454,000.

Tartaric acid, colourless, optically active organic compound, with the formula $(\text{CHOH})_2(\text{COOH})_2$. It is found in fruits and made from maleic anhydride and hydrogen peroxide or by enzyme action on a succinic acid. The acid is widely used in baking powder, cream of tartar, soft drinks and in the textile industry. Properties: s.g. 1.76; m.p. 171°C (340°F).

Tartars. See TATARS.

Tartarus, in Greek mythology, the deepest region of the earth, as far below as heaven was above, into whose depths the fallen TITANS were consigned by the victorious Olympian gods after their battle for OLYMPUS.

Tartrate, salt or ester of tartaric acid. Tartrates, such as potassium bitartrate (cream of tartar) and sodium bitartrate, are used

in baking powder, in the food industry and in tanning.

Tartu, Treaty of (1920), treaty between Estonia and the USSR. The USSR reaffirmed its recognition of Estonia's independence and granted the territory of Petsamo to Finland.

Tartuffe, Le (1669), three-act comedy by MOLIERE. A satire on hypocrisy and piety, the first version was banned after the performance for LOUIS XIV in 1664, as was the second in 1667. A third and final version was authorized in 1669.

Tarzan, fictional hero created by writer Edgar Rice BURROUGHS in 1912. Tarzan grew up with African apes after surviving an aircraft crash when a child and was able to communicate with and befriend wild beasts. He has been the subject of many films since 1918. The actor Johnny WEISSMÜLLER was probably the most famous Tarzan.

Tasaday, small group of isolated aboriginal people of the rain forests of s Mindanao in the Philippines, first discovered in 1971. They are food-gathering cave dwellers with a STONE-AGE culture.

Tashkent (Tashtent), capital of Uzbekistan (Uzbekskaja SSR), USSR, in the Tashkent oasis, watered by the River Chirchik. It was ruled by the Arabs from the 8th until the 11th century and came under the TIMURID Empire in the 13th century. The city was captured by the MONGOLS in 1361. Tashkent was captured by the Russians in 1865. The modern city is a terminus for road, rail and air routes and is the economic centre of the region. Tashkent is a market for cotton and cereals and has manufacturing industries that include textiles, chemicals, food-processing, machinery, paper, porcelain and furniture. Pop. (1980) 1,816,000.

Task force, temporary grouping of armed forces units under one commander for the purpose of carrying out a specific mission or operation.

Tasman, Abel Janszoon (1603–c. 1659), Dutch explorer. Sent by the Dutch EAST INDIA COMPANY to explore the coasts of Australia and New Guinea, he discovered New Zealand, Tasmania, Tonga and the Fiji Islands in 1642–43, but his voyages were regarded as economic failures by the company. See also pp.1602, 1602.

Tasmania, island state of Australia, separated from Victoria by the Bass Strait and bounded by the Pacific (E) and Indian (W) oceans. Tasmania is mountainous and forested, with small farms, although sheep rearing and dairy farming are important. The development of hydroelectric power has stimulated the growth of manufacturing; principal industries are metallurgy and textiles. Mineral deposits include copper, tin, zinc, lead and iron ore. The chief cities are Hobart, the state capital, and Launceston.

The island was discovered by Abel TASMAN in 1642 and named Van Diemen's Land. Capt. James COOK visited it in 1777 and claimed it for the British, who established a penal colony there. Tasmania was part of New South Wales until 1825, when it became a separate colony; it was federated as a state of the Commonwealth of Australia in 1901. Area: 68,332sq km (26,383sq miles). Pop. (1979) 417,700. See also p.1974.

Tasmanian devil, carnivorous marsupial with a bear-like appearance; it is found only in the forest and scrub of Tasmania. It has a smooth black-and-brown coat with small white areas on the face, forelegs and rear. It feeds mainly on a wide variety of animal food, including carrion. Length: to 80cm (31in). Species *Sarcophilus harrisii*. See also pp.90, 308–309.

Tasmanian wolf, also called thylacine, largest carnivorous marsupial. It became extinct on the mainland of Australia because of relentless hunting, but a few specimens are believed to have survived in forested areas of Tasmania. It has a wolf-like appearance, but its coat is marked with transverse dark stripes on the back, hindquarters and tail. Species *Thylacinus cynocephalus*. See also pp.90, 308, 343.

Tasman Sea, part of the Pacific Ocean between Australia and New Zealand. Sydney is the principal port on the sea, which was

named after the Dutch explorer Abel TASMAN. Width: approx. 1,930km (1,200 miles).

Tassili-n-Ajjer, plateau region in s Algeria, the cliff faces of which are covered in prehistoric paintings of scenes depicting people and animals. Discovered in the 19th century, the age and meaning of the paintings remain a mystery, as does the identity of the artists.

Tasso, Torquato (1544–95), Italian Renaissance poet who, after an unhappy childhood, wrote the epic *Rinaldo* (1562) and joined the ESTE court at Ferrara. There he wrote *Aminta* (1573) and his masterpiece *Gerusalemme liberata* (1574). After 1577 he became psychologically disturbed and was confined intermittently in a hospital from 1579 to 1586 where he continued writing. See also p.1416.

Taste, gustatory faculty and one of the five SENSES. In human beings the taste buds of the tongue differentiate four qualities: sweetness, saltiness, bitterness and sourness. The finer distinctions in taste are made by the nose. See also p.142.

TAT. See THEMATIC APPERCEPTION TEST.

Tatars, or Tartars, Turkic-speaking people of central Asia. In early medieval times the name Tatar was given to many different Asiatic invaders of Europe. The Tatar tribe proper originated in E Siberia and, mixed with the MONGOLS, invaded Europe in the early 13th century under GENGHIS KHAN. They were converted to Islam in the 14th century and, after the collapse of the Mongol empire, the Tatars living in the Crimea (Little Tartary) came under the Ottoman Empire and those in Tartary (Siberia) came under Muscovite control. By the 16th century they had become settled agriculturalists, and many Tatars achieved eminence within Russia. Crimea became part of Russia in 1783. In the mid-20th century there were more than 5 million Tatars.

Tate, Phyllis (1911–), British composer. She is famous chiefly for chamber music, including a sonata for clarinet and cello (1949) and a string quartet (1952). She also wrote a concerto for saxophone and strings and the operas *The Lodger* (1960) and *Dark Pilgrimage* (1963) for television.

Tate Gallery, art gallery at Millbank, London. It was built in 1897 through the generosity of Sir Henry TATE, and has since been extended. It houses collections of British painting and sculpture from the 16th century and of foreign art from 1800. The gallery is particularly rich in works by TURNER, BLAKE and the modern French painters. Its many temporary retrospective exhibitions are widely admired.

Tati, Jacques (1908–), French film actor and former music-hall artist, b. Jacques Tatischeff. After acting in several short comedy films in the 1930s, he directed his own *L'Ecole des factieux* (1947). His distinctive style of visual humour was developed in *Monsieur Hulot's Holiday* (1953), *Mon Oncle* (1958), *Playtime* (1968) and *Traffic* (1971).

Tatler, The, English periodical launched in 1709 by Richard STEELE, who later collaborated with Joseph ADDISON. It was originally intended to entertain and to provide a news service, but later adopted a moral tone, particularly in its examination of the ideal gentleman. A society magazine of the same name is still published today.

Tatlin, Vladimir Evgrafovich (1885–1953), Soviet sculptor. Influenced by CUBISM and FUTURISM, in 1913 he instigated the abstract style CONSTRUCTIVISM, in which he used industrial materials such as metal and glass. See also p.1686.

Tattersall's, British racehorse auctioneers, founded in London in 1766 by Richard Tattersall. These large bloodstock auctions are now held at fixed times annually at Newmarket. It is not to be confused with Tattersall's Committee, which settles questions relating to transactions on horse-racing.

Tattooing, colouring or marking the skin for cosmetic or religious purposes. Pigment is inserted under the skin's surface by means of needles, or scars are made

Tarsiers are well suited to an arboreal life with their long hind limbs and tails.

Le Tartuffe, or The Impostor, was criticized by the Church when first performed.

Tasmanian devils have strong jaws and teeth and can kill small kangaroos.

Torquato Tasso is considered to be the finest poet of the late Italian Renaissance.

Tatum, Arthur ("Art")

Tattooing is an ancient and widespread practice: it was widely employed in Polynesia, especially among the MAORI, and also in Japan.

Tatum, Arthur ("Art") (1910–56), us jazz pianist. Almost blind since birth, he established a standard for jazz piano technique that has never been surpassed. He made his first recording in 1932 and was soon renowned.

Tatum, Edward Lawrie (1900–75), us geneticist and biochemist. He shared the 1958 Nobel Prize in physiology and medicine with George BEADLE and Joshua LEDERBERG for his part in the discovery that genes act by regulating specific chemical processes, a basic principle explaining how genes determine the characteristics of an organism.

Tauber, Richard (1892–1948), British tenor, b. Austria. He studied in Germany, made his debut in 1913 and sang in opera and concerts throughout Europe, and first performed at London's Covent Garden in 1931. He was best known for his performances in operettas, especially those of Franz LEHAR.

Tauber-Arp, Sophie (1889–1943), Swiss painter and sculptor. She was active in the DADA movement from 1916 to 1920. In 1921 she married Jean ARP, with whom she occasionally collaborated on various decoration and design projects.

Tau Ceti, main-sequence yellow star in the constellation of Cetus. It is only slightly smaller and cooler than the Sun and it is relatively close to the Solar System. Characteristics: apparent mag. 3.5; absolute mag. 5.7; spectral type G8; distance 11.9 light-years. See also pp.978, 1055.

Taung skull, remains of a prehistoric hominid identified in 1924 by Raymond Dart in South Africa. Subsequent discoveries of further specimens, mainly by Robert Broom and J. T. Robinson, showed it was an intermediate stage between man and ape, *Australopithecus africanus*, and important in the fossil record of the evolution of man. See also pp.110–111.

Taunton, county town of Somerset, sw England, on the River Tone. It is a market town and railway junction. Industries: textiles, clothing, precision instruments. Pop. (1971) 37,373.

Taupo, Lake, largest lake in New Zealand, in central North Island, drained by the Waikato River. Area: 606sq km (234sq miles); depth: 159m (522ft).

Taurid meteor showers. See METEORITE.

Taurus, or the Bull, in astronomy, northern constellation on the ECLIPTIC between Aries and Gemini; it contains the Pleiades and Hyades stellar clusters and the Crab Nebula. The brightest star is the 1st-magnitude Alpha Tauri (ALDEBARAN). See also pp.1006, 1006, 1012, 1012, 1894, 1894–1895.

Taurus, the Bull, in astrology, the second sign of the Zodiac. The Sun is in Taurus from about 20 April to 20 May. See also pp.1894–1895.

Taurus Mountains (Toros Dagları), chain of mountains in s central Turkey, extending 564km (350 miles) roughly parallel to the Mediterranean Coast of s Asia Minor; its NE extension is called the Anti-Taurus. The mountains have important deposits of minerals. The highest peak is Ala Dag, 3,724m (12,218ft).

Tautomerism, property exhibited by a compound that exists as a mixture of two ISOMERS in equilibrium. If either isomer is removed from the mixture, the equilibrium is momentarily disturbed but is restored by the spontaneous conversion (due to the migration of an ION or FREE RADICAL) of some of the remaining isomer into the removed type.

Taverner, John (c.1495–1545), English composer. He wrote for only a short period, chiefly during his four years at Cardinal College (now Christ Church), Oxford (1526–30). He composed mostly church music – such as masses, Latin services and motets – but also some secular works for a song book (1530) of Wynken de Worde.

Távora, João Franklin da Silveira (1843–88), Brazilian novelist. He contributed to the growth of regionalism in the Brazilian novel. His best-known novel is *Caballero* (1876).

Tawney, Richard Henry (1880–1962), British social historian, author of *The Acquisitive Society* (1920) and *Religion and the Rise of Capitalism* (1926). He was president of the Workers' Educational Association (1928–44) and professor of economic history at the London School of Economics (1931–49).

Taxes and taxation, compulsory money payments of various kinds made by members of a civil society to supply the expenditure of public authorities. Taxes are of two chief kinds, direct and indirect. Direct taxes are levied on income (wages, salaries, rents, profits, interest, dividends) and capital. Indirect taxes are levied on commodities (goods purchased, imported goods, entertainment) and services (road tax). Local rates are a form of indirect taxation levied on the assessed value of property. The fundamental purpose of taxation is to defray government expenditure on defence, the social services, administration and the repayment of public debts. But taxation may be used to effect certain social and economic purposes, such as reducing the inequality of wealth in a community, reducing or increasing the purchasing power of consumers according to the requirements of industrial policy, checking the flow of imports or exports in order to alter the balance of trade and influencing the rate and direction of capital investment.

In Britain the origins of taxation lie in the special grants of money occasionally made to the monarch in the Middle Ages. Feudal monarchs were expected to "live of their own", to pay the expenses of their establishments from the income derived from their property and the regular dues owed to them as feudal lords. But for special purposes, especially the cost of defence and foreign wars, limited grants of money, called "grants in aid" or "subsidies", were frequently voted to the king by his council, later by Parliament. Such grants were known as "extraordinary taxation". They might be either direct (the poll tax) or indirect (taxes on movable property). The two most common forms of grants in aid were SCUTAGE and TALLAGE, especially in the 13th and 14th centuries, when extraordinary taxation became a regular feature of royal policy. It was chiefly royal requests for scutage and tallage which established the principle, the very heart of the English constitution, that no subject shall be obliged to pay money to the government except by popular consent. And from that principle flowed its great corollary, that the redress of grievance shall precede the voting of supplies.

In modern British history direct taxation far outweighed indirect taxation until the latter part of the 19th century. Most of the government's revenue in the 17th and 18th centuries came from the large wall of tariff duties which was broken down slowly by the introduction of FREE TRADE budgets in the 19th century. Some came also from the land tax, a direct tax levied on the owners of real property. INCOME TAX was first imposed in 1799 as a temporary expedient for supplying the cost of the Napoleonic Wars. It was repealed in 1816 and re-introduced in 1842, since when it has been permanent and is now the central source of government revenue.

Taxi, vehicle available for hire, driven by the owner or his employee. It is named after the taximeter, an automatic instrument that records the fare due. Taxis are sometimes called "cabs" after the cabriolet, a horse-drawn vehicle.

Taxidermy, process of preparing, preserving and mounting skins of animals and birds so that they still appear life-like. It is used mostly to prepare specimens for display in museums.

Taxonomy. See CLASSIFICATION.

Tay, river in central Scotland. It rises in the Grampian Mts and flows SE, to enter the North Sea through the Firth of Tay near Dundee. It is the longest river in Scotland and has the largest drainage basin, 6,216sq km (2,400sq miles) in area. Length: 193km (120 miles).

Taylor, Alan John Percivale (1906–), British historian whose interests include diplomatic history and the interpretation of modern wars. Among his books are *Bismarck, The Man and His Statesman* (1955) and *The Origins of the Second World War* (1961). He has reached a wide audience through many appearances on television.

Taylor, Cecil (1933–), us jazz pianist. He was one of the pioneers of free improvisation (ie improvisation related to no prescribed harmonic, melodic or rhythmic guidelines), and his style has been influential, although he has frequently encountered opposition from conservative critics.

Taylor, Elizabeth (1932–), us film actress, b. Britain. She began her career as a child star under contract to MGM, attracting attention as the heroine of *National Velvet* (1944). She has remained in demand by producers, making films which include *A Place in the Sun* (1951), *Cat on a Hot Tin Roof* (1958) and *Who's Afraid of Virginia Woolf?* (1966), for which she received an Academy Award.

Taylor, Frederick Winslow (1856–1915), us industrial engineer who was known as the father of scientific management. He developed management methods for many industries, especially steel mills. Among his writings is *The Principles of Scientific Management* (1911).

Taylor, Sir Geoffrey Ingram (1886–1975), British physicist and meteorologist. He specialized in FLUID MECHANICS, and made significant contributions to the understanding of turbulence and diffusion in fluids.

Taylor, Sir Robert (1714–88), British architect. Until about 1753 his main interest was in sculpture, for which he received a number of commissions. As an architect his most distinguished appointment was the surveyorship of the Bank of England. Although much of his work there no longer exists, the building was PALLADIAN in style.

Taylor, Zachary (1784–1850), 12th President of the USA (1849–50), a hero of the Mexican War who died in office after serving only one year of his term. His father was a wealthy planter, but Taylor had little formal education. He received an army commission in 1808 and fought in the War of 1812. In 1845, as commander of us troops on the Texas border, he made a foray into disputed territory and set off the Mexican War. As President, he advocated the early admission of California and New Mexico as states. He was succeeded by Vice-President Millard Fillmore.

Tay-Sachs disease, rare hereditary disorder of fat metabolism. It is characterized by an accumulation of gangliosides in the central nervous system, resulting in severe mental deficiency, blindness and death at about three years of age.

Tayside, region in s central and e Scotland; created in 1975 from the former counties of ANGUS, KINKROSS and most of PERTH. Perth and Dundee are the principal cities. Area: 7,665sq km (2,959sq miles). Pop. (1975 est.) 402,000.

Tbilisi (Tiflis), capital of Georgia (Gruzinskaja SSR), USSR, on the upper Kura River. It was founded in AD 455 or 458 as the capital of an ancient Georgian kingdom and was ruled successively by the Persians, Byzantines, Arabs, Mongols and Turks, coming under Russian rule in 1801. Tbilisi's importance lies in its location on the trade route between the Black Sea and Caspian Sea; it is the administrative and economic focus of modern Transcaucasia. Fruit is grown outside the city and industries include beer, wine, spirits, furniture, printing, machine building, and machine tools. Pop. (1975) 1,080,000.

Tchaikovsky, Peter Ilyich (1840–93), Russian late ROMANTIC composer who studied at the St Petersburg Conservatory. He wrote nine operas, four concertos, six symphonies, three ballets, overtures, chamber music and numerous other works. His music includes the orchestral pieces *Romeo and Juliet* (1880) and *Slavonic March* (1876). He also wrote the music for the ballets *Swan Lake* (1876), *The Sleeping Beauty* (1889) and *The Nutcracker* (1892). He died nine days after

the premiere of his sixth and most popular symphony, the *Pathétique* (1893). See also pp.1582, 1583, 1599, 1754, 1758.

Tchelitchev, Pavel (1898–1957), Russian painter who made use of PERSPECTIVE distortion and multiple images. In the 1920s he designed stage sets. After he settled in the USA in 1934, his works became more complex, the best known being *Leaf Children* (1939) and *Hide and Seek* (1940–42).

Tea, family of trees and shrubs with leathery undivided leaves and five-petalled blossoms. Among 500 species is *Camellia sinensis* (*Thea sinensis*), the commercial source of tea. Cultivated in moist tropical regions, tea plants can reach 9.1m (30ft) height, but are kept low by frequent picking of the young shoots for tea leaves; the flowers are white. The leaves are dried immediately to produce green tea and are fermented before drying for black tea. Family Theaceae. See also pp.704, 705.

Tea Act (1773), legislation by the British Parliament removing export duties on tea. To give relief to the EAST INDIA COMPANY, which was failing financially, the Act withdrew duty on tea exported to the colonies and enabled the company to sell tea directly to the colonies without first going to Britain. Colonial merchants were undersold and the Act led directly to the BOSTON TEA PARTY. See also p.1540.

Teaching machine, device incorporating an electronic screen on which is relayed programmed instruction. The pupil's progress may be monitored through the use, within the relayed material, of items requiring a response from the pupil via the machine's keyboard. Depending on the complexity of the machine, a negative answer may be supplied, further explanation may be given, or an evaluation of the pupil's capacity may be made from which the machine may choose any of several possible paths by which to continue presentation. See also p.469.

Teak, tree, native to s India, Burma and Indonesia, valued for its hard yellowish-brown wood. Teak wood is water-resistant and takes a high polish and is therefore widely used for furniture and in shipbuilding. Height: 45m (150ft). Family Verbenaceae; species *Tectona grandis*. See also pp.714, 715.

Teal, small, widely distributed river duck that often has bright plumage. The blue-winged teal (*Anas discors*) of North America is a fast, strong flyer. Teal dabble, or feed from the surface of the water. Family Anatidae, genus *Anas*. See also p.80.

Team handball, indoor or outdoor game. The outdoor version is played by two teams of 11 players on a field and between two goals similar in size to those used in Association FOOTBALL; the indoor version is played on smaller sized courts with smaller goals, by two teams of 7 or 5 players. The object of the game is to score goals by throwing an inflated leather ball, 58–60cm (23–24in) in diameter, over the goal line. Such throws must take place outside a prescribed area near the goal. Players may keep possession of the ball only for three seconds at a time, and little physical contact is allowed.

Teamsters, full name the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, trade union founded in the USA in 1903. The largest us union, representing lorry drivers and related trades, the Teamsters have been the subject of several government investigations for suspected illegal activities.

Teapot Dome Scandal, in us history, fraudulent leases of the naval oil reserves at Teapot Dome and Elk Hills in South Dakota, granted by Secretary of the Interior Albert B. Fall to oilmen Harry Sinclair and Edward Doheny in 1921–22. Fall collected more than \$300,000 from the two leases.

Tear gas, chemical compound known as a lachrymator, a gas or aerosol that causes an excessive flow of tears and blinds and incapacitates temporarily without causing permanent injury. Such gases, as used by military and civil authorities, are generally

made of chlorine and bromine derivatives of acetone and acetophenone.

Tea rose, hybrid rose originating from plants imported from China. The fragrant, long-blooming, double flowers range from white to yellow to pink. Family Rosaceae; species *Rosa odorata*.

Tears, fluid that moistens the surface of the CORNEA of the eye secreted by the lacrimal glands. It is antibacterial in nature, and also improves the optical properties of the eye by forming a thin, smooth film on the cornea and compensating for slight surface imperfections.

Teasel, any of several species of plants that grow in Europe, the Middle East and the USA. A prickly, woodland plant, it has hollow leaf bases that trap water, and densely clustered, bristly, egg-shaped flower heads. Species include *Dipsacus fullonum*, a 1.8m (6ft) tall perennial with purple flowers. Family Dipsacaceae.

Technetium, radioactive metallic element (symbol Tc) of the second transition series. It was first made in 1937 by bombarding MOLYBDENUM with DEUTERONS, and was the first element to be synthesized. No technetium has been found in the Earth's CRUST, although it is present in some stars. Properties: at.no. 43; at.wt. 98.9062; s.g. 11.5; m.p. 2,172°C (3,942°F) b.p. 4,877°C (8,811°F); most stable isotope Tc^{97} (half-life 2.6×10^6 yrs). See also TRANSITION ELEMENTS.

Technicolor, trade name of the colour film process used in most modern motion pictures. The process has existed in four versions since its development in 1915. A primitive Technicolor was first seen in 1918, and in 1933 Walt DISNEY used three-colour Technicolor for the animated film *Flowers and Trees*.

Technocracy, theory that engineers and scientists should have effective power in economic and social life. The term was coined in the USA in 1919 for the phrase "rule by technicians" and enjoyed brief popularity in the 1930s. The theory gained currency in France in the 1960s when it was identified with ideas of the French socialist thinker Claude Henri de SAINT-SIMON (1760-1825).

Technology, systematic study of the methods and techniques employed in industry, research, agriculture and commerce. More often the term is used to describe any application of scientific discoveries in the production of mechanisms and in the solution of problems which confront man.

Technology, Ministry of (Mintech), former British government department. Set up by the Labour government of 1964, the ministry took over the industrial research functions of the old department of Scientific and Industrial Research. In 1967 the Ministry took over part of the Ministry of Aviation and in 1969 acquired some of the duties of the Board of Trade and Department of Economic Affairs. It also acquired responsibility for atomic energy research. Mintech was abolished by the Conservatives in 1970.

Tecton, architectural team founded in the early 1930s by Berthold Lubetkin, whose members included Denys LASDUN and Michael Dugdale. The team became recognized particularly for its work for London Zoo (1933-38); the style of freely moulded concrete anticipated its use in the 1950s.

Tectonics, study of the Earth's CRUST in terms of the large, moving "plates" which support the continents and float on the liquid rock beneath. Tectonics also studies the effect of this movement on the rims of continents, ocean basins and mountain ranges (which result from crustal movement compression). See also pp.198, 268, 269.

Tedder, Arthur William, 1st Baron (1890-1967), British air marshal. He served with the Royal Flying Corps in WWI and from 1941 to 1943 commanded the RAF in the Middle East, where his method of pattern bombing became known as "Tedder's carpet".

Teepee. See TEPEE.

Teeside, former county borough in Durham and the North Riding of Yorkshire, NE England; since 1974 it has been

part of CLEVELAND. The area included Middlesbrough and Stockton-on-Tees. It is an industrial area producing steel, chemicals and ships.

Teeth, hard, bone-like protuberances rooted to the jaws of vertebrates, used for chewing food, defence or other purposes. Humans have 16 pairs of teeth when adult, each jaw having four INCISORS, two CANINES, four PREMOLARS and six MOLARS. Children's teeth lack the premolars and four molars. The incisors and canines are used for cutting and the molars and premolars for crushing and grinding food. The teeth of all vertebrates have a similar structure consisting of three layers. Mammalian teeth have an outer layer of hard ENAMEL. The middle layer consists of DENTINE, a bone-like substance that is capable of regeneration. The core of a tooth contains pulp which is softer and provides nutrition for the dentine. See also pp.147, 1100-1101, 1100-1101.

Teflon. Trade name for the plastic polytetrafluoroethylene. See PTFE.

Tegucigalpa, capital of HONDURAS, located in the S central part of the country. Products include sugar, textiles and cigarettes. Pop. (1970 est.) 232,276.

Tehran (Teheran), capital of Iran, 105km (65 miles) S of the Caspian Sea. It was the residence of the QAJAR rulers in the 17th century and became the capital in 1788. Renovation and modernisation of the city began in 1797 under Fath Ali Shah. Tehran is now one of the most important cities in the Middle East. It contains the Gulistan or Rose Garden Palace which houses the Peacock Throne, brought from India by Nadir Shah in 1739. It is the industrial and commercial centre of the country; manufactures include cement and textiles. Tehran is also famous for the exporting of carpets. Pop. (1976 est.) 4,496,159.

Teignbridge, county district in central DEVON, England, created in 1974 under the Local Government Act (1972). Area: 675sq km (261sq miles). Pop. (1979 est.) 95,200.

Teilhard de Chardin, Pierre (1881-1955), French JESUIT philosopher and palaeontologist. He worked in China between 1923 and 1946 and shared in the discovery of PEKING MAN. His efforts to reconcile scientific views of evolution with Christian faith led to his being asked by his religious superiors not to publish his philosophical works. His best-known work, *The Phenomenon of Man*, was finished in 1938 but only published posthumously.

Teixeira, Pedro (c.1575-1640), Portuguese explorer. Commissioned by the governor of Maranhão in 1637 to undertake an expedition up the AMAZON River, he navigated the Amazon and Napo as far as Quito, Ecuador.

Te Kanawa, Kiri (1948-), New Zealand opera singer, of Maori origin. One of the best-known New Zealand sopranos, she became contracted to the Royal Opera House, Covent Garden, in 1970. See also p.1735.

Tektites, generally dark, glassy objects, ranging in diameter from 40 microns to 2mm (microtektites) and larger (to 10cm) believed to be of either lunar origin or formed from splashes of liquefied rock during meteorite impact on Earth.

Tel Aviv-Jaffa (Tel Aviv-Yafo), largest city in Israel, on the Mediterranean Sea. It was founded in 1909 as a Jewish suburb by the Jewish population of Arab Jaffa. By 1921 Britain had established it as a separate all-Jewish community. During the British PALESTINE mandate (1923-48), Tel Aviv's immigrant Jewish population grew rapidly. It served as the seat of the transitional government and legislature between 1948 and 1950 (when Israel's capital was moved to Jerusalem) and it was incorporated with Jaffa in 1950. Products include pharmaceuticals, electrical appliances, textiles, clothing, chemicals, paper, plastics, leather, glass and precision instruments. Pop. (1979) 336,300.

Telecine, machine for the direct projection of film on television. It can be used for the insertion of filmed material into live programmes or to transmit complete feature or documentary films. See also p.641.

Telecommunications, the technology involved in the sending of information over a distance. This information may be in various forms, such as digital signals, sounds, printed words or images. The sending is achieved through TELEGRAPH, TELEPHONE and RADIO and the medium may be wires or electromagnetic (radio) waves, or combinations of the two. Telegraphy was developed in the mid-19th century and radio arrived at the end of the century. TELEVISION made its advent in the mid-20th century. There are two basic types of message: digital, in which case the message to be sent is converted in simple coded pulses and then sent (as in MORSE CODE); and analogue, in which the message - for example, a voice speaking - is converted into a series of electrical pulses which are similar in waveform to the modulations of the original message. See also pp.634, 636, 638, 640, 646.

Telegraph, any communications system that transmits and receives visible or audible coded signals over a distance. The first, optical, telegraphs were forms of SEMAPHORE. Although most modern devices are electrically operated and connected by wires or cables, telegraph messages can be sent by radio waves, microwaves and communication satellites. Pioneering work was performed by many, but credit for the electric telegraph and its code is generally given to Samuel MORSE who, in 1844, inaugurated the first public line between Washington and Baltimore. In 1866 the first permanently successful telegraph cable was laid across the Atlantic, and in 1875 Thomas A. EDISON invented a method of transmitting several messages simultaneously over the same wire. See also p.634.

Telekinesis, in parapsychology, the movement of objects, apparently without contact, that cannot be explained by any known physical or natural means. See also PSYCHOKINESIS.

Tel-el-Kebir, Battle of (1882), decisive victory, in the British occupation of Egypt, of the British army under Sir Garnet WOLSELEY over the Egyptian nationalists led by Arabi Pasha.

Telemann, Georg Philipp (1681-1767), German composer. He wrote more than 40 operas, 600 overtures and 44 settings of the Passion. His church music, of more historical importance than his operas, shows Telemann's technical mastery.

Telemetry, system of transmitting data, usually measurements, over a distance, such as to the ground from a spacecraft via electromagnetic (radio) waves. In this example, solar cells or chemical batteries provide power for operating high-gain directional antennae on the spacecraft. These beam high-frequency (but low-power) radio waves to large receiving stations on the ground. See also pp.1022-1025.

Teleology, type of cosmology explaining final causes. In contrast to mechanism, teleology explains the past and present in terms of the future.

Teleostei, group of fish that have a skeleton composed at least in part of bone, instead of cartilage. There are 40 orders and 20,000 species - most of the existing species of fish. See also OSTEICHTHYES.

Telepathy, direct transmission and reception of thoughts. It has never been scientifically proved conclusively that such transference happens, although telepathy has been extensively investigated. Tests have included card-guessing, in which one experimenter (unseen by another) chooses cards at random from a set bearing pictorial symbols; his fellow experimenter attempts to write down or draw the sequence of symbols. As with other tests on ESP, the occasional experimenter produces results which are somewhat outside those that would be expected statistically, but this cannot be said to constitute proof. See also pp.1892, 1893.

Telephone, instrument that communicates speech sounds by means of wires or microwaves. In 1876 Alexander Graham BELL invented the prototype, which employed a diaphragm of soft iron which vibrated to sound waves. These vibrations caused disturbances in the magnetic field

of a nearby bar magnet, causing an electric current of fluctuating intensity in the thin copper wire wrapped around the magnet. This current could be transmitted along wires to a distant identical device which reversed the process to reproduce audible sound. Later improvements separated the transmitter from the receiver, and replaced the bar magnet with batteries. See also p.636.

Telephone exchange, central switching system in which incoming telephone calls are routed to their destinations, either by telephone operators or, increasingly, by automatic mechanisms that are called into operation by direct dialling codes. See also pp.636-637, 636-637.

Telephony, microwave, telecommunications technique which uses microwave radio to transmit telephone messages between stations. The microwaves act as carrier for the telephone signals which are used to modulate them, and enable more than 2,500 simultaneous telephone conversations. See also p.637.

Telephoto, camera lens with a long focal length. A true telephoto lens has a focal length longer than the physical length of the lens, as opposed to a long-focus lens, in which the focal length is equal to the physical length. There is no theoretical upper limit to the focal length possible but sheer size tends to limit the actual focal lengths practicable. For a 35mm camera, any lens with a focal length of more than about 80mm may be regarded as a telephoto lens. For larger format cameras the focal length may be as much as 1,000mm. Even greater lengths are possible with mirror lenses, which overcome some of the difficulties of very long conventional lenses. See also p.631.

Teleprinter, machine having a keyboard similar to that of a TYPEWRITER, on which messages can be typed and telegraphed to distant receivers, and which acts also as a receiver, printing out incoming messages.

Telescope, instrument for enlarging a distant object or studying electromagnetic radiation from a distant source. Telescopes are categorized according to the area of the electromagnetic spectrum with which they deal. There are two types of optical telescope: refracting and reflection. The main light-gathering parts or objective, is a lens in a refractor and a mirror in a reflector. The diameter of this lens or mirror is known as the aperture of the telescope. The point at which the objective concentrates the light from the source is its focus, and the distance from the focus to the objective is its focal length. The light-gathering power of a telescope is proportional to the square of the aperture, its ability to resolve, or separate into distinct images two closely spaced objects, is also proportional to the aperture - the larger the aperture, the better the resolution. The earliest invention of the refracting telescope is unknown but there is evidence that it could have been as early as 2000 BC. Extensive use of refracting telescopes, however, followed Hans Lippershey's invention (1608) and GALILEO's telescope (1609). The main disadvantage with refracting telescopes was lens aberration, in which faults in curvature and variations in density caused a single lens to produce a partly distorted image. At first regarded as insurmountable, this problem may be solved by so combining lenses that their aberrations cancel each other out. This initial obstacle was first overcome with the construction of reflecting telescopes and the first astronomical reflector was built by Sir Isaac NEWTON in 1668. There was also a limit to the size of lenses: the world's largest refractor has a diameter of 1m (39in), which is much less than that of one of the largest reflectors (that at Mount Palomar, California, USA, has an aperture of 508cm; 200in). Radio telescopes are complex electronic systems which analyse radio waves from beyond the Earth. Incoming radio waves are collected from a small area of the sky and focused at the centre of a large parabolic, steerable dish aerial. The signals are then amplified and analysed. The first radio telescope was built in 1937 by Grote Reber in the USA. Radio

Telesphorus, Saint

interferometers are arrays of smaller dishes which are tuned in sequence, thus permitting the investigation of even more distant radio sources. X-ray telescopes consist of a pair of mirrors, one a paraboloid surface and the other a hyperparaboloid surface. See also pp.918, 920, 922.

Telesphorus, Saint (d.c.136), pope (r.c. 125 to 136). St Telesphorus, who succeeded St Sixtus I, is said by St IRENAEUS to have observed Easter not on the 14th day of the month Nisan, as was the practice in parts of Asia Minor, but on the following Sunday.

Teletype. See TELEPRINTER.

Television, system for the transmission and reception of visual images by radio waves or, sometimes, cable. In a television camera the images are first converted from light rays to electrical signals. These are then amplified and transmitted as very high frequency (VHF) or ultra-high frequency (UHF) radio waves. Typically a television channel has a bandwidth of 5MHz (5 million cycles per second). On their reception these signals are amplified and then converted to light again in a CATHODE RAY TUBE.

The basis of the television camera is an image orthicon tube. Light rays are focused on to thin sheets of photoelectric material, which emits electrons in proportion to the amount of light striking it. Behind these sheets is a positively charged target which emits additional electrons. Between them is a fine mesh screen which collects the secondary emissions from the target. The net result is that the target has a positive charge in proportion to the amount of light in the original scene. At the rear of the orthicon tube is an electron gun emitting a beam of electrons which scans the target from side to side and from top to bottom. Because the target is composed of positively charged areas, the incident electron beam is deflected back to the electron gun, where the electrons are collected by a multiplier, which also amplifies the intensity of the returning beam. The strength of this beam depends on the positive charges on the target and thus the original scene is converted into electrical signals.

The receiver operates in reverse to the camera. In colour television there are three synchronized image orthicon tubes in the camera, one for each of the three primary colours - red, blue and green. The tube of the receiver has three electron guns and the face of the tube is covered with a mosaic of fine phosphors in groups of three, each emitting only red, blue or green light when struck by a beam. These primary colours merge on the face of the screen to reconstitute the originally transmitted image. See also pp.640-641.

Telex, acronym for Teletype-writer Exchange Service, a telegraphic system using telephone lines through which direct current pulses representing characters typed on a typewriter keyboard are sent. See also pp.635, 635.

Telford, Thomas (1757-1834), Scottish civil engineer; builder of bridges, canals, docks, harbours, waterways and roads. Among his many notable achievements are the 177m (580ft) suspension bridge over the Menai Strait, connecting Anglesey with mainland Wales, begun in 1819; the Ellesmere Canal, connecting the English rivers Dee, Mersey and Severn (1793); and the CALEDONIAN CANAL in Scotland. He was a founder, and first president, of the Institution of Civil Engineers. See also pp.522, 524, 533, 536, 1475.

Tell, William, legendary Swiss hero, leader in the 14th-century war of liberation against Albert I of Austria. For refusing to doff his cap to Albert's steward, Gessler, he was made to shoot an arrow through an apple placed on his son's head.

Teller, Edward (1908-), US physicist, b. Hungary. He left Europe and settled in the USA in 1935. During WWII he worked on atomic bomb research with Enrico FERMI and later pioneered the development of the hydrogen bomb. He received the 1926 Enrico Fermi Award.

Tellurium, metalloid element (symbol Te) of group VIA of the periodic table, dis-

covered in 1782. It occurs naturally and in sylvanite (Ag, Au)Te₂; its chief source is a by-product of the electrolytic refining of copper. It is used in some alloys and semiconductor devices. Properties: at.no. 52; at.wt. 127.6; s.g. 6.24; m.p. 449.5°C (841°F); b.p. 989.8°C (1,814°F); most common isotope Te¹³⁰ (34.48%).

Telstar, first active communications satellite, launched on 10 July 1962. It contained a microwave radio receiver, amplifier and transmitter for relaying telephone and television signals. It operated for about 18 weeks, failed for 5 weeks, and worked again for a further 7 weeks before failing for good. See also pp.638, 1022.

Temin, Howard Martin (1934-), US biologist. He shared with D. Baltimore and R. DULBECCO the 1975 Nobel Prize in physiology and medicine for his studies of the interaction between tumour viruses and the genetic material of the cell.

Tempera, painting medium used extensively during the Middle Ages, made of powdered pigments mixed with a base of egg yolk, fig sap or glue. It was used mostly for painting wooden altarpieces and was applied to a smooth surface coated with gesso. The religious paintings of the Byzantine period are early examples of tempera painting. By the 13th century, Italian painters such as CIMABUE, GIOTTO and UCCIO had refined the technique. Tempera dries quickly and is applied with a sable brush, one thin layer on another so that the finished effect is semi-opaque and luminous. Some modern painters, including Ben SHAWN and Andrew Wyeth, have revived the technique.

Temperament, general emotional tone or mood of a person. Psychological research has shown that a person's basic temperament is probably partly genetically determined. See also pp.1122, 1123.

Temperance movement, organized effort to promote moderation in, or abstinence from, the consumption of alcohol, which was considered to encourage sickness, poverty and crime. It probably began in the USA in the early 19th century and, with assistance from churches, spread to Britain and continental Europe.

Temperate zones, either of two regions of the Earth. The northern temperate zone lies between the Arctic Circle and the Tropic of Cancer, and the southern zone lies between the Tropic of Capricorn and the Antarctic Circle. See also pp.254-255.

Temperature, measure of the hotness or coldness of an object. Strictly, it is a parameter describing the number of energy states available to a substance or system. Two objects placed in thermal contact exchange heat energy initially but eventually arrive at thermal equilibrium where both are said to have the same temperature, ie each is losing and gaining heat at equal rates so that neither has a net gain or loss of heat. At equilibrium, the most probable distribution of energy states of the atoms and molecules composing the objects has been attained. At high temperatures, the number of energy states available to the atoms and molecules of a system is large; at lower temperatures, fewer states are available (molecules become locked into position and liquids change to solids). At a sufficiently low temperature, all parts of the system are at their lowest energy levels, the ABSOLUTE ZERO of temperature. See also TEMPERATURE SCALE; pp.842-847.

Temperature, body, internal temperature of an animal. In warm-blooded animals such as birds and mammals, body temperature is maintained within narrow limits regardless of the surrounding air temperature. This is accomplished by muscular activity, operation of cooling mechanisms and normal basal metabolism. In man, the normal body temperature is close to 37°C (98.6°F), but this may vary with degree of activity, reaching 40°C (104°F) during exercise, and falling below normal during sleep. In so-called cold-blooded animals, such as reptiles, body temperature varies between wider limits, depending on the surrounding air temperature.

Temperature measurement, method by which TEMPERATURE is specified. Several

TEMPERATURE SCALES have been established, each of which uses a property (such as electrical resistance or volume expansion) of a thermometric substance (such as a metal wire or a liquid) to define a unit of temperature. The constant-volume gas thermometer is the standard thermometer. Its temperatures are expressed in KELVIN degrees, but it is inconvenient for practical purposes. The International Practical Temperature Scale (IPTS) was adopted in 1968 to provide scientists and technologists with a more convenient scale. The IPTS defines 0°C (32°F) as 273.16°K and defines a number of reference temperatures including the boiling point of oxygen, 90.20°K (-182.96°C, -297.33°F), the melting and boiling points of water and the melting points of zinc, silver and gold. It also specifies the thermometers that are used to span the range. At higher temperatures, eg of furnaces, optical pyrometers which detect variation in colour are used. See also pp.842-843, 846-847.

Temperature scale, graduated scale of degrees for measuring temperature. The establishment of any temperature scale requires: a thermometric parameter which varies linearly with temperature (eg the volume of a gas at constant pressure, or the expansion of a liquid in a tube); two or more fixed points (readily reproducible reference points such as the boiling and the freezing points of water); and the assignment of arbitrary divisions (called degrees) between the fixed points. Gas, alcohol, mercury, electrical resistance and colour have been used as thermometric parameters. Common temperature scales include FAHRENHEIT, CELSIUS (formerly the centigrade) and the KELVIN (or absolute); these are abbreviated to °F, °C and °K (or K). The Fahrenheit scale originally used as fixed points the freezing point of water (taken to be 32 fahrenheit degrees) and the human body temperature (96 degrees, although later found to be 98.6). The interval between these was divided into 64 degrees; by extrapolation, the boiling point of water is 212°F. The Celsius scale uses 0°C and 100°C as the freezing and the boiling point of water, respectively; the interval is divided into 100 degrees. Zero on the Kelvin scale (approx. -273°C, -459°F) coincides with absolute zero, the lower limit of temperature; the degree Kelvin (kelvin) represents the same temperature difference as the degree Celsius. To convert Fahrenheit to Celsius: C = 5(F-32) ÷ 9 to convert Celsius to Fahrenheit, F = (9C+5) ÷ 32.

Tempering, metallurgical process of hardening and toughening alloys by a cycle of heating and quenching. Tempering is particularly important for the production of tool steels. It works by producing an alloy which is a stable solid solution of small grain size. This can be achieved only by adjusting the crystal structure of an alloy in a calculated way by precise temperature gradients.

Tempest, The, play (1611) by William SHAKESPEARE. The play deals with the theme of reconciliation, and its setting was influenced by contemporary exploration of the Americas.

Templates. See KNIGHTS TEMPLAR.

Template, or templet, mould or pattern for making repeated copies of an object. It is usually cut from thin sheets of metal, wood or paper. In architecture, a template is a supporting structure such as a beam placed over a doorway.

Temple, Henry John. See PALMERSTON, VISCOUNT.

Temple, Shirley (1928-), US film actress. While still a child she starred in a series of films. These included *The Little Colonel* (1935), *Rebecca of Sunnybrook Farm* (1938) and *The Blue Bird* (1940). She made several films in the late 1940s and then, as Shirley Temple Black, went into politics. She became US Ambassador to Ghana in 1974.

Temple, William (1881-1944), British churchman. He was chaplain to GEORGE V (1915-21), Canon of Westminster (1919-21), Archbishop of York (1929-42) and Archbishop of Canterbury (1942-44). He was a strong and out-

spoken advocate of social reform and also worked for the union of Christian Churches.

Temple, Sir William (1628-99), English statesman, Ambassador to The Hague in 1668. He negotiated the TRIPLE ALLIANCE and in 1677 arranged the marriage of Princess Mary to WILLIAM OF ORANGE.

Temple, in Judaism, the place of worship for Jews in Jerusalem. The first temple, built by King SOLOMON, lasted for more than 400 years until destroyed in 586 BC by the Babylonians. It contained the ARK OF THE COVENANT. It has been replaced by SYNAGOGUES. The term "temple" is also used for Hindu, Buddhist and Sikh places of worship.

Temple, The, the name given to the Middle Temple and the Inner Temple, London, two of the four Inns of Court and originally the seat of the chivalrous order of the Knights Templar. See also INNS OF COURT.

Templer, Field Marshal Sir Gerald Walter Robert (1898-1979), British soldier who was a divisional commander during WWII and later stemmed a Communist terror campaign in Malaya during the early 1950s. From 1955 to 1958 he was Chief of the Imperial General Staff.

Tempo, speed at which a piece of music is performed, usually indicated on a score, in western music, by Italian words, such as *allegro*, fast, and *adagio*, slow.

Temporal lobes, prominent lobes of the cerebral cortex that, in humans, lie directly below the temples. The temporal lobes are directly involved in the interpretation and generation of language. See also BRAIN; pp.128, 128.

Tenant, person who rents property from another (the landlord) by a tenancy agreement or lease. The concept of tenancy is entrenched in common law, which recognizes different types of tenancy, but most are now defined by the terms of the agreement. Disputes between a tenant and a landlord in Britain may be referred to a Rent Tribunal.

Tench, freshwater food and sport fish of Europe and Asia, belonging to the carp family Cyprinidae. It has a stout, golden yellow body with small scales. It feeds on small animals and plants. Length: to 71cm (28in). Species *Tinca tinca*. See also p.743.

Ten Commandments, or Decalogue, the code of ethical conduct held in Jewish-Christian tradition to have been revealed by God to MOSES. Representing the moral basis of God's COVENANT with Israel, they appear in both EXODUS 20 and DEUTERONOMY 5, but with different phrasing. Commandments 1-4 exhort obligation and service to the one God, and commandments 5-10 require social responsibility from the individual.

Tender is the Night (1934), novel by F. Scott FITZGERALD. Dick Diver, a psychiatrist, falls in love with Nicole, whom he first met as a patient in a European clinic. After they marry their relationship becomes hollow, his life meaningless and he turns to drink and dissipation. See also p.1773.

Tendon, strong and flexible band of connective tissue that joins muscle to bone. See also p.148.

Tendrill, part of stem or leaf, a slender, thread-like structure used by climbing plants for support.

Tending, county district in NE ESSEX, England, created in 1974 under the Local Government Act (1972). Area: 337sq km (130sq miles). Pop. (1974 est.) 107,700.

Tenebrism (from Italian *tenebroso*, murky), style of painting by 17th-century artists in Naples, Spain and The Netherlands, who painted in a very low key and emphasized contrasts of light and shade in imitation of CARAVAGGIO.

Tenerife, largest of the Canary Islands, Spain, in the Atlantic Ocean 64km (40 miles) WNW of Grand Canary Island; it is a mountainous island; its highest peak is Pico de Teide, 3,718m (12,198ft). Products: dates, sugar cane, palms, cotton. Industries: tourism, food processing. Area: 2,059sq km (795sq miles). Pop. 76,000.

Teniers the Elder, David (1582-1649),

Flemish painter who spent many years in Italy, finally settling in Antwerp. Father of David TENIERS the YOUNGER, he painted religious subjects.

Teniers the Younger, David (1610–90), Flemish GENRE painter who became court painter to the Governor of The Netherlands in 1651. A prolific artist, he painted small precise pictures, his favourite subjects being quiet scenes from peasant life.

Tennant, Charles (1768–1838), British industrial chemist who in 1799 invented a process for manufacturing bleaching powder from chlorine and slaked lime.

Tennessee, state in SE central USA, between the Appalachian Mts and the Mississippi River. In the E are the Great Smoky Mts and the Cumberland Plateau. To the W is the Nashville Basin, a bluegrass region, where livestock are reared – the region is particularly noted for breeding horses. The land is generally not suitable for agriculture but W Tennessee, between the Tennessee and Mississippi rivers, has fertile soil and cotton is grown there. Wheat, hay and tobacco are also grown in the state. Mineral deposits include zinc and coal. Major industries are chemicals, textiles, clothing, food processing and electrical machinery. The chief cities are Nashville (the state capital) and Memphis.

The region was first visited by Spaniards in the 16th century. The French followed a century later but their claim was ceded to Britain in 1763. First permanent settlement was established in 1769. In 1790 the US government created the territory south of the Ohio corresponding to Tennessee, which was admitted to the Union six years later. In the AMERICAN CIVIL WAR opinion in Tennessee was divided, although the Confederacy claimed most supporters. Several major battles were fought in the state, which seceded in 1861. Area: 109,411 sq km (42,244 sq miles). Pop. (1980 est.) 4,590,750. See also p.2161.

Tennessee Valley Authority (TVA), agency established (1933) during the NEW DEAL as a long-term regional planning project. It was authorized to build dams on the Tennessee River to prevent flooding, produce electricity and enable eroded farmland to be reclaimed.

Tennessee walking horse, light saddle horse, originally bred in the 19th century in Tennessee, USA. The coat may be chestnut, black or golden. Height: to 1.6m (5.2ft) at the shoulder; weight: to 540kg (1,200lb).

Tenniel, Sir John (1820–1914), British painter, illustrator and cartoonist, best known for his illustrations of Lewis CARROLL's *Alice's Adventures in Wonderland* (1865) and *Alice Through the Looking-Glass* (1872).

Tennis. See LAWN TENNIS.

Tennis Court, Oath of the (1789), defiant vow, made by members of the Third Estate of the French ESTATES-GENERAL on 20 June 1789, not to separate until a constitution had been established. The name derives from the indoor tennis court in which they met.

Tennis elbow, form of BURSETIS in which there is an inflammation of the lubricating sac over the joint, caused by repeated irritation.

Tennyson, Alfred Lord (1809–92), British poet who was Poet Laureate from 1850 to 1892. His verse, noted for its sensuous use of language, takes its subject matter from (among other things) Arthurian legends and classical mythology. He lived for several years on the Isle of Wight. It includes *The Lady of Shalott* (1833), *The Lotus Eaters* (1883), *In Memoriam* (1850) and *Maud* (1855). See also p.1576.

Tenochtitlán, AZTEC city founded in AD 1325 on an island in Lake Texcoco, Mexico. Drainage reduced the surrounding swampland to fertile plots surrounded by water, and Tenochtitlán expanded to a metropolis of 500,000 people. It was destroyed by the Spanish, who later built Mexico City on the ruins. See also pp.1365, 1370, 1370.

Tenor, range of the human voice, falling below CONTRALTO and above BARITONE. It is the highest natural male voice apart

from the COUNTER-TENOR.

Tenpin bowling, type of bowling that uses ten pins set on a triangular base, and a heavy ball with holes to enable the participant to hold it with one hand. It originated in England and its rules were standardized in the USA in 1895.

Tenrec, burrowing, insectivorous mammal of Madagascar and the Comoro Islands. The common tenrec (*Tenrec ecaudatus*) is a nocturnal, highly prolific animal with a spiny coat like that of a hedgehog. It is the size of a small domestic cat. Family Tenrecidae.

Tense, in grammar, classification of a verb indicating the time of an action – present, past or future – in relation to the time of speaking.

Tentacle, any slender, flexible organ of an animal, most notably those of the OCTOPUS, capable of feeling and grasping.

Ten Thousand Immortals, in ancient Persia, name given to the élite of the army. Skilled in the art of fighting with bows and arrows, they made a decisive contribution to the Persian victory in the campaign against Egypt under the leadership of DARIUS THE GREAT (548–486 BC). See also pp.1192–1193.

Tenzing Norgay (Norgay) (c.1914–), Tibetan mountaineer who went on several expeditions to Mt EVEREST in the mid-1930s. In 1953 he and Edmund HILLARY became the first men to reach the summit of the mountain.

Teotihuacán, ancient city located about 48km (30 miles) N of Mexico City. It dates from c.100 BC and flourished until c.AD 700. Built by an Olmec-based culture, the city was laid out in a grid pattern centered on the Street of the Dead. The Pyramid of the Sun, the Temple of Quetzalcoatl and the Pyramid of the Moon dominate the E, S and N limits, respectively. Excavations have uncovered sophisticated murals and stylized stone masks. See also pp.1179, 1179, 1304.

Tepee, or teepee, moveable home of North American Indians, especially those of the plains. It consisted of a hide stretched over poles arranged to make a cone.

Tequila, Mexican alcoholic drink distilled from the fermented juice of the AGAVE plant. It contains 40 to 50% alcohol.

Te Rangī Hiroa. See BUCK, SIR PETER.

Te Rauparaha (c.1768–1849), New Zealand chief and warrior who is famous for his military exploits during the tribal wars of the 1920s and 1930s.

Terbium, metallic element (symbol Tb) of the lanthanide group, first isolated in 1843, its chief ore is monazite (a phosphate). The element is used in semiconductors. Properties: at.no. 65; at.wt 158.9254; s.g. 8.234; m.p. 1,360°C (2,480°F); b.p. 3,041°C (5,506°F). Most common isotope Tb¹⁵⁹ (100%).

Terborch, Gerard (1617–81), Dutch painter, best known for his expressive miniature portraits and small interiors with figures, rendered in a NATURALISTIC style. His careful handling of textures of cloth, such as satin, can be seen in *Gallant Conversation* (pre-1655, often known as *Parental Admonition*).

Terbrugghen, Hendrick (1588–1629), Dutch painter. During his travels to Italy, he was influenced by CARAVAGGIO's style. He painted religious subjects, such as the *Calling of St Matthew* (1621) and the *Crucifixion with the Virgin and St John* (1625). He was also a genre painter. Such later works as *Jacob and Laban* (1627) were characterized by a light and delicate colour range.

Teredo, also called shipworm, any of about 15 species of small bivalve MOLLUSCS that bore into wood. It has a worm-like body with the halves of the shell being greatly reduced and modified to act as a drill. It spends its life in submerged wood, doing considerable damage to ships' hulls and wooden pilings. Length: to 30cm (12in). Family Teredidae; genus *Teredo*. See also p.22.

Terence (c.190–159 BC), properly Publius Terentius Afer, Roman author of comedy. He was a slave in Rome where he was educated and freed by his master, the senator Terentius Lucanus. Six of his comedies

survive and include *Andria*, *Phormio* and *Hecyra*. He is noted for his deep interest in character and refined style.

Teresa of Avila, Saint (1515–82), Spanish CARMELITE nun. She played a great part in the COUNTER-REFORMATION. Her literary works, including an autobiography and the meditative *Interior Castle* (1577), led Pope PAUL VI to make her the first woman Doctor of the Church in 1970.

Tereshkova, Valentina Vladimirovna (1937–), Soviet cosmonaut and the first woman in space. She travelled in Vostok 6, launched in June 1963, and spent 71 hours in space. Later in the same year she married Andrian Nikolayev, another Soviet cosmonaut.

Terminator, boundary between the sunlit and dark sides of a planet or satellite. With a body lacking an atmosphere, such as the Moon, the terminator is distinct, although often broken up because of reflections from craters or mountains. Bodies with atmospheres have less well-defined terminators because atmospheric scattering causes twilight. See also p.928.

Termite, social insect found throughout the world in subterranean nests and above-ground mounds. Termites are popularly but incorrectly called "white ants". They have a caste system, with a king and queen guarded and tended by soldiers, workers and nymphs. They can be distinguished from ants by the lack of a narrow waist. Length: 2–22.5m (0.08–0.9in); queens: to 10cm (4in). Order Isoptera. See also pp.37, 40, 299, 303, 306, 316.

Terms, University, in Britain, division of the academic year into three terms between October and June. They are traditionally known as Michaelmas (at Oxford, Cambridge and others), Trinity (at Oxford and others) and Hilary (at Oxford and Dublin). See also LAW TERMS.

Tern, also called sea swallow, any of several species of graceful seabirds that live throughout the world. It is usually white and grey with a darker head, and has a pointed bill, long pointed wings, a forked tail and webbed feet; it dives for fish and crustaceans. After a long migration it lays its eggs in a scraped depression in the ground. Length: to 55cm (22in). Family Laridae; genus *Sterna*. See also pp.74, 335.

Terpenes, group of unsaturated organic chemicals related to ISOPRENE. They occur in most essential oils and are colourless liquids. Examples are pinene, the chief ingredient of turpentine, and limonene, which is found in the oils of citrus fruits.

Terracette, horizontal ledge formed along the side of a hill by the gradual movement of soil downwards under the influence of weathering and gravity. Terracettes are usually about 1–5m (3–17ft) in width. They form in layers and give a hillside a stepped appearance. See also p.222.

Terracing, in agriculture, technique involving the building of horizontal or sloping ridges along the contours of hills. This practice traps moisture and prevents the erosion of the soil, and is employed in regions where arable land is scarce.

Terracing, in geology, the process of deposition or erosion which produces step-like formations on a slope. Alluvial terracing is usually caused by periodic reductions in the area of the flood-plain of a river. See also p.221.

Terracotta, form of porous, unglazed, usually reddish, fired clay used in building, sculpture and pottery. It was first used by ancient civilizations when stone was not available. The term is applied more specifically to figurines made of terracotta.

Terrapin, any of several species of aquatic TURTLES that live in fresh or brackish water in the USA and South America, especially the diamondback terrapin (*Malaclemys terrapin*). Its diet consists mainly of small animals and vegetable matter. Length: to 23cm (9in). Family Emydidae. See also pp.66, 67.

Terrier, any of several breeds of dog. It was originally trained to dig out game. Referred to as early as the 14th century, it has been used to hunt badgers, foxes, weasels and rats. When the quarry is located, the terrier or terriers are sent

Tennyson is regarded by many as the greatest poet of the Victorian era.

Teotihuacán, or "City of the gods" was a commercial and religious centre.

Hendrick Terbrugghen; detail from *A Singer with his Lute*, painted in 1624.

Terns breed in large colonies and are often found on warm oceanic islands.

Terrigenous deposits

Ellen Terry; this detail of a portrait by Sargent shows her as Lady Macbeth.

Test Ban Treaty, signed in 1963, sought to ban nuclear testing in the atmosphere.

Testis; the numerous tubules in each testis produce reproductive spermatozoa.

Texas has a wealth of industry, much of it located in Houston, the largest city.

down to dig it out of its burrow. Separate breeds emerged in 19th-century England, and include the SEALYHAM TERRIER, FOX TERRIER, MANCHESTER TERRIER, SCOTTISH TERRIER and BEDLINGTON TERRIER. Larger breeds such as the KERRY BLUE TERRIER, AIREDALE TERRIER and IRISH TERRIER are used as guard and police dogs.

Terrigenous deposits, accumulations of sand, silt or mud that form in the sea near land as a result of EROSION.

Territorial Army, former British organization for home defence. Founded in 1908 as the Territorial Force, its name was changed to Territorial Army in 1922. It recruited part-time volunteers who were given training in basic military skills. It merged with the other defence forces 1939-47. In 1967 it was replaced by the Territorial and Army Volunteer Reserve.

Territory, in animal behaviour, the restricted life space of an organism. It is an area selected for mating, nesting, roosting, hunting or feeding and may be occupied by one or more organisms and defended against others of the same, or a different species. The area may be defended or indicated by noise-making, chemical scent, physical displays or aggression. Many invertebrates and most vertebrates display this behaviour.

Terry, Dame Ellen Alice (1847-1928), British actress. She made her debut, aged nine in *The Winter's Tale*, and worked with Sir Henry IRVING for 24 years, touring the USA with him.

Tertiaries, in the Roman Catholic Church, lay people belonging to the third rank of religious orders, who take less severe vows than monks and nuns. Originally, in the 13th century, they were women attracted by the humanitarian rather than the contemplative aspects of religious orders, but they now include people of either sex. Other religions with monastic ideals, such as Buddhism, include comparable groups.

Tertiary Period, earlier division of the CENOZOIC PERIOD, lasting from 65 million to about 2 million years ago. It is divided into four epochs, starting with the Eocene, the earlier part of which is sometimes called the Paleocene, followed by the Oligocene, Miocene and Pliocene. Early Tertiary times were marked by great mountain-building activity (Rockies, Andes, Alps and Himalayas). Both marsupial and placental mammals diversified greatly. Archaic forms of carnivores and herbivores flourished, along with primitive primates, bats, rodents and early whales. See also pp.268, 269.

Tertis, Lionel (1876-1975), British viola player. He introduced technical innovations for the making of the viola, and arranged many violin compositions for the instrument.

Tertullian (Quintus Septimius Florens Tertullianus) (c.160-c.230), Roman writer. He developed a systematic approach to theology and Christian APologetics, and helped to make Latin the official language of Christian theological writing. His works include *Apologeticus De spectaculis* and *De anima*.

Terylene, POLYESTER synthetic fibre made by POLYMERIZATION of a GLYCOL with an organic acid. Its fibres are generally melt-spun through a metal spinneret. Terylene is particularly popular for shirt, dress and stocking fabrics. It is called Dacron in some countries.

Tesla, Nikola (1856-1943), us electrical engineer, b. Croatia, who pioneered the applications of high-voltage electricity. He developed arc lighting, generators of high-voltage alternating currents, the Tesla coil and a system of transmitting electric power without wires.

Tesla, SI UNIT of magnetic flux density equal to a density of one WEBER of magnetic flux per square metre.

Tessin, family of Flemish architects who worked in Sweden. Nicodemus the Elder (1615-81) built in the BAROQUE style, and served as royal architect. His son Nicodemus the Younger (1654-1728) studied with BERNINI in Rome.

Test Acts (1672), English laws intended to exclude Protestant dissenters and Roman Catholics from public offices. It required all candidates for such offices to

profess the established religion of the Church of England. Not until the 1870s was the legislation finally repealed.

Testator, person who makes a WILL.

Test Ban Treaty (1963), agreement signed in Moscow by the USSR, and USA and Britain not to conduct tests of nuclear weapons in the atmosphere, in space, under water nor in any place where the radioactive debris ("fallout") could spread beyond national borders. All other countries were invited to sign the treaty. Nearly 100 nations signed it, but France and China continued to hold tests above ground.

Testicles. See TESTIS.

Testis (plural: testes), male sex gland, found as a pair located in a pouch, the scrotum, external to the body. The testes are made up of seminiferous tubules in which male (SPERM) are formed and mature, after which they drain into ducts, and are stored in the epididymis, from which they are discharged. See also pp.164-165, 164-165.

Test match, official international CRICKET match, played under the auspices of the International Cricket Council. The countries which play test cricket are England, Australia, the West Indies, New Zealand, India, Pakistan and South Africa (barred since 1970). The first test match was played between Australia and England at Melbourne in 1877.

Testosterone, STEROID HORMONE produced mainly by the mammalian TESTIS. It is responsible for the growth and development of male sex organs and male secondary sexual characteristics. See also pp.154-155.

Tetanus, infectious disease of the central nervous system caused by the toxin secreted by the anaerobic bacterium *Clostridium tetani*. The symptoms are extreme stiffness, convulsions and painful muscular spasms, especially of the jaw muscles. This gives the disease its popular name "lockjaw". Tetanus has a high mortality rate but is preventable by immunization. See also p.1072.

Tetany, cramp, symptomatic of metabolic imbalance, in which the muscles of hands and feet contract rhythmically. Spasm may also occur in the larynx, causing difficulty in breathing.

Tethys, outermost of the four inner satellites (geosynclines) of the planet Saturn. Tethys lies at a distance of 294,760km (183,080miles) from Saturn and has a diameter of approx. 1,000km (600 miles). It has a mean sidereal period of 1.9 days. See also pp.962, 965, 965.

Tethys, Sea of, hypothetical sea or trough (geosyncline) which separated the Eurasian part from the African part of the supercontinent Pangaea during the Mesozoic period. The Mediterranean Sea may be regarded as a remnant of this geosyncline. See also pp.200-201.

Tétouan (Tetuan), city in N Morocco. A corsair base in the 14th century, it was rebuilt by Jewish refugees from Spain in 1492. Tétouan was the former capital of Spanish Morocco (1913-56). Today it is a popular tourist resort. Pop. (1971). 139, 105.

Tetrachloromethane. See CARBON TETRACHLORIDE.

Tetracyclines, broad-spectrum antibiotics effective against anaerobic STREPTOCOCCI and certain bacterial and RICKETTSIAL disorders.

Tetraethyl lead, colourless oily poisonous liquid, Pb(C₂H₅)₄. It is manufactured either by treating an alloy of lead and sodium with ethyl chloride or by the action of lead chloride on a GRIGNARD REAGENT. It is widely used in petrol as an anti-knock agent. Properties: s.g. 1.65; b.p. 200°C (400°F).

Tetrahedrite, sulphide mineral; composed of varying amounts of copper, iron, zinc, silver, antimony and arsenic sulphides, found in medium- to low-temperature ore veins. It displays cubic system well-formed tetrahedral crystals and also appears as masses. In colour it is metallic grey to black. Hardness 3-5-4; s.g. 4.9. It is an important ore of copper.

Tetrode, ELECTRON TUBE, or valve, that has a fourth electrode, a screen grid, between

the anode and the control grid; the cathode is the other electrode. Tetrodes are used in power amplification and oscillator circuits. See also pp.884-885.

Tetuan. See TETOUAN.

Teutonic knights, German military and religious order, whose Latin name was *Ordo Domus Sanctae Mariae Teutonicorum* (German order of the Hospital of St Mary). The order was founded c.1190 during the Crusades. It transferred its activities to E Europe in 1211, and in 1233 began the conquest of Prussia. The knights became wealthy through engaging in trade, and their power spread to the lands of the E Baltic and into central Germany. Defeated by the Poles and Lithuanians in 1410, the order lost power and territory until its virtual disintegration in 1525, when its grand master accepted the Reformation and proclaimed Prussia a secular duchy. See also pp.1299, 1299, 1311, 1311.

Te Wherowhero (1800-60), first MAORI king. Chief of the Ngati-Mahuta tribe, he was elected King in 1857, at a meeting at Ngaruawahia.

Te Wiata, Inia (1915-71), MAORI opera singer. He studied music in London, and took leading roles at Covent Garden.

Tewkesbury, Battle of (1471), Yorkist victory over the Lancastrians which ensured that EDWARD IV retained the English throne. The army raised on HENRY VI's behalf by Queen Margaret and their son Edward was routed.

Texas, state in SW USA, on the Gulf of Mexico; second-largest state in the country. Eastern Texas has pine-covered hills and cypress swamps; cotton and rice are the main crops and the timber industry is important. The rich oil-fields of E Texas are the mainstay of the economy, however. The Gulf coast has popular tourist resorts. Cattle are raised on the plains of the Rio Grande valley, from where the land rises to the Guadalupe Mts of W Texas and the Great Plains area of the Texas Panhandle in the N. Cotton and cereal crops are grown and cattle are raised. Oil has revolutionized the economy in this section of the state also, and industry has developed rapidly. The major Texan industries are oil refining, food processing, aircraft and electronics. Major cities are Austin (the state capital), Houston, Dallas and San Antonio.

The Spaniards explored the region in the first half of the 16th century; it became part of the Spanish colony of Mexico. By the time Mexico attained independence, many Americans had begun to settle in Texas. They revolted against Mexican rule and in 1836, after defeating the Mexican army, established the Republic of Texas, which was recognized by the USA in 1837. Eight years later Texas was admitted to the Union. It joined the Confederate States in 1861 and played an active role in the AMERICAN CIVIL WAR. Area: 692,405sq km (267,338sq miles). Pop. (1980) 14,228,383. See also p.2161.

Texel, one of the West Frisian Islands, NW Netherlands. Largest of the group, it is a popular tourist resort. Area: 184sq km (71sq miles). Pop. 11,394.

Textiles, fabrics produced from fibres by SPINNING and WEAVING. Fibres can be of natural origin - WOOL, COTTON, LINEN or SILK - or synthetic, such as RAYON, NYLON and the POLYESTERS. Fabrics made by hand, as in LACEMAKING, or by machine KNITTING are not strictly textiles (which are woven) but are used in a similar way, especially for clothing and furnishings. The adaptation of machinery to spinning and weaving in the 18th century opened the way to the textile industry and most textiles are now produced in factories. In the 20th century advances in textile manufacturing have included the development of flame-resistant and "easy-care" fabrics that do not crease easily. See also pp.148-149.

Textured Vegetable Protein, substitute for meat made from vegetables. The protein and fat content of vegetables such as the SOYA BEAN is made into strands, which are knitted together to form a product whose texture is similar to that of meat.

Teyte, Dame Maggie (1888–1976), British soprano. She studied at the ROYAL COLLEGE OF MUSIC, London, and made her operatic debut in Monte Carlo in 1907. She was famous for her interpretation of songs by FAURÉ, CHAUSSON and BERLIOZ.

Thackeray, William Makepeace (1811–63), British novelist and satirist. He became famous with *Book of Snobs* and *Vanity Fair* (1847–48), a satirical novel on upper class London society at the start of the 19th century. His other works include *Barry Lyndon* (1844), *Pendennis* (1848–50) and *The Virginians* (1857–59). See also pp.1574, 1575.

Thai boxing, spectacular form of boxing in which virtually anything seems allowed. The two gloved fighters in the five-round bouts may punch, knee, elbow, kick or leg throw each other, but use of the hips and shoulders is forbidden. Bouts are preceded by ritual ceremonies.

Thailand (Prathet Thai), kingdom in SE Asia; formerly known as Siam. Although Thailand has a fast-developing economy, it is still based largely on agricultural products. Rice accounts for 20% of exports. Rubber and maize are also important, and Thailand is the world's third largest producer of tin. Tourism is of increasing importance to the economy. The capital is Bangkok. Area: 514,000sq km (198,455sq miles). Pop. (1979 est.) 45,000,000. See p.2150.

Thalamus, area of the forebrain immediately above the HYPOTHALAMUS. Sometimes called the sensory-motor receiving area, it obtains impulses from sensory NEURONS and sends them to other structures in the brain, particularly areas of the CEREBRAL CORTEX. See also pp.128–129, 129.

Thalassemia, or Cooley's anaemia, hereditary genetic condition characterized by a deficiency of haemoglobin in the blood. It is prevalent in Italy, Greece, the Middle East, India, Thailand and China, and the mortality rate of victims is high.

Thalben-Ball, George Thomas (1896–), Australian organist and composer who spent most of his life in Britain. He was organist at the Temple Church, London (1919–30) and curator organist of the Royal Albert Hall in 1930.

Thalberg, Irving (1899–1936), US film producer. He was production head at UNIVERSAL PICTURES in 1919 and became president of the Mayer Company, later absorbed into MGM, in 1923. At the peak of his career he controlled all MGM productions and supervised the film career of his wife, Norma Shearer. Although demoted in the early 1930s, Thalberg produced some of MGM's most memorable films, including *The Mutiny on the Bounty* (1935) and *Camille* (1936).

Thales (c. 640 BC–c. 546 BC), Greek scientist and philosopher. One of the first known Greek scientists, he founded the Ionian school of natural philosophy which held that water was the substance from which all matter was formed. His studies in geometry include the discovery that the angles at the base of an ISOSCELES TRIANGLE are equal. See also p.1216.

Thalidomide, sedative and mild hypnotic drug whose use by women in early pregnancy was associated with the birth of babies with malformed and shortened limbs. It was extensively used in Europe from 1959 until 1961, and the incidence of malformations coincided with a decline in natural miscarriages. It is held that thalidomide caused the womb to retain fetuses that would normally have been rejected.

Thallium, metallic element (symbol Tl) of group IIIA of the periodic table, discovered in 1861. It is usually obtained as a by-product of processing zinc or lead sulphide ores. After roasting these ores thallium is found concentrated in the flue dust. Thallium is an extremely toxic compound. It is used in infra-red detectors and certain specialized glasses. Properties: at.no. 81; at.wt. 204.37; s.g. 11.85; m.p. 303.5°C (578°F); b.p. 1,457°C (2,655°F); most common isotope Tl²⁰³ (70.5%).

Thallophyte, obsolete term for a subkingdom of non-vascular plants containing primitive forms of plant life. They lack clearly differentiated roots, stems or

leaves and range in size from one-celled plants to 61m (200ft) SEaweeds. Asexual reproduction is by spores and sexual reproduction is by fusion of GAMETES. Chlorophyll-containing thallophytes are ALGAE, Euglenoids, Dinoflagellates and LICHENS; thallophytes lacking chlorophyll include BACTERIA, FUNGI and SLIME MOULDS. See also THALLUS.

Thallus, non-vascular plant body of a THALLOPHYTE. Usually flat or ribbon-shaped, it is not differentiated into root, stem or leaves. Examples of plants with a thallus are ALGAE, euglenoids, LICHENS and FUNGI.

Thames, principal river in England. It rises in four headstreams – the Thames, Churn, Coln and Leach – in the Cotswold Hills, E Gloucestershire, then flows E across S England and through London to enter the North Sea at The Nore. The river is navigable by barges below Lechlade, and it is tidal to Teddington. Above London the river is used mainly by pleasure craft and for recreational purposes, such as fishing. The Thames Conservancy Board, established in 1857, controls the freshwater river. The Port of London Authority (1908) administers the river below Teddington, in particular the port of London proper from London Bridge to Blackwall. There the river is navigable for ocean-going vessels below Tilbury. Length: 338km (210 miles).

Thamesdown, county district in NE Wiltshire, England; created in 1974 under the Local Government Act (1972). Area: 222sq km (86sq miles). Pop. (1979 est.) 143,800.

Thanet, county district in NE Kent, England, created in 1974 under the Local Government Act (1972). Area: 103sq km (40sq miles). Pop. (1974 est.) 117,600.

Thani, Sheikh Khalifah bin Hamad al- (1934–), ruler of Qatar from 1972. He was formerly head of the Security Forces, Minister of Education, Finance Minister and Prime Minister.

Thanksgiving Day, national holiday in the USA. Originating with the PILGRIM FATHERS in 1621, when they celebrated the first harvest of the PLYMOUTH COLONY, it was proclaimed an official holiday in 1863. Since 1941 it has been celebrated on the fourth Thursday in November. Canada celebrates Thanksgiving on the 2nd Monday in October of each year.

Thant, U (1909–74), Burmese diplomat, Secretary-General of the United Nations from 1962 to 1972. He was involved in settling major disputes, including civil war in the Congo (Zaire) in 1963 and in Cyprus in 1964, but was less successful in dealing with the VIETNAM WAR and the Middle East crises. See also pp.1730, 1784.

Thar desert (Great Indian Desert), region in NW India and SE Pakistan, between the Aravalli Mountains (E) and the River Indus (W). Area: 200,000sq km (77,000sq miles).

Thatcher, Margaret Hilda (1925–), British politician and leader of the Conservative Party. A research chemist and a barrister, she began her parliamentary career as MP for Finchley in 1959. She was chief opposition spokesman for education in 1969 and Secretary of State for Education and Science 1970–74. She defeated Edward Heath for the Party leadership in 1975 and became Britain's first woman Prime Minister in 1979. Her first years of office were marked by a distinctive new economic policy aimed at reducing inflation.

Thatching, craft of laying and plaiting vegetable stalks and leaves to make a roof for a hut or a house. English cottages are thatched with straw or with reeds, Norfolk reed being the type particularly favoured. In tropical countries palm leaves are generally used for thatching. Rot-proof man-made fibres can also be used.

Theatre. See DRAMA.

Theatre, building where drama is staged. Its architecture has evolved gradually from early times when ritual was most often performed out-of-doors. In medieval Europe, PAGEANTS and churches were utilized as dramatic venues; MYSTERY PLAYS were enacted on open carts. Renaissance architects such as PALLADIO were

commissioned to design private theatres with acoustics and perspective in mind. At the same time, popular OPEN STAGES had evolved in Shakespearean England. By the Restoration, however, the PROSCENIUM arch stage had become established as the only viable form of theatre. Pioneers such as William Poel (1852–1934) reacted against the limitations of late-Victorian realism, campaigning for open stages again to ensure that texts were not obscured by presentation. Since WWII, theatrical architecture has again stressed adaptability. The ROYAL SHAKESPEARE COMPANY redesigned their stages along open lines; at the NATIONAL THEATRE, the Cottesloe was designed as an experimental arena suitable for THEATRE-IN-THE-ROUND.

Theatre-in-the-round, form of theatrical presentation derived from the ancient arena stage. The audience is seated on all sides of the players, creating a sense of informality between the actors and the audience. This form of production has become popular in the 20th century.

Theatre of Cruelty, term adopted by Antonin ARTAUD that is often misunderstood. It was intended to embody Artaud's demand for a theatre in which the spectator became so involved with the characters that he left the theatre still sharing that experience.

Theatre of the Absurd. See ABSURD, THEATRE OF THE.

Theatre Workshop, drama company founded in 1945 by Joan LITTLEWOOD. It moved to the Theatre Royal, Stratford East, London, in 1953 and created controversy by staging a number of experimental and political plays. Littlewood was director until 1961 and it disbanded in 1964; it reformed in the early 1970s, under the direction of Gerald Raffles. Plays which it produced and transferred to the West End include *The Quare Fellow* (1956), *A Taste of Honey* (1958) and *Oh, What a Lovely War* (1963).

Thebaine, or paramorphine, ALKALOID drug, one of many present in OPIUM. It is a poisonous compound, with the formula C₁₉H₂₁NO₃, that may cause convulsions.

Thebes, city of ancient Greece; centre of Mycenaean power, which was destroyed c.1200 BC. Rebuilt, it again became powerful, forming alliances with Persia and later with SPARTA in the PELOPONNESIAN WAR. Thebes was victorious (371 BC) in a later clash with Sparta, but was almost destroyed in an uprising against ALEXANDER THE GREAT (336 BC) and fell to the Romans in 197 BC. See also pp.1202, 1205, 1206, 1214.

Thebes, ancient capital of Upper Egypt, called Wasi by the Egyptians. It flourished from earliest times, declining in the 10th century BC, and was sacked by the Romans in 30 BC. The well-preserved ruins of temples, obelisks and statues attract many tourists. See also pp.1167, 1181.

Thecodont, member of the Thecodontia, an order of early Mesozoic reptiles characterized by teeth set in deep sockets. See also pp.280, 280.

Theft, or larceny, dishonest appropriation of the property of another. A person is guilty of theft if he deprives another of property with the intention (or mens rea) of doing so.

Thegn, in Anglo-Saxon England, a man who held land from his lord in return for service and whose WERGILD was usually at least 1,200 shillings. The status was hereditary, and socially and economically varied – because a thegn's importance depended on that of his lord, who might be the king, an earl or even another thegn. See also pp.1288.

Theiler, Max (1899–1972), US microbiologist, b. South Africa, who was awarded in 1951 the Nobel Prize in physiology and medicine for his research into YELLOW FEVER. In the 1920s he developed a weakened strain of the virus causing yellow fever; he infected monkeys with the disease, transmitted the virus to mice then back to monkeys. This produced only mild symptoms and conferred full immunity on the last monkey in the chain. His later improved vaccine was widely used against yellow fever. See also p.1082.

William Thackeray's novels, especially *Vanity Fair*, are still widely read today.

Thalidomide, taken by pregnant women, resulted in the birth of malformed babies.

Thames; a view of England's most important river flowing quietly past Pangbourne.

Margaret Thatcher acknowledges applause at the 1976 Conservative Party Conference.

Theism

Theodolites are mounted on tripods and give accurate angle measurements.

Theodora: this detail from a Byzantine mosaic shows the first Empress Theodora.

Theodorakis combines traditional folklore and contemporary themes in his songs.

Thermae; remains of the rectangular Roman bathing pool at Bath, Somerset.

Theism, philosophical and theological systems which profess belief in the existence of one supreme being, who is the creator of all; he is perfect and merits man's worship. In most theistic systems man has a FREE WILL and religious doctrines are based on divine Revelation.

Thematic apperception test (TAT), in psychology, technique used to assess personality characteristics, introduced in 1935 by Henry A. Murray. The person to be tested is presented with a series of cards with pictures on them, and he or she must make up a story about the characters in each picture. The method assumes that people reveal their unconscious feelings and desires in their stories. See also p.1123.

Themis, in Greek mythology, the goddess of justice, daughter of URANUS and Gaea. Although a TITAN, she was honoured by the gods on OLYMPUS for her wisdom and foresight. She was the mother of the HORAE, goddesses of the seasons, and the FATES by ZEUS. Themis is depicted as a stern woman bearing a pair of scales.

Themistocles (c.528 BC–c.460 BC), Athenian statesman. He built up a powerful navy, planned the evacuation of Athens when the Persians invaded and formulated the battle plan for Salamis. See also pp.1204, 1204–1205.

Thenard, Louis-Jacques (1777–1857), French chemist who discovered HYDROGEN PEROXIDE and the porcelain pigment Thenard's blue. He worked with GAY-LUSSAC and wrote the standard chemical textbook of that time.

Theocracy, government by religious leaders in accordance with divine law. Theocracies were common in primitive societies and existed in ancient Egypt and the Orient. The Puritan colony of New England (1620–60) was predominately theocratic.

Theocritus (c.300–260 BC), Greek poet, regarded as the father of pastoral poetry. His work is noted for its humour, vivid expression and perceptive portrayal of contemporary life.

Theodolite, surveying instrument dating back to the 16th century, used to measure horizontal and vertical angles. Its modern form consists of a telescope (with crosshairs in the lens for accurate alignment) mounted to swivel in both directions and levelled with a spirit level.

Theodora, name of three empresses of the BYZANTINE EMPIRE. Theodora (c.500–48), wife of JUSTINIAN I, became joint ruler on his accession in 527. Her courage saved the imperial throne for her husband during the Nika political and religious revolt of 532. The second Theodora (d.867) ruled for 14 years as regent for her young son MICHAEL III after the death in 842 of her husband, the Emperor Theophilus. In 843 she restored the cult of the icons. Another Theodora (980–1056), daughter of CONSTANTINE VIII, became co-Emress after the death of Zoë and Zoë's husband, CONSTANTINE IX Monomachus, in 1055. She was the last ruler of the Macedonian dynasty. See also p.1276.

Theodorakis, Mikis (1925–), Greek composer. A student of MESSIAEN, his first work, the oratorio *Sinfonia*, was published in 1944. He has composed for films, theatre and ballet and has also written a number of song cycles, including *Ballads* (1975). He was elected to the Greek Parliament in 1964 and imprisoned (1967–70) for political activities.

Theodore, name of two popes. Theodore I (r.642–49), a Greek born in Jerusalem, led the opposition to the MONOTHELITE heresy and refused to recognize Patriarch Paul of Constantinople. Theodore II (d.897) was pope for less than three weeks in 897.

Theodore of Tarsus (c.602–690), Greek prelate and organizer of the Church in much of England. He was appointed Archbishop of Canterbury in 668.

Theodoric I (d.451), king of the Visigoths. The son of ALARIC, he ruled from 419 until his death in the Battle of Châlons-sur-Marne, while fighting with the Romans against the Hun army led by ATTILA.

Theodoric of Prague (fl. 4th century),

Bohemian artist who painted in a severe, realistic style that had a great influence on later German painting.

Theodoric the Great (c.454–526), Ostrogoth king who became ruler of Italy. Encouraged by Zeno, emperor of the Eastern Roman Empire, Theodoric defeated Odoacer, the German king of Italy, and in 493 established a peaceful reign based on Roman law and administration. See also pp.1271, 1271.

Theodorus of Samos (fl.6th century BC), Greek architect. He is reputed to have built a lathe for making columns. The Temple of Hera at Samos (c.560 BC) is his most famous building.

Theodulf (AD 750–821), Spanish poet and theologian. He was active at CHARLEMAGNE'S COURT, writing two treatises, *De spiritu sancto* (Concerning the Holy Spirit) and *De ordine Baptismi* (Concerning the Ordinance of Baptism), for the emperor, for which he received the PALLIUM from Pope Stephen IV in 816. He was imprisoned by Louis I (the Pious) in 818 and died in captivity.

Theology, systematic, scientific investigation of the precepts of a religion, usually Christianity. It is intricately related to philosophical and historical studies and strives to achieve an understanding of various beliefs. It is concerned with concepts of a divine being, man, and ethnics.

Theophanes the Greek (fl.1378–1405), Byzantine painter. He painted frescoes and icons that combined the late Byzantine with the Russian style. His earliest surviving work is a wall painting for the Church of the Transfiguration, Novgorod.

Theophrastus (c.372 BC–c.286 BC), Greek philosopher and founder of botanical science. The leading pupil of ARISTOTLE, he succeeded him as head of the LYCEUM. His surviving works include *Historia Plantarum*, *On Metaphysics and Characters*. See also p.1216.

Theorbo, large double-necked lute, which was commonly used from the 16th–18th centuries. It had up to eight strings over the fingerboard and three or four separate longer bass strings which were played unstopped. Surviving examples of the instrument are 1.2 to 1.8m (4–6ft) long.

Theorell, Axel Hugo Teodor (1903–), Swedish biochemist, Director of the Biochemical Department of the Nobel Medical Institute, Stockholm, from 1937 to 1970. His study of ENZYMES led to a better understanding of the metabolic processes involved in the production of energy, for which he was awarded the 1955 Nobel Prize in physiology and medicine.

Theorem, statement or proposition that is to be proved by logical reasoning from given facts and axioms. In geometry a proposition is considered as a problem (a construction to be effected) or a theorem (a statement to be proved).

Theory of the Earth. See UNIFORMITARIAN PRINCIPLE.

Theosophical Society, organization founded in 1875 to spread information about THEOSOPHY.

Theosophy, religious philosophy that originated in the ancient world but was given a new impetus in 1875 when the Theosophical Society was founded by Helena BLAVATSKY and Henry Olcott in New York. They subsequently moved to India (where the movement took root) and after their deaths their work was continued by Annie BESANT. Modern theosophy continues a mystical tradition in Western thought represented by such thinkers as PYTHAGORAS, PLOTINUS and NICHOLAS OF CUSA but is found, most significantly, in Indian thought where it has been transmitted through sacred books such as the UPANISHADS and BHAGAVAD-GITA. The main tenets of the Society lie in its affirmation of a single eternal principle, its advocacy of the brotherhood of all men and the identity of each soul with the universal "over-soul" and of the eternity of the universe. Belief in the TRANS-MIGRATION OF SOULS also occupies an important place in theosophical doctrine.

Thera, volcanic island in the Aegean Sea to the N of Crete. Although now quiet it is known to have erupted violently in the Bronze Age, spreading thick deposits of

ash over a wide area. See also p.1163.

Therapy, in psychology, treatment of personality disorders which seem to be of a psychological origin. Analytic therapy, exemplified by the methods of JUNG, attempts to aid the patient in discovering deep repressed conflicts. Non-directive therapy utilizes the relationship which can grow between the therapist and patient to modify the patient's behaviour and relieve guilt and insecurity by frank discussion, often in a group. Behaviour therapy does not seek causes but concentrates on modifying the patient's behaviour by procedures involving rewards and punishments. See also pp.1118–1121.

Theresa of Avila. See TERESA, SAINT.

Thérèse of Lisieux, Saint (1873–97), known also as Little Flower, or St Thérèse of the Child Jesus. Thérèse entered the Carmelite Convent at Lisieux at the age of 15. She suffered latterly from religious doubts, which she mastered by prayer. She was canonized in 1925. Feast: 3 Oct.

Therm, unit of heat used until recently, particularly, for expressing the calorific value of town gas; it is now obsolete. It is equal to 100,000 British Thermal Units BTU, also obsolete) or 25,200 kilocalories.

Thermae, Roman public baths. They became an important part of Roman civic architecture in the 1st century AD, and remains of these baths can be found in many Roman towns. They were often massive buildings and some included important works of sculpture and design. Typical thermae were the Baths of Caracalla and those at BATH, England. See also pp.1228, 1238, 1242.

Thermal, or **thermal current**, small-scale rising current of air produced by local heating of the Earth's surface. Thermals are often used by gliding birds and manned GLIDERS.

Thermal capacity, in physics, capacity of an object to absorb heat. It is the product of the object's mass and its specific heat.

Thermal power, literally, heat power. Any heat engine, for example a steam locomotive, employs thermal power. The heat generated by burning a fuel is converted into useful energy; in this case the energy drives the locomotive's pistons.

Thermic lance, long metal tube tipped with a nozzle, through which oxygen is fed at pressure. Its most important application is in the basic oxygen method of steelmaking, in which the lance, surrounded by a water jacket for cooling, jets oxygen on to a bath of molten steel in a furnace.

Thermidorian reaction, in the FRENCH REVOLUTION, period following the conservative coup of 9 Thermidor Year II of the Revolution (27 July 1794). The coup led to the fall of ROBESPIERRE and the suppression of the JACOBINS. See also pp.1550–1551.

Thermionic emission, emission of ELECTRONS from the surface of a substance as a result of heating it.

Thermionics, study of the emission of electrons or ions from a heated conductor. This is the principle of operation of the radio valve or electron tube, where the heated conductor is the CATHODE and the emitted electrons are the current carried by the valve. Such valves have now been superseded by TRANSISTORS. A more modern aim for thermionics is the design and construction of thermionic power generators, which will convert heat directly into electricity on a much larger scale than an electron tube.

Thermistor, type of semiconductor whose resistance sharply decreases with increasing temperature. At 20°C the resistance may be of the order of a thousand ohms and at 100°C it may be only 10 ohms. Thermistors are used to measure temperature and to compensate for temperature changes in other parts of a circuit.

Thermite process, smelting process in which a metallic oxide ore is reduced to the metal by heating with finely divided aluminium powder. It is the basis of the Goldschmidt process for extracting such high melting-point metals as chromium, manganese, molybdenum and vanadium. It can also be used for welding cracks in metal, such as large castings and rails.

Thermochemistry, branch of physical che-

mistry which deals with the heat effects that accompany chemical changes. Examples include the heat given off or absorbed during a chemical reaction, the dissolving of a substance, or changes of state, such as from a liquid to a gas.

Thermocline, middle layers of ocean water between surface and deep waters, which are defined by differing densities and temperatures. It is up to 1,000m (3,300ft) thick with a temperature only a few degrees above freezing. The thermocline is important as a stable boundary that tends to prevent interchange between layers. See also p.233.

Thermocouple, thermometer consisting of two wires of different alloys joined at one end and with their other two ends maintained at constant temperature. When the joined ends are inserted in the substance to be studied, heat flows at different rates along the two wires because of their different compositions. This difference can then be measured. See also pp.842-843.

Thermodynamics, the study of the heat content and interactions of systems. Historically, the laws of thermodynamics were developed from observation of large-scale properties of systems, with no understanding of the underlying atomic structure. It is now possible to calculate those laws from statistical and quantum mechanical principles. Thus the historical subject of thermodynamics is now subsumed in the disciplines of STATISTICAL MECHANICS or QUANTUM MECHANICS. There are three laws of thermodynamics. The first law, basically a restatement of the conservation of energy, states that for any substance a quantity called the internal energy can be defined such that the change in the internal energy is the sum of the work done on the system and the heat absorbed by it. The second law states that for any substance a quantity called ENTROPY can be defined such that (a) if the system is left alone, its entropy tends to increase, and (b) if the system absorbs heat, its entropy changes by the ratio of the heat absorbed to the temperature. The third law states that as the temperature approaches absolute zero, the entropy approaches zero. See also p.844.

Thermoelectricity, various means of converting heat energy into electricity or vice versa. There are three such effects. In the SEEBECK EFFECT the junctions of two metal wires forming a circuit are kept at different temperatures, and an electric current flows; this is the basis of THERMOCOUPLES. The PELTSER EFFECT acts in the reverse manner, and electrical energy is converted to heat energy. Lord KELVIN discovered the third thermoelectric effect (the THOMSON EFFECT): if a temperature gradient is maintained along a wire - a difference in temperature between both ends - it gives rise to a potential difference along the wire. If the current flows from the cooler to the hotter part of the wire, the effect is called the positive Thomson effect; the reverse is the negative Thomson effect.

Thermoelectric propulsion, any of several rocket propulsion systems combining heat and electrical means to accelerate particles to high velocities. An arc jet engine uses an electric arc to heat liquid hydrogen to 50,000°C; the resulting PLASMA of ionized hydrogen is accelerated through a conventional nozzle or, in the plasma engine, through a magnetic field for greater force. Ion rockets accelerate heavy charged particles such as caesium ions. All thermoelectric rockets produce low but long-lasting thrust - a requirement of interplanetary space travel.

Thermogram, photographic or other record of the heat radiated from an object, usually obtained with an infra-red camera. For example, a thermogram can show the different temperature zones of the surface of the human body, which may be useful in the diagnosis of various disorders. Or it may show isothermal contours of the Earth's surface, as recorded by an orbiting spacecraft. See also p.782.

Thermometer, instrument for measuring temperature. Any substance with physical properties (eg volume) that change with varying temperature may be used as a

measure, provided that the change is correctly monitored and scaled. The mercury thermometer, for example, depends on the expansion of the metal mercury which is held in a glass bulb connected to a narrow, graduated tube. Common scales are FAHRENHEIT, CELSIUS (Centigrade) and KELVIN. See also p.842.

Thermonuclear reaction. See NUCLEAR ENERGY.

Thermoplastic, type of POLYMER that softens on being heated and can be repeatedly melted or softened by heat without change of properties. Typical examples are POLYETHYLENE, POLYSTYRENE and PVC. See also p.588.

Thermoplastic resin, synthetic plastic that softens when heated and returns to its original solid state when cooled. Examples include NYLON, PVC, POLYETHYLENE, fluorocarbons and POLYSTYRENE. See also p.589.

Thermopylae, coastal mountain pass in E central Greece, between Mount Oeta and the S Malian Gulf, SE of Lamia. Its strategic location as an entry point to Greece made it the scene of many ancient battles. See also pp.1193, 1204, 1204.

Thermoreceptors, in anatomy, sensory nerve endings, sited in the skin and in the deep body tissues, which detect changes in temperature and signal them to the brain. There are two types: receptors that are stimulated by cold and receptors responsive to heat.

Thermosetting resin, type of POLYMER that loses its plasticity under heat and pressure. Examples include polyesters, epoxy resins, phenolic resins and silicones. See also p.588.

Thermosphere, shell of light gases between the MESOSPHERE and the EXOSPHERE, between 100km (60 miles) and 450km (280 miles) above the Earth's surface. The temperature steadily rises with height in the thermosphere.

Thermostat, device for maintaining a constant temperature. A common type contains a strip of two metals, one of which expands and contracts more than the other. Thus the strip bends and breaks an electrical contact at a particular temperature. As it cools, the strip unbends, makes contact and the heating begins again. See also p.875.

Theropod, any of a group of bipedal carnivorous dinosaurs. They were either large, like TYRANNOSAURUS, or small and lightly built, like ORNITHOMIMUS. Order Saurischia; sub-order Theropoda. See also pp.280, 282, 283.

Theroux, Paul (1941-), US novelist, long resident in Britain. His novels, such as *Fong and the Indians* (1968) and *The Family Arsenal* (1975), have been overshadowed by his travel book, *The Great Railway Bazaar* (1975), which has won high praise.

Theseus, in Greek mythology, a great hero of many adventures, the son of Aethra, a princess of Troezen, by Aegeus, King of Athens, and the sea god POSEIDON. Theseus killed many villains (among them PROCRUSTES), but his most famous exploit was the vanquishing of the MINOTAUR of Crete.

Thesiger, Wilfred Patrick (1910-), British writer about travel, adventure and exploration. He explored the Danakil Desert (1933-34). In the Sudan he served in Political Service (1935-40) and during WWII served with the Special Air Service, where he attained the rank of major. His works include *Arabian Sands* (1959) and *The Marsh Arabs* (1964).

Thespis (6th century BC), Greek writer who according to tradition was the inventor of tragedy. He is also said to have introduced a character separate from the chorus, which had previously dominated the stage, who provided dialogue by responding to their comments. See also p.1208.

Thessalonians, Epistles to the, two of St PAUL's earliest letters, written to the Church at Thessalonica which, together with neighbouring Christian communities, received encouragement and pastoral guidance from him. He taught them about the RESURRECTION of the dead at the SECOND COMING of Christ.

Thessaloniki (Salonica), port in N Greece, in Macedonia on the Gulf of Thessaloniki; second-largest city in Greece and capital of Thessaloniki prefecture. Founded c.315 BC, it flourished under the Romans after 148 BC as the capital of Macedon province. The city was second only to Constantinople in importance in the BYZANTINE EMPIRE. The city was conquered by Greece in 1913 during the BALKAN WARS. Exports include agricultural products, manganese and hides. An important commercial centre, it has textiles, soap, wine, cement and food processing industries. Pop. (1971) 345,799.

Thessaly (Thessalia), administrative district of N central Greece and region of ancient Greece. The centre of an extensive Neolithic settlement until c.2500 BC, it was cut off from much of the culture and politics of classical Greece. Thessaly was taken by the Macedonians in 352 BC, and became part of the province of Macedonia under Roman rule in 148 BC. It became part of the BYZANTINE EMPIRE with the decline of Roman rule, passed to the Turks in 1393. It was annexed to Greece in 1881.

Thiamine, VITAMIN of the B complex required for carbohydrate metabolism. Its deficiency causes the disease BERIBERI.

Thierry, Jacques-Nicolas-Augustin (1795-1856), French historian. His reputation rests on two works, *La Conquête de l'Angleterre* (The Norman Conquest of England, 1825) and *Lettres sur l'Histoire de France* (Letters on French History, 1827).

Thiers, Louis Adolphe (1797-1877), French politician and historian. He was twice Foreign Minister under LOUIS PHILIPPE and led the Liberal opposition to NAPOLEON III from 1863 to 1870. He was first President of the Third Republic (1871-73). He wrote a 10-volume *History of the French Revolution* (1823-27) and a 20-volume *History of the Consulate and Empire* (1840-55).

Thieu, Nguyen van (1923-), President of the Republic of Vietnam from 1967 to 1975. He participated in the overthrow of President DIEM in 1963 and ruled with KY until his election as president. Criticized for his refusal to accept a political settlement in the VIETNAM WAR, he resigned before the fall of Saigon and fled to Taiwan.

Thieving Maggie, The (1817), two-act opera by Gioacchino ROSSINI with libretto by Giovanni Gherardini. It was first produced at La Scala, Milan.

Thimmonier, Barthélemy (1793-1857), French tailor who patented the first sewing machine that was put to practical use. His patent was taken out in 1830 and it was a wooden machine which used a single thread.

Third man argument, philosophical argument proposed by ARISTOTLE as a criticism of PLATO's theory of FORMS or IDEAS. Where Plato had posited the duality of Form and Matter, Aristotle claimed that the qualities that the two have in common can only be expressed in terms of a third concept. See also p.1880.

Third Reich, period in German history from 1933 to 1945, during which Germany was under the totalitarian dictatorship of Adolph HITLER. The term was used to indicate a closeness with other great periods of German history - the First Reich of the Holy Roman Empire and the Second Reich (1871-1918), founded by OTTO VON BISMARCK.

Third Republic, form of government in France from 1870 to 1940. It was established after the collapse of the SECOND EMPIRE in the FRANCO-PRUSSIAN WAR and its constitution was drawn up as a compromise between conservative republicans and monarchists during the period 1873-75. It was marked by liberalism and a surge of imperial growth until 1914; after 1918 it was beset by economic problems and finally collapsed during WWII with the German invasion in 1940. See also pp.1651, 1660.

Third World, term of French origin which became fashionable in the 1960s to describe the countries of South America,

Thermoelectricity: this thermoelectric nuclear station is at Berkeley, England.

Thermometer: a maximum and minimum version records extremes of temperature.

Thermopylae: Leonidas lead a valiant defence against the Persians in 480 BC.

Thessaloniki's white tower is a well-known landmark of the city's seafront.

Thirteen Colonies

Africa and Asia which are not part of either the Western or the Communist blocs. Many such countries share an under-developed, pre-industrial economy – and a resentment against their former colonial rulers, is felt more for the business interests of the USA than for Most of them are “non-aligned” with any of the recognized world powers. *See also* pp.1731, 1738–1739, 1788–1789.

Thirteen Colonies, name given to the 13 territories that, together with Canada, made up British North America prior to the WAR OF AMERICAN INDEPENDENCE. After the war, the colonies declared themselves an independent nation and became the first states in the USA. They are CONNECTICUT, DELAWARE, GEORGIA, MARYLAND, MASSACHUSETTS, NEW HAMPSHIRE, NEW JERSEY, NEW YORK, NORTH CAROLINA, PENNSYLVANIA, RHODE ISLAND, SOUTH CAROLINA and VIRGINIA. *See also* pp.1540–1541, 1541.

Thirty-nine Articles. *See* ARTICLES OF THE CHURCH OF ENGLAND.

Thirty Years War (1618–1648), European war involving German PROTESTANT princes together with France, Sweden, England and Denmark against the HAPSBURG and CATHOLIC princes of the HOLY ROMAN EMPIRE. In 1618 Bohemian Protestant princes revolted against the Catholic King Ferdinand (later Emperor FERDINAND II); they were defeated, but the N European Protestant kings of Denmark and Sweden intervened, and the general warfare gave countries such as France the chance to extend their influence. The war left Germany with its lands devastated, its economy in ruins and its population greatly reduced. The Holy Roman Empire fared hardly better, the Hapsburgs losing some of their power. After the war European conflicts arising from religious causes decreased, and the Peace of Westphalia (1648), formally ending the war, led to greater religious tolerance. *See also* pp.1406–1407.

Thistle, any of numerous species of plants with thorny leaves and yellow, white, pink or purple flower heads with prickly bracts. The field thistle, *Cirsium discolor*, resembles the heraldic thistle which is the national emblem of Scotland.

Thistle, Most Ancient and Most Noble Order of the, Scottish order of knighthood revived by James II in 1687, consisting of the sovereign and 12 knights (although only eight were nominated). In abeyance from 1689 to 1703, the order was revived again by Queen Anne. The number of companions was raised to 16 from 1827. The order has a chapel in St Giles Cathedral, Edinburgh.

Thistlewood, Arthur (1770–1820), British revolutionary. Fired with radical ideas after visiting Paris and the US, he led the 1820 CATO STREET CONSPIRACY and was hanged for treason.

Tholos, type of monumental stone-built tomb of Mycenaean Greece (1600–1100 BC), sometimes known as “bee-hive tombs” in reference to their circular, dome shape. The finest example, covered with an earth mound and approached by a walled passage, is the “treasury of Atreus” at Mycenae. *See also* p.1173.

Thoma, Hans (1839–1924), German painter. After 1868, his style was influenced by COURBET and the BARBIZON painters. His work includes landscapes, especially of the Black Forest, genre paintings and portraits.

Thomas, Saint, one of the twelve APOSTLES of Jesus Christ. In the Gospel of St John he is called Twin (Greek *Didymus*). He has been called “Doubting Thomas” because, after the RESURRECTION of Christ, he disbelieved the appearance to the other disciples of the risen Lord (John 20: 24–28). The Gospel of St Thomas (which is not a part of the CANON of scripture) and three other apocryphal works bearing his name were written well after his time.

Thomas, Dylan Marlais (1914–53), Welsh poet whose powerful verse, although sometimes obscure, is immensely popular. It is at its best in *Deaths and Entrances* (1946). His prose works are collected in such volumes as *Adventures in the Skin Trade* (1955). He wrote the radio play

Under Milk Wood (1954) and his collected poems were published in 1952. *See also* pp.1770, 1770.

Thomas, John. *See* CHRISTADELPHIANS.
Thomas, Philip Edward (1878–1917), British poet who began his career writing essays, travel books and criticisms. Encouraged by Robert FROST, he started writing poetry, mostly about nature, in 1914. His first volume *Poems* was published shortly before he was killed in WWI.

Thomas, Sidney Gilchrist (1850–85), British metallurgist. In 1875 he invented a method, known as the basic OPEN HEARTH PROCESS, for removing phosphorus impurities from iron ore during conversion in the BESSEMER PROCESS.

Thomas à Kempis. *See* KEMPIS, THOMAS A.
Thomas Aquinas, Saint. *See* AQUINAS, SAINT THOMAS.

Thomasites, religious group which later adopted the name CHRISTADELPHIANS, founded in the US in c. 1848 by John Thomas. Christadelphians believe in using the Bible as the exclusive source of moral guidance.

Thomism, philosophy of St Thomas AQUINAS one of the major systems in SCHOLASTICISM. Aquinas blended the philosophy of ARISTOTLE with Christian theology. Using Aristotle's concept of matter and form, he conceived a hierarchy in which spirit is higher than matter, soul higher than body, and theology above philosophy.

Thompson, Benjamin, Count Rumford. *See* RUMFORD, BENJAMIN THOMPSON, COUNT.

Thompson, David (1770–1857), British-born Canadian fur trader and explorer. He joined the HUDSON'S BAY COMPANY in 1784, studied surveying and journeyed to Lake Athabasca and the MISSISSIPPI headwaters. In 1807 he established the first trading post on the Columbia River and later charted the US-Canada boundary.

Thompson, Sir Edward Maunde (1840–1929), British palaeographer who was principal librarian and director of the BRITISH MUSEUM (1888–1909). His published works include *An Introduction to Greek and Latin Palaeography* (1912).

Thompson, Francis (1859–1907), British poet. First trained for the Roman Catholic priesthood, he later studied medicine unsuccessfully and became destitute in London until he was found by Alice Meynell. *Poems* (1893) includes his best-known work *The Hound of Heaven*.
Thompson, Sir John Sparrow David (1844–94), Canadian politician. A practising lawyer, he entered politics in 1877. In 1885 he was appointed Minister of Justice; he became Prime Minister in 1892 and died in office.

Thomsen, Christian Jürgensen (1788–1865), Danish museum curator and prehistorian. As head of the National Museum of Denmark (1816–65), he was the first to propose the division of prehistoric remains into the categories STONE AGE, BRONZE AGE and IRON AGE.

Thomson, Sir Charles Wyville (1830–82), Scottish naturalist. He was appointed the director of the CHALLENGER voyage (1872–76). Thomson published *The Depths of the Sea* (1873), and an account of his expedition, *The Voyage of the Challenger* (1877).

Thomson, Elihu (1853–1937), US electrical engineer and inventor, b. Britain. With Edwin J. Houston he developed an arc lighting system that led to the founding of the American Electric Company, which later became the Thomson-Houston Electric Company. This merged in 1892 to form the General Electric Company (GEC). Thomson invented the first high-frequency dynamos and transformers.

Thomson, Sir George Paget (1892–1975), British physicist (son of Sir J. J. THOMSON) who shared the 1937 Nobel Prize in physics with Clinton DAVISSON. In 1927 both men, working independently, succeeded in diffracting ELECTRONS, thus confirming their wave nature first predicted in 1923 by Louis DE BROGLIE. Thomson fired fast electrons through thin gold leaf to obtain a diffraction pattern.

Thomson, James (1700–48), Scottish

poet. His most famous poem *The Seasons* was published in four parts: *Winter* (1726), *Summer* (1727), *Spring* (1728) and *Autumn* (1730). His sensitivity to nature throughout his work makes him a forerunner of ROMANTICISM.

Thomson, Jeffrey (1944–), Australian cricketer. A fast bowler with a powerful action but sometimes erratic delivery, Thomson made his Test debut in 1974 in the series against England, and in 1977 took his 100th Test wicket in only 22 Test matches.

Thomson, Joseph (1858–95), Scottish explorer. He made his first African journey in 1878 to explore Lake TANGANYIKA. On subsequent expeditions, he advanced British commercial interests in South Africa. His books include *To the Central African Lakes and Back* (1881).

Thomson, Sir Joseph John (1856–1940), British physicist. His work on the conductivity of gases led him to the discovery of the ELECTRON in 1897 and he made the Cavendish laboratory at Cambridge University a world-famous centre of atomic research. He was awarded the 1906 Nobel Prize in physics for his investigations into the electrical conductivity of gases. *See also* pp.812, 813.

Thomson, Peter (1929–), Australian golfer. He won the British Open Championship in 1954, 1955, 1956, 1958 and 1965, and the Australian Open in 1951, 1967 and 1972.

Thomson, Virgil (1896–), US critic and composer who was music critic for the New York *Herald Tribune* (1940–54). Much influenced by Erik SATIE, his works include the operas *Four Saints in Three Acts* (1928, first production 1934) and *The Mother of Us All* (1947) with libretti by Gertrude STEIN.

Thomson, William, Lord Kelvin. *See* KELVIN, WILLIAM THOMSON, 1ST BARON.

Thomson effect, potential difference which develops between two points on a metal conductor if the two points are maintained at different temperatures.

Thomsonite, mineral, hydrated aluminium sodium silicate of the zeolite group found in cavities of basaltic rocks. Its crystals are of the orthorhombic system and it is snow-white when pure. Hardness 5–5.5; s.g. 2.2.

Thomson of Fleet, Roy Herbert, Lord (1894–1976), Canadian newspaper proprietor. He established a radio station in 1931 and subsequently took over a weekly newspaper. Soon he had a chain of newspapers and radio stations, becoming a millionaire. In Britain he acquired control of the *Scotsman* and *Kemsley* newspapers, and from 1966 controlled *The Times* (which was sold after his death).

Thor, in North European mythology, god of thunder and lightning, corresponding to JUPITER. The eldest and strongest of ODIN's sons, he was represented as a handsome red-bearded warrior, benevolent towards men but a mighty foe of evil. A magic belt doubled his strength.

Thorax, in animal anatomy, the part between the NECK and the ABDOMEN. In mammals it is formed by the RIB cage and contains the LUNGS, the HEART and the OESOPHAGUS. It is separated from the abdomen by the DIAPHRAGM. In insects it consists of several segments to which legs and other appendages are attached.

Thornburn, Archibald (1860–1935), British naturalist, painter, writer and illustrator, who specialized in detailed paintings of British wildlife, particularly of game birds and birds of prey. A *Naturalist's Sketchbook* was published in 1919.

Thoreau, Henry David (1817–62), US writer and naturalist, a follower and friend of Ralph Waldo EMERSON. An ardent individualist, he experimented in living a near-solitary life, rejecting materialism and finding fulfilment in observing plant and animal life. He built himself a cabin at Walden Pond, near Concord in Massachusetts and wrote *Walden*, an account of his life there, in 1854. His essay “Civil Disobedience” (1849) has influenced many passive resistance movements. He was active in the anti-slavery movement in the 1850s. *See also* p.1772.

Thorium, radioactive metallic element

(symbol Th) of the ACTINIDE ELEMENTS, first discovered in 1828. The chief ore is monazite (phosphate). The metal is used in photoelectric and thermionic emitters. Chemically reactive, it burns in air but reacts slowly in water. Properties: at.no. 90; at.wt. 232.038; s.g. 11.72; m.p. 1,750°C (3,182°F); b.p. 4,790°C (8,654°F); most stable isotope Th²³² (1.41 × 10¹⁰ yrs).

Thorn apple, plant of the genus *Datura*, especially Jimson weed (*D. stramonium*), a poisonous, annual weed of tropical American origin, now naturalized throughout the world. It has foul-smelling leaves and large white or violet trumpet-shaped flowers that are succeeded by round prickly fruits Family Solanaceae.

Thornike, Dame Sybil (1882–1976), British actress. She played more than 100 Shakespearean roles and her performances in Euripides's *Medea* and *The Trojan Women* brought her critical acclaim. She also starred in the first production of SHAW's *St Joan* (1924), and in Clemence Darie's *Eighty in the Shade* (1959). She often appeared on stage. In 1969 she performed at the opening of the theatre in Leatherhead named after her.

Thornett, John (1930–), Australian Rugby Union forward who led the WALLABIES during one of their finest eras. As a lock and later in the front row, he won 37 caps (1955–67).

Thornhill, Sir James (1675–1734), British artist and the first British fresco painter in the BAROQUE manner. He decorated the Painted Hall at Greenwich Hospital (1708–27) and the dome of St Paul's Cathedral (1715–17). He also painted portraits and several altar-pieces.

Thoroddson, Jón (1818–68), Icelandic novelist. He wrote some lyrics and drinking songs, but is chiefly remembered for his novels which include *Lad and Lass* (1850), and the unfinished *Man and Woman* (1876). These works are generally thought to be among the finest fictional Icelandic stories.

Thorpe, James Francis (1888–1953), US athlete. Part Sac-fox Indian, he won both the pentathlon and decathlon in the 1912 Olympic Games. A year later, however, he was forced to give up his medals when it was discovered he had played semi-professional baseball. He played baseball in the National League with three different teams (1913–19).

Thothmes. *See* THUTMOSE.

Thousand Islands, group of more than 1,500 islands in the St Lawrence River, extending about 128km (80 miles) along the US-Canada border. Most of the islands belong to Canada, many being forested and popular tourist resorts; others are privately owned. The largest island is Wolfe, with an area of 127sq km (49sq miles).

Thrace, region of SE Europe, now partly in Greece, Turkey and Bulgaria. The Thracians had a flourishing and rich culture. The region came under Macedonian control in 342 BC, and was created a Roman province in AD 46. From the 7th century it was divided between the Byzantine empire and the Bulgar kingdom, eventually falling to the Ottoman Turks in 1453. During the 19th century, Russia tried to extend its influence over Thrace, but the region was divided up amongst its neighbours in the treaties following WWI.

Threadworm, small ROUNDWORM of the phylum Aschelminthes. It is commonest in moist tropical regions and resembles a short length of hair or thread. It may inhabit the intestines of human beings, but can live and breed freely in soil. Species *Oxyurus vermicularis*. *See also* pp.2, 19.

Three-Cornered Hat, The (1919), comedy ballet in one act, choreographed by Leonid MASSINE to music by Manuel de FALLA. The libretto is based on a story (1874) by ALARCÓN. It was first performed in London, with settings by PICASSO, by Diaghilev's BALLETS RUSSES. The plot concerns a governor's amorous intentions towards a miller's wife.

Three-cushion billiards. *See* BILLIARDS.

Three-day event. *See* HORSE TRIALS.

Three-dimensional films, special-effect films produced in Hollywood which, when viewed through tinted paper glasses, gave

the illusion of depth. One of the more famous productions was *House of Wax* (1953). Their popularity waned when the wide screen systems arrived.

Three Estates, classes of citizens in early modern Europe granted a share in the discussion of matters of state. In France the *ESTATES-GENERAL*, first called in 1302, were the clergy, the nobility and the common people. In England they were the lords spiritual, the lords temporal and the commons (knights of the shires and burgesses).

Three Musketeers, *The* (1844), historical novel by Alexandre DUMAS (père), containing the characters Athos, Porthos, Aramis and d'Artagnan.

Three Sisters, *The* (1900), four-act drama by Anton CHEKHOV. The play concerns three sisters who spend a tedious existence in the country and never satisfy their longing to go to Moscow.

Threonine, water-soluble, crystalline essential AMINO ACID found in PROTEINS. It was isolated in 1932.

Threshold, in physiology, theoretical point at which a stimulus can be detected (absolute threshold) or at which it is possible to discriminate between stimuli (difference threshold). Such thresholds are sometimes called limens.

Thrift, any of several species of small, evergreen perennial plants that grow throughout the world in sandy soil. It has blue-green leaves and clusters of white, red or pink flowers. Height: to 30cm (12in). Family Plumbaginaceae; genus *Armeria*. See also p.332.

Thrip, any of numerous species of slender, sucking insects found throughout the world. Species vary in colour, but most feed on plants and some carry plant diseases. Often found in large numbers, they have simple fringed wings. Length: to 8mm (0.3in). Order Thysanoptera. See also pp.36-37, 36-37, 41.

Throat. See PHARYNX.

Thrombin, blood ENZYME that converts FIBRINOGEN to fibrin during the formation of blood clots. See also p.157.

Thrombocyte. See PLATELET.

Thrombophlebitis, condition involving blood clot formation and inflammation of the veins. It may be treated with anticoagulants and hot compresses.

Thromboplastin, substance, present in tissue, which is believed to activate the conversion of prothrombin and calcium to THROMBIN. See also BLOOD CLOTTING; p.157.

Thrombosis, formation or presence of a blood clot in the circulatory system. It may be due to an injury to the lining of the heart or blood vessels, alterations in normal blood flow and changes in the ability of the blood to coagulate. See also pp.1066, 1066.

Thrombus, clot of blood formed within a blood vessel. Unlike an Embolus, it remains attached to its place of origin, and is therefore potentially less dangerous.

Through the Looking Glass (1872), story by Lewis CARROLL, sequel to *Alice's Adventures in Wonderland*. It concerns the same child heroine who dreams that she passes through a mirror into an entirely back-to-front world.

Thrush, any of numerous species of small songbirds of the family Turdidae, which is represented throughout the world. The European song thrush (*Turdus philomelos*) is mottled brown with a lighter, speckled breast. It feeds mainly on insects and fruit and builds a cup-shaped nest in a tree. Length: to 30cm (12in). See also p.78.

Thrush, or moniliasis, fungal infection of the mucous membranes of the mouth, bronchi, lungs or vagina. Caused by the fungus *Candida albicans* it responds well to treatment, but is rarely serious in healthy people. See also pp.1074, 1074.

Thrust, force needed to drive an Aircraft or ROCKET. For aircraft it is provided by a propeller or jet engine. A propeller imparts thrust from its aerodynamic lift; a jet or rocket derives its thrust from the expulsion, at high velocities, of exhaust gases.

Thucydides (c.460-c.400 BC), ancient Greek historian. After commanding an

unsuccessful expedition in 424 BC to Amphipolis in the PELOPONNESIAN WAR, he went into exile (423-403) and wrote his *History of the Peloponnesian War*. It marked the beginning of a new style of history in that it viewed events in terms of the general nature and behaviour of man rather than as the result of fate. See also p.1209.

Thugs, originally members of a secret society in India who would kill in honour of KALI, the Hindu goddess of destruction; they strangled their victims. Beginning in the 1830s the British stamped out the Thugs through arrests and executions, and by 1848 the menace had ended. The term is now used to denote any brutal robbers or gangsters.

Thulium, metallic element (symbol Tm) of the LANTHANIDE SERIES first discovered in 1879. Its chief ore is monazite (a phosphate). The element has few commercial uses. Properties: at.no. 69; at.wt. 168.9342; s.g. 9.31 (25°C); m.p. 1,545°C (2,813°F); b.p. 1,727°C (3,141°F); most stable isotope Tm¹⁶⁹ (100%).

Thumbscrew, instrument of torture used to compress and crush the victim's thumbs. It is reputed to have been introduced in the 17th century by James, the Fourth Earl and First Duke of Perth.

Thunder Bay, city in SW Ontario, Canada, on Thunder Bay, an inlet of Lake Superior. It is a major Canadian port and an important shipping point for a rich mining region. The city is the seat of Lakehead University (1965). Industries: shipbuilding, grain milling, paper. Pop. (1974) 108,415.

Thunderstorm, electrical storm which is commonly experienced as lightning and thunder. Thunderstorms are caused by the separation of electrical charges in clouds. Water drops are carried by updraughts to the top of a cloud, where they become ionized and accumulate into positive charges - the base of the cloud being negatively charged. An electrical discharge (a spark) between clouds, or a cloud and the ground, is accompanied by light (seen as a lightning stroke) and heat, which expands the air explosively and causes it to reverberate and produce sounds and echoes called thunder. Thunderstorms are usually accompanied by heavy rain; ozone and the oxides of nitrogen are produced in the air. See also p.249.

Thurber, James Grover (1894-1961), US artist and writer. He began his career as a newspaper reporter and in 1927 became a regular contributor of essays, short stories and cartoons to the *New Yorker* magazine. A humorist, his work is ironic and satiric. Collections of his essays and stories include *My Life and Hard Times* (1933), *Fables for our Time* (1940), *My World and Welcome to It* (1942).

Thuringia, historic region of Germany, now in SW East Germany. It became a frontier state in CHARLEMAGNE's empire, and its rulers became powerful princes with the HOLY ROMAN EMPIRE in the 11th century. In the 15th century most of the region passed to the Wettin family. In the 16th century it was one of the first states to declare itself Protestant. Thuringia was reconstituted as a state (*Land*) in 1920 under the Weimar republic, but it lost its separate identity in 1952. See also p.1588.

Thurrock, county district in central Essex, England, created in 1974 under the Local Government Act (1972). Area 163sq km (63sq miles). Pop. (1979 est.) 127,100.

Thursday, fifth day of the week. The name derives from THOR, the Germanic God.

Thus Spake Zarathustra. See ALSO SPRACH ZARATHUSTRA.

Thutmose, royal name of four kings of the XVIIIth dynasty of Egypt (c.1525-1398 BC). The most significant achievement of Thutmose I (r.c.1515 BC) was the subjugation of the Nile Valley up to the 3rd cataract. Thutmose II married his half-sister HATSHEPSUT, who in effect ruled Egypt (c.1503-c.1482 BC). Thutmose III (r.c.1504-1450 BC) ruled at first with Hatshepsut, and extended his empire from the 3rd cataract to the Euphrates. Thutmose

IV was pharaoh 1425-1416 BC. See also p.1180.

Thylacine. See TASMANIAN WOLF.

Thyme, aromatic garden herb of the MINT family used as an ornamental plant and in cooking. It yields an oil from which the drug thymol is prepared. It has purplish flowers and curled leaves. Height: 15-20cm (6-8in). Genus *Thymus*. See also pp.372, 708, 709.

Thymine, in molecular biology, one of the four nitrogen bases in the nucleic acid DNA (the others are ADENINE, GUANINE and CYTOSINE). In RNA thymine is replaced by uracil in the base sequence.

Thymus gland, one of the ENDOCRINE, or ductless, glands, located in the upper chest in mammals; it is large in infancy and shrinks after puberty. It is thought to be a lymphoid organ, secreting a HORMONE that acts on LYMPH tissue and producing ANTIBODIES that function in the body's IMMUNE SYSTEM. Disorder of the thymus is often associated with auto-immune diseases (diseases in which the body produces antibodies that attack its own tissues). See also pp.154-155.

Thyroid gland, H-shaped ENDOCRINE (ductless) gland lying in the neck region, along the sides of and over the trachea (windpipe), below the Adam's apple. It secretes the hormone THYROXINE, which is essential for the growth and development of the body and brain and for the regulation of metabolism. A lack of thyroxine can produce CRETINISM in children, and MYXOEDEMA in adolescents and adults. Overactivity of the gland, known as Graves disease or thyrotoxicosis, produces weight loss, bulging eyeballs and irritability. See also GOTTRE; pp.154-155.

Thyroid stimulating hormone (TSH), hormone secreted by the frontal (anterior) lobe of the PITUITARY GLAND. It stimulates the THYROID GLAND in the neck to produce the hormone thyroxine, which helps control metabolism. When the level of thyroxine in the blood is sufficiently high, it shuts down the production of TSH by the pituitary. See also pp.154-155.

Thyroxine, hormone secreted by the THYROID GLAND. It contains iodine, and helps regulate the rate of metabolism; it is essential for normal growth and development. See also pp.154-155.

Thysanoptera, order of 5,000 species of small narrow-bodied insects, which have piercing mouthparts for feeding on plant juices. They are commonly called THIRPS, and may have wings or be wingless. Length: to 15mm (0.6in). See also pp.36-37.

Thysanura, order of 350 species of primitive wingless insects, commonly called bristletails and including the SILVERFISH. They have elongated scaly bodies, long antennae and bristle-like appendages on the lower abdomen. Subclass Apterygota. See also pp.36-37.

Tiahuanaco, archaeological site on the S shore of Lake TITICACA in the Bolivian highlands. Tiahuanaco, which flourished AD 600-1000, was a ceremonial centre and possibly the capital of pre-Inca empire. See also pp.1367, 1367.

Tianjin, or Tientsin, administratively independent city in the east central part of Hopeh province, China. It is China's third largest city, an international port, and a major centre for heavy industry. Pop. (1976-80 est.) 7,000,000.

Tibaldi, Pellegrino (1527-96), Italian painter and architect. A follower of MICHELANGELO, he worked mainly in Bologna (his home town), Milan (from 1560) and Spain from 1588. He helped to design Milan Cathedral (1567-76) and was instrumental in the introduction of MANNERISM to Spain.

Tiber, second-longest river in Italy. It rises in the Etruscan Apennines, flows S then SW through Rome and reaches the Tyrrhenian Sea at Ostia, SW of Rome. It is linked to the River Arno by the Paglia River and the Chiana Canal. The upper Tiber is used to generate electricity. Length: 404km (251 miles).

Tiberias, lake port in NE Israel, 48km (30 miles) E of Haifa on the W shore of the Sea of Galilee. The city was founded by the Romans in AD 19 and named after the

reigning emperor TIBERIUS. The city was taken by the Crusaders in 1099, and by the Ottoman Empire in the 116th century. It is the site of many ancient synagogues, and the tomb of MAIMONIDES. An agricultural trade centre, Tiberias is one of Israel's major tourist resorts. Pop. (1970 est.) 23,900.

Tiberius (42 BC-AD 37), Roman emperor (AD 14-37). He governed Transalpine Gaul and fought in Germany and Illyria. He was adopted by AUGUSTUS, whose heirs had died, and became emperor at Augustus' death. He pursued a peaceful foreign policy and accumulated great wealth. He retired from Rome in AD 26, fearing plots upon his life. See also p.1232.

Tibesti, mountain range in NW Chad, in the central Sahara. The highest peak is Emi Koussi, 3,415m (11,204ft).

Tibet (Xizang Zizhiqu), high plateau in central Asia bordered by Chinese provinces (N and E), and India (S and W). In 1965 it was declared the Tibet Autonomous Region. Tibet contains the world's highest mountains, the Himalayas, and the average altitude of the country is more than 4,575m (15,000ft). Asia's largest rivers, including the Yantze, Mekong, Indus and Brahmaputra, all rise in Tibet, although there is a marked variation in rainfall distribution on either side of the Himalayas. The Tsangpo valley is the only agricultural area; many of the people still engage in nomadic pastoralism and large deposits of gold and copper remain unexploited. The capital is Lhasa. Tibet flourished as a kingdom in the 7th century AD, coming under Mongol rule 13th-18th century. LAMAISM developed in the 11th century under the influence of Indian Buddhist immigrants and the first DALAI LAMA was crowned in 1641. As Mongol power waned China claimed sovereignty of the region; Britain as the dominant power in neighbouring India recognized this in 1907. The Tibetans reasserted their independence in 1912 but the Chinese invaded in 1950. The monastic orders were suppressed and in 1959 the Dalai Lama fled to India. Border areas remain in dispute. Area: 1,222,070sq km (471,841sq miles). Pop. (1979) 1,740,000.

Tibetan terrier, terrier-like dog that originated in the Lost Valley of Tibet more than 2,000 years ago. Height: to 38cm (16in) at the shoulder; weight: to 14kg (30lb).

Tibia, larger of the two lower leg bones. It articulates with the femur, or upper leg bone, at the knee and extends to the ankle, where its lower end forms the projecting ankle bone on the inside of the leg. See also FIBULA; pp.146-147.

Tic, sudden and rapidly repeated muscular contraction, limited to one part of the body, especially the face. Usually involuntary, the condition may also be called a nervous tic.

Tick, any of numerous species of wingless, bloodsucking ARACHNIDS, the most notable of which are ectoparasites of vertebrates and invertebrates. Many species carry diseases (some fatal) in both wild and domesticated animals, and in man. Length: to 3mm (0.1in). Class Arachnida; order Acarina.

Ticonderoga, village in NE New York State, USA, the scene of several incidents in the FRENCH AND INDIAN WAR and the WAR OF AMERICAN INDEPENDENCE. On the route from Canada to New York, and between lakes George and Champlain, the site was defended by the French from 1755, captured by the British in 1759 and taken by the American insurgents in 1775. In spite of the efforts of Benedict ARNOLD, General BURGOYNE took the fort in 1777, on his way to eventual defeat at SARATOGA.

Tidal bore, flow of tidal water from the sea into a funnel-shaped river mouth or estuary which, opposing out-flowing river water, builds into a surface "wall" that accelerates upstream. Notable examples occur in the rivers Amazon and Severn, with bores reaching 5m (15ft) in height and travelling at 15 to 25km/h (9-15mph).

Tidal power, energy harnessed and used by man from tidal movement of the

Tidal wave, or tsunami

Earth's oceans. This can be considered only where the tidal range is greater than about 4.6m (15ft). Modern schemes involve the use of turbo-generators driven by the passage of water through a tidal barrage. The La Rance power plant in France has been working successfully since 1966 and in 1969 a small tidal power plant was completed by the USSR on the White Sea. Special turbines have been developed that can be driven by water flowing in either of two directions. See also pp.445, 764.

Tidal wave, or tsunami, large wave caused by underwater disturbances such as EARTHQUAKES or landslides. It can travel at great speeds in deep water with little surface disturbance, but builds up into a powerful, destructive wave when slowed down by the shallow water around landmasses. See also pp.202, 236, 237.

Tide, periodic rise and fall of the surface level of the oceans caused by the gravitational attraction of the Moon and Sun. Tides follow the Moon's cycle of 28 days so they arrive at a given spot 50 minutes later each day. When the Sun and Moon are in conjunction or opposition, the greatest tidal range occurs, called spring tides. When they are in quadrature, when the Moon is half-full, tidal ranges are lowest and are called neap tides. See also pp.236-237.

Tie-beam, wooden or metal strut used to hold parts of a building or a roof TRUSS together. In the Middle Ages tie-beam roofs were built, particularly in England; St Martin's Church, Leicester, is a typical example.

Tieck, Johann Ludwig (1773-1853), German ROMANTIC poet, novelist and dramatist. The fairytale *Der blonde Eckbert* (1797) ranks among his best works and the novels *William Lovell* (1795-96) and *Franz Sternbald's Travels* (1798) are his most famous.

Tien Shan, mountain system in central Asia, extending from the Pamir Mountains, USSR, through NW China to the border of Mongolia. The highest point is Pobeda Peak 7,439m (24,406ft). Length of range: 2,415km (1,500 miles).

Tientsin. See **TIJIANJIN**.

Tientsin, Treaties of (1858 and 1885), two of the so-called unequal treaties between China and Western powers. The 1858 treaty with Britain, following the second OPIUM WAR, granted various rights to foreign diplomats, merchants and missionaries, and legalized the opium trade. By the 1885 treaty, which ended the Sino-French War, the Chinese acknowledged the French protectorate of Annam, now in Vietnam.

Tiepolo, Giovanni Battista (1696-1770), Italian painter and decorator, noted for the luminous treatment of his frescoes, superb draftsmanship and the use of steep perspective. He became internationally famous for his frescoes (1749) in the Labia Palace, Venice.

Tierra del Fuego, archipelago of S Argentina and S Chile, forming the southernmost tip of South America, separated from the mainland by the Strait of Magellan. Politically it is divided into two sections: the E belonging to Argentina, the W to Chile. Discovered by Ferdinand MAGELLAN in 1520, the islands were not settled until the 1880s, when the discovery of gold and oil attracted many Europeans, Argentinians and Chileans to the area. The mountainous terrain and harsh climate limit agricultural activity; sheep are reared and there is some fishing. Area: 73,746sq km (28,473sq miles). Pop. 15,658.

Tiffany, Louis Comfort (1848-1933), US painter, designer and a leader of the Art Nouveau style in the USA. In 1878 he formed the interior decorating firm which came to be known as Tiffany Studios in 1900. It specialized in what Tiffany termed "favril" glass - freely shaped iridescent glasswork sometimes combined with various metals which created a new style in both the USA and Europe.

Tiflis. See **TBILISI**.

Tiger, large powerful cat found throughout Asia, mainly in forested areas. It has a characteristic striped coat of yellow,

orange, white and black, with the chin and underparts white. Relying on keen hearing, it hunts for birds, deer, cattle and reptiles, but does not climb trees. The largest tiger is the Siberian variety. Length to 4m (13ft) overall; weight: to 230kg (500lb). Family Felidae; species *Panthera tigris*. See also pp.312, 342.

Tiger lily, tail flowering plant that grows primarily in Japan and China. Its red to orange, black-spotted flowers have looped petals that curl back to the base of the flower. Family Liliaceae; species *Lilium tigrinum*.

Tiger moth, any of numerous species of stout-bodied, nocturnal moths with bright orange, white and black wings. The caterpillars of most species are covered with long hairs, and commonly called woolly bears. Family Arctiidae.

Tiger shark, large shark found in inshore and offshore tropical waters throughout the world. It is grey and has dark vertical bars along its sides and a long, upper lobe on its tail. A noted scavenger, it preys on other sharks, sea turtles and carrion, and is regarded as a man-eater. Length: to 6m (18ft). Family Carcharhinidae; species *Galeocerdo cuvieri*.

Tiglath-Pileser, name of three kings of Assyria. Tiglath-Pileser I (c.1115-c.1077 BC) extended the Assyrian empire to the N and restored the internal stability of the empire that had been disturbed in the previous reigns. Tiglath-Pileser II reigned c.956-943 BC. Tiglath-Pileser III (c.745-727 BC) again restored Assyrian supremacy in Babylonia, where he became king in 729 or 728 BC. He instituted the unpopular Assyrian policy of mass transportation of their defeated enemies. See also pp.1188-1189.

Tigris, river in SW Asia. It rises in the Taurus Mts of E Turkey and flows SE through Iraq, joining the River Euphrates to form the Shatt al-'Arab. The river is fast-flowing and liable to sudden flooding. There are flood-control schemes and the river's waters are used to irrigate more than 300,000 hectares (750,000 acres). The Tigris is navigable for shallow-draught vessels as far as BAGHDAD. In ancient times it was a major transport route and many great cities of Mesopotamia stood on its banks. Length: approx. 1,900km (1,180 miles).

Tijuana, city in NW Mexico, S of the US border, on the Pacific Coast. It originated around the cattle range Rancho de Tia Juana, in 1862. Tijuana gained popularity during the US prohibition era, because of the availability of alcohol; it was established as a free port in 1933. Manufactures include processed food, electronics and textiles. Pop. (1977 est.) 438,023.

Tilapia, genus of freshwater mouth-breeding fish native to the Middle East and Africa. Family Cichlidae. Species include *Tilapia mossambica*.

Tilburg, city in S Netherlands, near the Belgian border, approx. 24km (15 miles) NE of Eindhoven. The city developed as an industrial centre in the 19th century. Industries: textiles, textile machinery, dyes, leather goods. Pop. (1980) 151,799.

Tile, small piece of hard material of regular and simple shape which is used decoratively and structurally in building. Tiles commonly cover roofs, walls or floors. Although tiles are traditionally made of CERAMICS (unglazed, painted or glazed clay), other materials such as stone, glass, rubber, plastic or wood are used where they are better suited to the function required, such as waterproofing, decoration, insulation from sound or heat, or resistance to wear.

Till, in geology, sediment or drift consisting of a heterogeneous mixture of clay, sand, gravel and boulders that is deposited directly by the ice of GLACIERS. It is not sorted into strata or sizes. Tillite is till that has become solid rock.

Tillett, Benjamin (1860-1943), British trade union leader. He helped to found the dockers' union (1887), becoming its general secretary (until 1922) and organizing the 1889 dock strike. He was Labour MP for North Salford, Lancashire (1917-24, 1929-31).

Tilley, Vesta (1864-1952), British

music-hall comedienne (from 1878 to 1920) who specialized in impersonating men. She married Walter de Frece (later knighted), who composed many of her songs.

Tillich, Paul Johannes (1886-1965), German theologian and philosopher. He was ordained in the Lutheran Church, and served as chaplain in WWI. He left Germany for the USA in 1933 and taught at Union Theological Seminary and several universities.

Timbre. See **WOOD**.

Timbre, characteristic of a musical sound determined by the number and intensity of the overtones (harmonics) in relation to the principal note. Musical instruments of the same type but made of different materials have different sounds because of the different harmonics produced. The skill of the musician can also affect the timbre on most instruments. See also pp.834-835.

Timbuktu, town in Mali, W Africa. It was founded in the 11th century and later became famous throughout Europe as a market for slaves and gold. It was sacked by the Moroccans in 1591 and seized by the French in 1893. Today its most important trading commodity is salt. Pop. (1970 est.) 10,000.

Time, perception of a sequential order in all experience; also the interval perceived between two events. Time falls within the disciplines of physics, psychology, philosophy and biology. Until Albert EINSTEIN's theory of RELATIVITY, time was conceived of as absolute: a constant one-direction (past to future) flow. Since then the concept of time linked with distance in space ("space-time") has connected time with the relative velocities of those perceiving it. For human beings at velocities approaching that of light, time expands, from the point of view of a stationary observer. Measurement of time, primarily relating to naturally recurring events such as sunrise and sunset, is common in some way to most creatures. Animals and plants have been shown to exhibit a daily (circadian) rhythm in variations in temperature and metabolism. Physiological and psychological experiments have shown the operation of similar cycles in man. For more technical measurements of time expressed in human terms, many ingenious devices have been constructed, from a candle burning at a set rate to an ATOMIC CLOCK. See also pp.801, 801, 858, 859, 881.

Time and motion study, analysis of a job into the separate tasks of a worker doing it and the time for each task. Such analyses innovated by Frederick W. Taylor (1856-1915) and Frank B. Gilbreth (1868-1924), aim to eliminate wasted time and effort and unsafe methods, to increase productivity without creating fatigue. The measured task times can be used as standards in production scheduling.

Time of Troubles (1606-13), period of turmoil in Russian history following the death of Boris GODUNOV (1605). The False DMITRI, a Pretender, was made Tsar in place of Boris's son, only to be killed in 1606. The position of his successor, a nobleman Vasily Shuyski, was threatened by the Second False Dmitri who, with Polish aid, besieged Moscow for two years. After his murder in 1610 a militia for defence was organized (1611), leading to the elevation of Michael ROMANOV to the throne in 1613.

Times, The, prestigious British daily newspaper, founded by John WALTER in 1785 as *The Daily Universal Register* and renamed *The Times* in 1788. It became part of the Thompson Organization in Jan. 1967, who subsequently sold it to Rupert Murdoch's News International. Industrial disputes regularly put the paper's future in jeopardy.

Time scale, in geology, system of assigning ages to formations. It is based on the stages of evolution and falls into two grand divisions: the Cryptozoic (before 570 million years ago), which is characterized by a lack of fossils, and the Phanerozoic, divided into eras which are further divided into periods. See also pp.268-269.

Time-space distortion, in the theory of RELATIVITY, the bending of the SPACE-TIME continuum so that its geometry is no longer Euclidean. This effect is caused by very strong gravitational fields such as that found near a BLACK HOLE where the distortion is so great that light leaving the black hole is bent round upon itself and cannot escape. See also EUCLIDEAN GEOMETRY; pp.858, 859.

Time switch, device used to switch an electric circuit on or off at a pre-arranged time; its mechanism is similar to that of an alarm clock. Time switches are commonly used domestically to control ovens, audio equipment and heating systems.

Time zone, any of 24 longitudinal divisions of the Earth established for the purpose of determining local mean SOLAR TIME. Within each zone the overall local time is standardized and differs from time in a neighbouring zone, usually by one hour. Time zones east of the Greenwich (0°) meridian are various numbers of hours ahead of Greenwich Time; zones west of it are various hours behind. By convention, although zones are meant to be equal, they are usually made to coincide with country or state frontiers for convenience, and are sometimes divided into half-hour intervals even within the same country. See also GMT.

Timisoara, city in W Romania, on the Bega Canal. An ancient Roman settlement, it was ruled by the MAGYARS from 896, annexed to Hungary in 1010 and ruled by the Turks from 1552 to 1716. It was returned by Austria-Hungary in 1716 and passed to Romania in 1920. The city is the site of a 14th-15th century Hunyadi castle (which is now a museum) and a university (1962). Industries: engineering, food processing, tobacco, chemicals, textiles, machinery. Pop. (1974) 210,520.

Timon of Athens (1607-08), tragedy by William SHAKESPEARE, printed in the first Folio of 1623. It has been suggested that it may be a rough draft of a play or the result of collaboration with an unknown author.

Timor, largest of the Lesser Sunda Islands in the Malay archipelago, part of INDONESIA. The Portuguese began trading with the island c.1520, and part of the island was taken by the Dutch a century later. Boundaries between Dutch and Portuguese possessions there were set by treaties in 1860 and 1914. The island was occupied by the Japanese during WWII. Dutch Timor passed to Indonesia in 1950, and Portuguese Timor was incorporated in 1975. Industries: fishing, tobacco, coffee, sugar, sandalwood. Area: 33,857sq km (13,074sq miles). Pop. (1970 est.) 3,000,000.

Timoshenko, Semyon Konstantinovich (1895-1970), Soviet military commander. He fought for the BOLSHEVIKS during the Russian Civil War (1918-20), and rose to command the Soviet armies that invaded Finland in 1940. He later became Commissar for Defence (1940-41). In 1941 he recaptured Rostov from the Germans and helped to relieve Moscow.

Timothy, Epistles to, two letters in the New Testament attributed to St PAUL, encouraging faith in Christ and demanding orthodox belief. Together with the Epistle to Titus, they are called the Pastoral Epistles.

Timpani, or kettledrums, principal percussion instruments in a symphony orchestra. They are hemispherical vessels of copper or brass with single skins, tuned by pedals or screws and struck with sticks with hard felt heads. Military kettledrums were played on horseback by Asian nomads and introduced to Europe by the Crusaders c.1100. Modern timpani were introduced in the 17th century.

Timur. See **TAMERLANE**.

Timurid Dynasty (1370-1506), Turkicized Mongol family which ruled Transoxiana, approximating to modern Uzbekistan. It was founded by TAMERLANE (also known as Timur) who became sole ruler in 1369 and made his capital at Samarkand. His campaigns extended his empire, which was largely to die with him, into Iraq, Syria, Caucasasia and India. In the following century, the Timurid kingdom was twice

divided and came to an end when the Uzbeks expelled BABUR, who went on to found the MUGUL EMPIRE in India.

Tin, METALLOID element (symbol Sn) of group IVA of the PERIODIC TABLE, known from ancient times. Its chief ore is cassiterite (an oxide). It is used as a protective coating for steel in tin plate, and in solder, pewter, type metal, and similar alloys. Two ALLOTROPES exist: the common metallic form (white tin) changes slowly below 13.2°C (55.8°F) to a brittle non-metallic form (grey tin). Properties: at. no. 50; at. wt. 118.69; s.g. 5.75 (grey), 7.31 (white); m.p. 232°C (449.6°F); b.p. 2,270°C (4,118°F); most common isotope Sn^{118} (24.03%).

Tinamou, grassland and jungle bird found from Mexico to S. South America. It has a heavy body with camouflaging brown or grey plumage, a thin curved bill, small weak wings and a short tail. The male incubates the eggs in a nest on the ground. Length: 23–38cm (9–15in). Family: Tinamidae.

Tinbergen, Jan (1903–), Dutch economist who has developed dynamic models using mathematical methods to analyse economic processes. He shared the first Nobel Prize in economics in 1969, and his publications include *Shaping the World Economy* (1962).

Tinbergen, Nikolaas (1907–), Dutch ethologist. He shared with K. LORENZ and K. von FRISCH the 1973 Nobel Prize in physiology and medicine for his pioneering work in ETHOLOGY. Tinbergen studied how in animals certain stimuli evoke specific responses, and emphasized the importance of observing animals under natural conditions. See also p.170.

Tindemans, Léo (1922–), Prime Minister of Belgium from 1974 to 1978. A Christian Socialist, he was Mayor of Edegem from 1965, Minister of Community Affairs (1968–1971), Minister of Agriculture and Middle Class Affairs (1972–73) and Deputy Prime Minister (1973–74).

Ting, Samuel Chao Chung (1936–), US physicist who researched into ELEMENTARY PARTICLES. He used a SYNCHROTRON to fire PROTONS at a BERYLLIUM target and then observed the resultant decaying particles. From the results he found evidence for the existence of a heavy sub-atomic particle, which he named the J particle. At the same time but working independently, Burton RICHTER discovered the same particle, which he named psi. For this discovery Ting and Richter shared the 1976 Nobel Prize in physics.

Tinguely, Jean (1925–), Swiss sculptor whose work incorporated movement through small motors. He experimented with motorization and produced progressively complicated machines, some of which were self-destructive, such as *Homage to New York* which destroyed itself in 1960 when set into motion. See also p.1685.

Tinned food. See CANNING.

Tino di Camaino (c.1285–1337), Sienese sculptor. In charge of the works at Pisa Cathedral from 1315, he was commissioned to make a tomb for the Emperor Henry VII. From 1319 to 1320 he supervised works at Siena Cathedral. Later he worked in Florence and then settled in Naples, where he made monuments for the Angevin rulers.

Tin oxide, either of two oxides: stannous or tin (II) oxide, SnO , a black powder used as a reducing agent; stannic or tin (IV) oxide, SnO_2 , a white powder occurring naturally as the mineral CASSITERITE. It is used in ceramics, glass and cosmetics.

Tintoretto (Jacopo Robusti) (1518–94), Italian painter. A major exponent of the Venetian School, he was a leading artist for middle class patrons and Venetian churches. He owed much in style to TITIAN, with whom it is supposed he studied, and his master's influence is particularly evident in the latter part of his career. By 1539 he was a master and established independently. The arresting appeal of his work reflects Tintoretto's sensitivity to lighting and the importance of the angle of portrayal. *The Finding of*

the Body of St Mark (1562) and *The Last Supper* (1592–94) are examples of this. His religious paintings are filled with mystery and personal experience and in the series depicting the life of Christ (1565–87) for the Scuola di San Rocco are some of the finest examples of Italian painting.

Tipperary, county in S. Republic of Ireland, in Munster province. The region is part of the central plain of Ireland but there are hills in the S; the Suir and Shannon are the principal rivers. The soil is fertile and Tipperary is one of the best farming regions of Ireland. Dairy farming is the most important activity; the principal industry is food processing. Administratively, the county is divided into the North and South Ridings. The county town is Tipperary, a market town. Area of county: 4,255sq km (1,643,164sq miles). Pop. 123,196.

Tippet, Sir Michael Kemp (1905–), British composer. His music includes symphonies, piano and chamber music, the oratorio *A Child of our Time* (1941) and several operas such as *The Midsummer Marriage* (1952), *King Priam* (1962) and *The Ice Break* (1977). In some compositions he used British folk and American Jazz and Negro elements.

Tipu Sahib (1749–99), Indian ruler. Sultan of Mysore (1782–99). He fought the MAHRATTAS and the British in the service of his father, Hyder Ali, but concluded peace with the British in 1784. His negotiations with the French provoked a British invasion of Mysore in 1799 and Tipu was killed while defending his capital at Seringapatam.

Tiradentes (1748–92), real name Joaquim José de Silva Xavier, leader of the first major conspiracy against Portuguese rule in Brazil (1789). Tiradentes ("Tooth-puller"), concentrating on the grievances of the inhabitants of the state of Minas Gerais, called for complete independence. The revolt was crushed and Tiradentes was executed.

Tiranë (Tirana), capital of ALBANIA, approx. 27km (17 miles) inland from the Adriatic Sea, in E central Albania. It was founded in the early 17th century by the Ottoman Turks, although most of the present city dates from 1920 when it was chosen as the country's capital. It is the industrial centre of Albania; manufactures include metal goods, textiles and food products. There is also some coal mining. Pop. (1978) 198,000.

Tirpitz, Alfred von (1849–1930), German statesman and admiral. He became Secretary of State in 1897 and Grand Admiral in 1911. He increased the German navy enormously by 1914. His policy of unrestricted submarine warfare against Britain led to the sinking of the *Lusitania* in 1915. He resigned in 1916.

Tirso de Molina (b.1584–1648), Spanish playwright, b. Gabriel Téllez. After a period as a monk, he was inspired by Lope de VEGA and started writing plays, producing over 300 in his career, 80 of which survive. His play *The Deceiver of Seville* (1630) is the earliest known dramatic portrayal of DON JUAN.

Tischbein, name of a family of 18th-century painters. The best-known, Johann Heinrich Wilhelm (1751–1829), was a friend of GOETHE whose portrait *Goethe in the Campagna*, he painted in 1786. He also supervised the engravings of the Greek vases belonging to Sir William Hamilton. Other Tischbeins of importance include Johann Heinrich the Elder (1722–89), a court painter, and Johann Friedrich (1750–1812) and Anton Wilhelm (1730–1804), both portrait painters.

Tiselius, Arne Wilhelm Kaurin (1902–1971), Swedish biochemist. In 1937, while working with Theodor SVEDBERG on electrophoresis, he observed that since PROTEINS are electrically charged in a colloidal solution a current passing through the solution causes different proteins to move at different speeds and therefore separate. He built a machine that would take advantage of the effect and for this work received the 1948 Nobel Prize in chemistry.

Tissé, Edvard (1897–1961), Russian film

cameraman of Swedish descent. He worked as war photographer in WWI and in 1924 began a long partnership with the Russian director, Sergei EISENSTEIN. Their films include *Strike* (1924), *The Battleship Potemkin* (1925), *Alexander Nevsky* (1939) and *Ivan the Terrible* (1942, 1946).

Tissot, James Joseph Jacques (1836–1902), French painter and etcher. He spent ten years in England after the Franco-Prussian War of 1870, and is remembered mostly for his charming illustrations of Victorian life, eg *My Heart is Poised between the Two* (1877).

Tissot, Janou, née Lefebvre (1945–), French rider, who became the first woman to win two show-jumping world championships, riding *Rocket*, when she won the women's world championship in 1970 and 1974. She was a team silver medalist at the 1964 and 1968 Olympic Games and women's European champion in 1966.

Tissue, in biology, substance of a living body or organ consisting of CELLS. Tissues vary in structure and complexity and may be loosely classified according to function into epithelial, connective, muscular, nervous and glandular tissues, although each of these categories contains more than one different type of cell.

Tissue culture, in biology, artificial cultivation of living TISSUE in sterile conditions in laboratories for research or to help in diagnosis of diseases.

Tit, or titmouse, any of several species of small garden and woodland songbirds, particularly of the family Paridae. European species include the willow tit (*Parus montanus*), the blue tit (*P. caeruleus*) and the great tit (*P. major*). The name is also used for other birds whose appearance or behaviour resembles that of the Paridae. Length: to 17cm (6.5in). See also pp.83, 304, 307.

Titan, largest satellite of the planet SATURN. It is comparable in size with MERCURY and is believed to support a thin atmosphere, chiefly of methane. Diameter 4,800km (3,000 miles); mean distance from planet 1,220,000km (758,000 miles); mean sidereal period 15.97 days. See also pp.964–965, 1048–1049.

Titania, in folklore, queen of the fairies and wife of Oberon. In the writing of OVID she represents DIANA at the head of her nymphs. According to Shakespeare's *A Midsummer Night's Dream* she quarrelled with her husband over a changeling boy. **Titania**, largest of the five satellites of the planet URANUS. It orbits at a distance of 438,370km (272,270 miles) from Uranus and has a diameter of approx. 1,800km (1,120 miles). The satellite has a mean sidereal period of 8.7 days. See also pp.967, 967.

Titanic, British luxury passenger liner that sank, taking two and a half hours (14–15 April 1912) to do so, on her maiden voyage. The disaster occurred after the liner struck an iceberg in the North Atlantic. Of the 2,224 passengers, many of them US and British celebrities, 1,513 were drowned. The disaster, led to the first International Convention for Safety of Life at Sea (1913).

Titanium, common metallic element (symbol Ti) of the first TRANSITION ELEMENTS, discovered in 1791 by William Gregor. It is found in many minerals; chief sources are ILMENITE (iron titanate) and RUTILE (an oxide). The element is used in steels and other alloys, especially in aircraft and other applications where strength must be combined with lightness. Properties: at. no. 22; at. wt. 47.90; s.g. 4.54; m.p. 1,675°C (3,047°F); b.p. 3,287°C (5,949°F); most common isotope Ti^{48} (73.94%).

Titanium oxide, either of two oxides. Titanium monoxide, TiO , is a white powder formed by reducing the dioxide at 1,500°C (2,732°F). It has no industrial uses. Titanium dioxide, TiO_2 , is a white or grey powder, according to its purity. It occurs naturally as the mineral RUTILE from which it is extracted by chlorination or from the mineral ilmenite by treating it with sulphuric acid. It is used as a white pigment in ceramics, glass, cosmetics, paper and paints.

Titans, **The**, in classical mythology, twelve primeval gods and goddesses who were the sons and daughters of Uranus and Gaia. The Titans were Chronos, Iapetus, Hyperion, Oceanus, Coeus, Creus, Thea, Rhea, Mnemosyne, Phoebe, Tethys and Themis; Atlas, Prometheus and Hecate were descended from them. They were the order of gods which preceded the Olympians who, led by Zeus, overthrew them and condemned them to Tartarus.

Titchener, Edward Bradford (1867–1927), British psychologist. With Wilhelm WUNDT, he was a leader of the STRUCTURALISM school of psychology which encouraged studies in psychology to be more scientific and systematic. His major publication is *Experimental Psychology* (1901–05).

Tithe, levy or tax of one-tenth. It is prescribed in the Old Testament and was adopted by the Christian Church, which required parishioners to give up a tenth of their land, stock, or harvest for the purposes of maintaining churches, the support of priests, and as charity for orphans, widows and the landless. Tithes were obligatory in the Middle Ages, but in the following centuries were gradually abolished in most European countries, being commuted to money rents in England in 1836. See also p.1329.

Titian (Tiziano Vecellio) (c.1487–1576), Venetian painter. He studied under the BELLINIS and GIORGIONE, and his early works include *Voices Picture of Jacopo Pesaro* and *St Peter with Donor* (c.1506). From about 1515 Titian's work is characterized by livelier colour, as in the allegorical *Sacred and Profane Love and Three Ages of Man* (c.1515). In 1518, Titian began a series of mythological pieces for Alfonso d'Este, which include *Worship of Venus* (1518–19), *Bacchanal* (1519–22) and *Bacchus and Ariadne* (1523). After 1530 his style became more restrained; he used related rather than contrasting colours, as in the famous *Venus of Urbino* (1538–39). In 1533 he painted a portrait of the Holy Roman Emperor CHARLES V, and was later patronized by PHILIP II of Spain. His works of the 1550s such as *Rape of Europa* (1559–62), are highly poetic visions, in contrast to the mythological and erotic portrayals of earlier times. After 1560 his works gradually expressed a new warmth, harmony and pathos. Autumnal and sensitive colouring and subtle light effects characterize his later works, such as *Shepherd and Nymph* (c.1570) and *Pieta* (1576). See also pp.1390–1391.

Titicaca, lake on the Peru-Bolivia border, draining S through the River Desaguadero into Lake Poopó. It is the highest large navigable lake in the world. Altitude: 3,810m (12,500ft). Length: 193km (120 miles); depth: 280m (920ft).

Tito, (1892–1980), Yugoslav Communist leader. Premier from 1945, and President 1953 b. Josip Broz. As a Croatian soldier in the Austro-Hungarian army in WWI, he was captured by the Tsar's troops (1915) but released by the Communists after the Revolution (1917). Returning to Yugoslavia, he helped organize the Yugoslav Communist Party and, as one of its key members, served a jail term after it was outlawed (1928–34). In WWI he led the partisan resistance forces in Croatia, discrediting his rival Draza Mihajlović, who led the Chetnik guerrillas in Serbia, and became so powerful that he was able to establish a Communist government in 1945 that achieved international recognition. Russian efforts to control Yugoslavia soon led to a split between Tito and STALIN, who expelled the nation from the Communist bloc in 1948. Tito then became an important figure to many THIRD WORLD countries. Internationally, Tito gained world respect through Yugoslavia's policy of non-alignment. See also pp.1725, 1738, 1739.

Titration, method used in analytical chemistry to determine the concentration of a SOLUTION by volumetric means. A solution of known concentration is added in measured amounts from a burette (a graduated glass tube) to a liquid of unknown concentration until the reaction

is complete (as shown by an INDICATOR). The volume removed from the burette enables the unknown concentration to be calculated. See also pp.904-905.

Titus (c. AD 40-81), Roman emperor (r. 79-81), elder son of VESPASIAN. He campaigned in Britain and Germany and captured and destroyed Jerusalem in 70 after a Jewish revolt. He was briefly (79) co-ruler with Vespasian, then sole emperor. As emperor he stopped persecutions for treason, built lavish baths and gained great popularity. He died childless and his brother DOMITIAN erected the Arch of Titus in his memory. See also p.1241.

Titus, Epistle to, letter written by ST PAUL to Titus, one of his earliest converts. It is valuable for its elucidations of Christian behaviour and duties: deacons and bishops are warned against false teachers; young men are admonished to be sober-minded and young women to be chaste, discreet and obedient to their husbands. The Epistle to Titus and the two Epistles to TIMOTHY are called the Pastoral Epistles.

Titus Andronicus, (1594), early work attributed to William SHAKESPEARE, but possibly a collaboration. The play, full of bloody horrors, was one of several on the same subject extant in Shakespeare's time.

Tiw, or Tyr, in Germanic mythology, powerful sky god. He was also associated with war, government and justice. The word Tuesday derives from Tiw's day.

Tiwi, semi-nomadic native Australian people that live on the islands of Melville and Bathurst off Northern Territory. They live by hunting and gathering and practise totemism and patriarchy. Their society is noted for its extreme polygamy, men having up to 29 wives.

Tizard, Sir Henry Thomas (1885-1959), British physical chemist. He is best known for his chairmanship of the Committee for the Scientific Survey of Air Defence (1933-42) and his insistence on the development of radar. In 1942 he became president of Magdalen College, Oxford.

Tlaloc, AZTEC god of rain. He was propitiated by the sacrifice of babies and children, who were then cooked and eaten. If the victims cried, rain was supposed to follow. See also p.1906.

Tlatelolco, the commercial centre of the Aztec capital of TENOCHTITLÁN. Most of it was destroyed by the Spanish in 1521, but numerous buildings, shrines and tombs have been excavated.

tlaxcala, tribe of Mexican Indians who occupy the state of Tlaxcala, Mexico. They supported CORTÉS against the AZTECS, and were largely responsible for the defeat of MONTESUMA's army in 1521. See also p.1874.

TNT, (trinitrotoluene), explosive organic compound with the formula $\text{CH}_2\text{C}_6\text{H}_2(\text{NO}_2)_3$. It was discovered in 1863 and its stability to shock made it one of the safest high explosives. See also p.583.

Toad, any of numerous species of tail-less amphibians found throughout the world, except in Australasia. Most species are short and rotund, move with a hopping gait and have no teeth in their upper jaws. Parotid glands behind the eyes secrete an irritating substance to deter predators. Toads are differentiated from frogs by being toothless and having a rougher, bumpy skin and rounder body with shorter legs. Length: 2-25cm (1-10in). Order Anura; family Bufonidae. See also TADPOLE; pp.3, 3, 64-65, 302, 317, 328.

Toadfish, any of 40 species of bottom-dwelling fish that live in temperate and tropical seas. It has a large mouth and head, a tapered body and a long ventral fin. Most species are grey, green, yellow or brown with dark speckled markings. The dorsal fin spines of some species are venomous. Length: to 30cm (12in). Family Batrachoididae. See also p.63.

Toadflax, any of several species of annual and perennial plants with leaves resembling those of flax plants. Some species are grown as ornamentals. The common toadflax (*Linaria vulgaris*), or butter-and-eggs, has dense clusters of two-lipped,

pale yellow flowers. Family Scrophulariaceae.

Toad of Toad Hall (1929), play by A. A. MILNE, adapted from the novel *The Wind in The Willows* by Kenneth GRAHAME. A popular children's classic, it is revived regularly and tells the story of the animals Ratty, Mole and Toad.

Toadstool, popular name for the fruiting body of a FUNGUS of the class Basidiomycetes. The name usually refers to inedible species and describes the stool-like appearance of the reproductive organ, which is the only visible part of the fungus, the remainder being mycelium hidden in the substratum. It consists of a stem (which may sprout from a cup or vulva) and a head (on which the spores are borne on gills or in tubes). A ring, or annulus, on the stem marks the attachment of the cap before opening. The gills or tubes in which the spores are carried are arranged vertically, so that the spores fall out when ripe and are carried away by the wind. See also pp.350, 350, 354, 355, 355.

Tobacco, herb native to the Americas, but cultivated throughout the world. It has large leaves with no stalk, and white, pink, or red star-shaped flowers. Height: 0.6-2m (2-6ft). *Nicotiana tabacum* is the principal cultivated species. American Indians smoked the leaves of tobacco and used them medicinally well before the arrival of Europeans in the New World. Seeds were brought to Europe in about 1520-30. Settlers in Virginia obtained seeds from the Spanish colonies (1612) and soon tobacco was the major crop of the Virginia colony and America's first export. Leaves are prepared for smoking by curing (drying) and then ageing. Family Solanaceae (NIGHTSHADE family). See also pp.190, 357, 667.

Tobacco mosaic virus (TMV), simple virus used in mosaics concerning the transference of the genetic code. It consists of a single helix of RNA containing some 6,400 NUCLEOTIDES. This is coated with some 2,100 molecules of a single PROTEIN, each molecule of which comprises a polypeptide chain of 158 AMINO ACIDS. The sequence of these acids has been determined.

Tobago. See TRINIDAD AND TABAGO.

Tobey, Mark (1890-1976), us painter whose work borrowed motifs from Asian calligraphy. A lyrical treatment of light and colour are revealed in his *San Francisco Street* (1941). He used his technique of "white writing" initially to portray city scenes and later to express abstract visions.

Tobias, in the Old Testament, son of TOBIT. Tobias helped the angel RAPHAEL drive away the demon Asmodeus. Raphael, in turn, cured the blindness of Tobit and induced Tobias to marry SARAH of Ecbatana.

Tobit, Book of, one of the books in the Roman Catholic and Eastern Orthodox Old Testament, regarded by Protestants and Jews as part of the APOCRYPHA. A travel narrative told by Tobit's son, TOBIAS, the story involves Tobias's recovery of his family's wealth and Tobit's recovery of his sight through the efforts of the angel RAPHAEL in disguise.

Toboggan, small sled used to travel down ice or snow-covered slopes.

Tobogganing, winter sport in which the rider either sits on a TOBOGGAN (lugeing), or lies prone on it (Cresta tobogganing). Lugeing originated in Austria and became an Olympic sport in 1964, and there was a Cresta competition at the Olympics in 1924, and regularly after 1948.

Tobruk, port city in NE Libya, on the Mediterranean Sea. Its strategic location on the coastal road made it the objective of both the Germans and the British in WWII; at different times it was taken by both armies in the period 1940-42. Its present source of income is trade. Pop. (1970 est.) 28,000.

Tocantins, river in NE Brazil. It rises in s Goiás state and flows N to the River Para. Rapids make the river only partly navigable. Length: 2,700km (1,677 miles).

Toccata, form of instrumental composition from the early 17th century. GABRIELI made early use of the form as a showy

piece with rapid, even flowing notes and frequent repetition of similar figures. BACH's organ toccatas are well known for their virtuosic display.

Toc H, inter-denominational Christian association devoted to social work. It is open to all men over the age of 16 and now includes a Women's Association. It originated in Talbot House, a soldiers' club opened in 1915 at Poperinghe, Belgium, under an Anglican chaplain, "Tubby" CLAYTON. It was named after Lieut. Gilbert Talbot, who was killed in action at Ypres in 1915. It was re-founded in London in 1920 and expanded rapidly within Britain and other English-speaking countries. It was incorporated by Royal Charter in 1922 and now has many branches and residential houses. Its name is derived from the army signallers' way of pronouncing T H (Talbot House).

Tocqueville, Alexis de (1805-59), French historian. His works include the political study *De la Démocratie en Amérique* (1835) and *L'Ancien Régime et la Révolution* (1856). He was a vigorous opponent of Socialism and Republicanism until Louis Napoleon's coup in 1851.

Todd, Alexander Robertus, Baron (1907-), British biochemist who was awarded the 1957 Nobel Prize in chemistry for his research into the structure and synthesis of NUCLEOTIDES and nucleotide COENZYMES. He synthesized and deduced the structure of all the naturally occurring nucleotide components of the NUCLEIC ACIDS. This work laid the foundation for the determination by JAMES WATSON and FRANCIS CRICK of the structure of DNA and helped towards an understanding of the mechanisms of gene action. Todd synthesized ADP in 1947 and ATP in 1949, compounds essential for the utilization of energy in CELLS.

Todd, Mike (1907-1958), us stage producer. He produced several revues on Broadway, going into film production in 1953 and developing a new wide screen process called Todd-AO. His major film is *Around the World in Eighty Days* (1956).

Todd, Reginald Stephen Garfield (1908-), Rhodesian politician, b. New Zealand. He was a Southern Rhodesian MP (1943-58) and president of the United Rhodesia Party and Prime Minister (1953-58). In 1961 he founded the New Africa Party. From 1972 to 1976 he was under house arrest. In 1976 he was the adviser to Joshua NKOMO at the Geneva conference on Rhodesia.

Toga, mantle or outer garment worn by Roman citizens, consisting of an oval-shaped piece of cloth. Draped around the body to form a flowing skirt, the remainder of the material was pulled up over the head or shoulders. Its colour and pattern depended upon the status of the wearer.

Togo Heihachiro (1847-1934), Japanese admiral. He was trained at Greenwich naval academy, London (1871-78), and served in the SINO-JAPANESE WAR (1894-95) and the RUSSO-JAPANESE WAR (1904-05). He defeated the Russian fleet at Port Arthur (1904) and destroyed Russia's Baltic fleet at TSUSHIMA (1905). See also p.1625.

Togo, small republic in w Africa. Formerly mandated to France, Togo became independent in 1960. Most of the population earn a living off the land; the chief cash crops are cocoa and coffee. Phosphates are the principal export. Manufacturing is on a small scale. The capital is Lomé. Area: 56,000sq km (21,622sq miles). Pop. (1977) 2,348,000. See also p.2150.

Togoland, historic region of w Africa. Originally peopled predominantly by the Ewe, the area was raided for slaves until the second half of the 19th century. By the end of the century Germany had established military and economic predominance and it became a German protectorate. After WWI Togoland was divided into a French mandate, which achieved independence in 1960 as the Republic of Togo, and a British mandate, which became part of the independent state of Ghana in 1957.

Tojo, Hideki (1885-1948), Japanese

general and political figure. As Prime Minister (1941-44) during WWII he authorized the PEARL HARBOR attack and was overlord of all aspects of the Japanese war effort. He was tried for war crimes by the ALLIES after the defeat of Japan, was found guilty and hanged.

Tokamak, Russian experimental nuclear fusion reactor consisting of a toroidal vessel in which a PLASMA (hot ionized gas) is contained by a magnetic field produced by coils wound over the reaction vessel. Several versions of these devices now exist outside the USSR. See also NUCLEAR REACTOR.

Tokelau Islands, group of islands in the w central Pacific Ocean, N of Samoa, it was formerly known as the Union Islands. The group came under British rule in 1877 and became a territory of New Zealand in 1948. The principal product is copra. Area: approx. 10sq km (4sq miles). Pop. 1,687.

Token economy, system of rewards allocated within an institution such as a school or psychiatric hospital. The desired behaviour or work is rewarded with tokens, which may be gold stars or counters, and these tokens may accumulate to be exchanged for either more tangible rewards or different coloured stars. See also p.1119.

Tokugawa, Japanese family holding the title of shōgun and maintaining effective control of Japan (1603-1867). Under their shogunate, centralized feudalism was based on an intricate system of allegiances of autonomous daimyō (feudal lords) to the Tokugawa family, who controlled much of the country's wealth and farmland in militarily strategic locations. The period of their rule is notable for its intense isolationism, for improvements in farming, an increase in domestic trade and the growth of literacy and cultural advancement. The regime declined in the 19th century. See also pp.1502-1503.

Tokugawa Ieyasu. See IEYASU TOKUGAWA. **Tokyo**, largest city in Japan, at the head of Tokyo Bay. Founded in the 15th century as Edo, it became the capital of the TOKUGAWA Shogunate under IEYASU (1603). The city grew rapidly in the 18th and 19th centuries, and as the Japanese Reformation re-established Imperial power, it was made the capital of Japan in 1868 (replacing Kyoto) and renamed Tokyo ("eastern capital"). Much of Tokyo was destroyed by an earthquake and fire in 1923; the city was reconstructed however, as a modern metropolis. It was further modernized after extensive us bombings caused widespread destruction in 1944 and 1945. Tokyo is now the centre of a massive industrial-commercial belt extending along the w shore of Tokyo Bay, and including Kawaiki and Yokohama, the latter serving as seaport for Tokyo and the vicinity. Modern Tokyo contains more than 200 colleges and universities, including the University of Tokyo (1877). Products include metals, machinery, electronic and transit equipment, chemicals, textiles and consumer goods. Pop. (1979) 8,220,000.

Tolbert, William Richard (1913-80), President of Liberia from 1971. He was a member of the House of Representatives (1943-51) and became Vice-President (1951-71).

Toledo, Francisco de (c. 1515-84), viceroy of Peru (1569-81), one of the ablest bureaucrats to serve in colonial Spanish America. He maintained order in Peru, drawing up a law code (using many INCA laws) and quelling the revolt (1570-71) of TUPAC AMARU.

Toledo, city in Spain, on the River Tagus 66km (41 miles) ssw of Madrid; capital of Toledo province. The city was captured by the Romans in 192 BC. It flourished as the capital of the Visigoth kingdom in the 6th century AD. Toledo was a centre of Moorish culture from 712 to 1085. It became famous throughout the world for its sword blades. After the 15th century the city declined as a commercial centre but became the spiritual capital of Catholic Spain; it was the seat of the Grand Inquisitors. Landmarks include the Cathedral (1226), one of the finest Gothic structures

in Spain and the Alcázar, a Moorish fortified palace. Many buildings contain the works of El Greco. Industries: metalwork, silk products, surgical equipment. Pop. 44,382.

Toledo, port in NW Ohio, USA, at the mouth of the Maumee River in Lake Erie; a major GREAT LAKES shipping point. The city grew with the construction of canals and railways, and the development of the coalfields of Ohio. The University of Toledo dates from 1872. Industries: glass, machine tools, oil refining, plastics, machinery. Pop. (1980) 354,265.

Tolerance, in biology, the capacity in an organism to withstand, endure or absorb a substance or its introduction into the body, without ill effect.

Tolerance, Act of (1689), English legislation permitting freedom of religious practice to PROTESTANT dissenters, subject to their taking oaths of allegiance to William and Mary. It modifies the TEST ACT, but it did not remove the political and social disabilities of dissenters, nor did it extend to Roman Catholics. See also pp.1446, 1447.

Tolkien, John Ronald Reuel (1892–1973), English philology scholar. He achieved fame with his imaginative epic trilogy, *The Lord of the Rings* (1954–55). Both his prose style and world of fantasy are reminiscent of the Norse sagas and Anglo-Saxon poetry that he taught at Oxford University. The trilogy is introduced by *The Hobbit* (1937).

Toll, originally the right to levy certain dues, later the name for the dues themselves. They were levied in medieval England at town markets for the upkeep of local roads and bridges. As a charge paid at the toll gate at one end of some roads and bridges they survive today.

Toller, Ernst (1893–1939), German EXPRESSIONIST playwright and poet who was imprisoned from 1919 to 1924 for Communist activities. His plays of social protest include *Die Wandlung* (1919, trans. *Transfiguration*, 1935) and *Masse-Mensch* (1920, trans. *Man and the Masses*, 1923).

Tolpuddle Martyrs, name given to six British farm labourers sentenced in 1834 to seven years' transportation to Australia for trade union activities in Tolpuddle, Dorset. The government hoped that punishment of such severity would prevent further working-class unrest but the upsurge of popular support for the six men was so great that their sentences were remitted in 1836. See also pp.1571, 1571.

Tolstoy, Aleksei Nikolaievich (1828–1910), Russian novelist, a distant relation of Leo Tolstoy. Initially opposed to the BOLSHEVIK revolution, he returned to the USSR in 1923 to publish the historical trilogy *Khozheniye po Mukam* (1920–41; tr. *The Road to Calvary*, 1946). His unfinished *Poyot Pervyy* (1929–45; trans. *Peter the Great*, 1956) is considered his best work.

Tolstoy, Count Leo Nikolaievich (1828–1910), Russian novelist and philosopher. While serving in the army he wrote his trilogy *Childhood, Boyhood and Youth* (1852–57). He took part in the defence of Sebastopol in 1854, descriptions of which appeared in the journal *Contemporary* and were noted for their unvarnished picture of the war. He left the army and lived on his estate and in St Petersburg, where he wrote *War and Peace* (1865–69) and *Anna Karenina* (1875–77). In 1879 he underwent a spiritual crisis which culminated in his conversion to the Christian doctrine of love and non-resistance to evil. These beliefs are reflected in his later works, such as *The Death of Ivan Ilyich* (1886) and *Resurrection* (1899). See also pp.1575, 1575.

Toltec, major pre-Columbian culture, powerful from AD 900 to 1200, with its centre in the Hidalgo region of Mexico. Toltec is an Aztec derivation from the name of their urban centre at Tollán. A wide-ranging people, their influence extended from the later capital at Tula as far as Guatemala. See also pp.1364, 1365.

Toluene, (methylbenzene), aromatic hydrocarbon, formula $C_6H_5CH_3$. Manu-

factured from the fractional distillation of coal-tar or from petroleum, it is a colourless, inflammable liquid widely used as an industrial solvent and in the manufacture of chemicals. Properties: s.g. 0.87; m.p. -94.5°C (-138.1°F); b.p. 110.7°C (231.3°F).

Tomato, fruit native to the Americas. The plant leaves are deeply toothed or lobed and yellow flowers produce the familiar green fruit which turns reddish-orange as it ripens. The plant was cultivated in Europe as early as 1544 and introduced to the American colonies about 1629. It was not eaten until the 16th century because it was believed to be poisonous and was grown merely as an ornamental. Species *Lycopersicon esculentum*. The small cherry tomato is a variety (*cerasiforme*). *L. pimpinellifolium*, the currant tomato, produces a very small fruit. Family Solanaceae. See also pp.652, 667, 684, 685.

Tombs, Clyde William (1906–), US astronomer. Working at the Lowell Observatory, Flagstaff, Arizona, he discovered PLUTO, in 1930. See also p.967.

Tombolo, bar connecting an island with the mainland. It is usually formed by the growth of a sand spit until it reaches the island. See also p.231.

Tombocou. See TIMBUKTU.

Tom Brown's Schooldays (1857), novel by Thomas Hughes. A description of the author's experiences at Rugby School when Dr Thomas ARNOLD was headmaster, the work was an immediate success. It is the prototype of school stories and is acclaimed not only for its literary merit but also for its documentary value.

Tom Jones, A Foundling (1749), novel by Henry Fielding. A masterpiece of comic-didactic fiction, the work describes the adventures of the generous, manly but dissipated hero, Tom Jones, from his obscure birth to his ultimate vindication and moral regeneration as Squire Allworthy's heir. See also p.1478.

Tommaso da Modena (c.1325–79), Italian painter who produced decorative frescoes for the Chapter House of S. Nicolo, Treviso. This series, depicting Dominican scholars, is reminiscent of earlier manuscript illumination.

Tommy gun, popular name for a machine carbine, the Thompson submachine gun. Patented in the USA in 1920 by a retired army officer, John T. Thompson, it weighed about 4.5kg (10lb). It used 0.45in calibre ammunition from a box magazine holding 20 rounds or a drum holding 50 rounds. It achieved notoriety during the PROHIBITION era as a gangster weapon.

Tomography, technique of X-ray photography in which details of only a single slice or plane of body tissue are shown.

Tomonaga, Shin'ichirō (1906–), Japanese physicist who during WWII derived a formulation of quantum electrodynamics; that branch of QUANTUM THEORY concerned with the interactions of charged elementary particles with each other and with the electromagnetic field. He shared the 1965 Nobel Prize in physics with Richard P. FEYNMAN and Julian SCHWINGER, who worked on the same subject independently of Tomonaga.

Tompson, Thomas (1639–1713), British horologist. He raised the art of clockmaking to a high level, regarding the movement as more important than the exterior casing. There are examples of Tompion's art at Hampton Court and in many British museums and country houses.

Tom Sawyer, The Adventures of (1876), autobiographical novel by Mark TWAIN concerning the adventures of a young boy in a small Missouri town. Its sequel, *Huckleberry Finn*, proved an equal success. They were followed by *Tom Sawyer Abroad* (1894) and *Tom Sawyer, Detective* (1896).

Tom Thumb (1838–83), US entertainer, real name Charles S. Stratton. He was a midget made famous by the showman P. T. BARNUM, who took him to New York in 1842 and billed him as "General Tom Thumb". Tom Thumb's height never exceeded 102cm (40in).

Tonbridge and Malling, county district in

W central KENT, England, created in 1974 under the Local Government Act (1972). Area: 240sq km (93sq miles). Pop. (1974 est.) 94,800.

Tone, Theobald Wolfe (1768–98), Irish revolutionary leader. Tone, who wanted the Irish to sink religious differences and unite for political independence, founded the United Irishmen in 1791, and promoted the Catholic Relief Act in 1793. After visiting America in 1795, Tone masterminded an abortive French invasion of Ireland in 1796. He committed suicide after being captured in 1798.

Tone languages, languages that use the pitch of the voice as a major device in giving meaning or indicating grammatical relationships. For example, in Chinese a syllable that is transliterated as *ma* means "mother" when spoken on a high tone, "hemp" on a mid-rising tone, "scold" on a high-falling tone and "horse" on a falling-rising tone. See also p.1878.

Tonga, island kingdom in the SW Pacific Ocean, approx. 2,200km (1,370 miles) NE of New Zealand. Formerly the British protectorate of the Friendly Islands, it is made up of approx. 150 islands. Coconuts and bananas are the chief crops and fishing is the most important industry. The capital is Nuku'alofa. Area: 699sq km (270sq miles). Pop. (1976) 90,128. See also p.2150.

Tongking. See TONKIN.

Tongue, muscular organ that moves food in the mouth during chewing and to the back of the mouth for swallowing, and functions in speech. The tongue contains the taste buds, groups of cells that distinguish the four basic tastes: bitter, tasted on the back of the tongue; sweet and salty, tasted on the tip and front of the tongue; and sour, tasted mainly on the sides of the tongue. See also SENSES; pp.160–161.

Tonic sol-fa, system of MUSICAL NOTATION designed to train the ear and voice in correct intonation. The system is the same for every DIATONIC scale, the notes being represented in their relationship to the tonic or keynote (*doh*). The notes are given as syllables (*doh, re, me, fa, soh, la, te*, etc.) and rhythm and accents are indicated by colons and dashes. It was developed in c.1850 by John CURWEN.

Tonkin (Tongking), large area of N Vietnam. A former French protectorate, it borders China (N), the Gulf of Tonkin (E), the Annam region (S) and Laos (S and W). It was conquered and ruled by the Chinese from 111 BC to AD 939, later becoming an independent kingdom. It was the seat of the Northern rule of Vietnam after 1558, and became part of the union of Indochina in 1887. Tonkin was occupied in WWII by the Japanese and was the scene of a post-war demand for independence from the French, who were finally defeated in 1954. Area: approx. 103,600sq km (40,000sq miles).

Tonkin, Gulf of, shallow arm of the South China Sea bounded by the E coast of North Vietnam, the S coast of China, and Hainan island. The chief ports are Haiphong (Vietnam) and Peihai (China). Length: 500km (300 miles). Width: 240km (150 miles).

Tonnage, in marine engineering, term used to define the size or capacity of a ship. The displacement tonnage is the weight of the volume of water that a ship displaces: it is a measure of the size of the ship. The gross tonnage is the displacement tonnage of a ship and its cargo. The dead-weight tonnage is the difference of the gross and the displacement tonnages. Tonnage is expressed in volumetric tons, 2.83cu m (100cu ft).

Tönnies, Ferdinand Julius (1855–1936), German sociologist and political scientist. He developed the concepts of *Gemeinschaft* (organic community) and *Gesellschaft* (societal associations), which have been useful in analyzing the development of Western society since the INDUSTRIAL REVOLUTION. See also p.1840.

Tonsberg, city in SE Norway, on the Skagerrak. Founded c.870, Tonsberg is one of the oldest cities in Norway. It is a major shipping and whaling centre. Pop. (1971) 11,200.

Tonsillectomy. See TONSILLITIS.

Tonsillitis, acute or chronic inflammation of the tonsils, often caused by a STREPTOCOCCUS infection. Tissues surrounding the tonsils frequently form pus during acute attacks, in which white specks or a white exudate may be seen on the surface of the enlarged glands. Chronic tonsillitis is often treated by surgical removal of the TONSILS (tonsillectomy). See also p.1064.

Tonsils, two masses of lymphatic glandular tissue located at the back of the throat, between arch-like folds of membrane (faucets). They have a pitted surface that frequently becomes infected (tonsillitis). See also p.1064.

Tonsure, shaving of the head as a sign of pious humility or clerical status. From medieval times in the Christian Churches, the Roman (St Peter's) tonsure left a fringe or a ring of hair to represent the crown of thorns; in the Eastern Churches' (St Paul's) tonsure, the head was entirely shaved.

Tonti (or Tonty), Henri de (1650–1704), Italian explorer of North America. He accompanied LA SALLE to Canada in 1678 and explored the GREAT LAKES. He travelled with La Salle to the mouth of the MISSISSIPPI, where they claimed the Mississippi Basin for France, naming it Louisiana.

Tonton Macoutes, personal police force of Haitian dictator, FRANÇOIS "PAPA DOC" DUVALIER, who empowered them to torture, kill, and terrorize. Their eyes were hidden by dark glasses, presumably to suggest they were zombies, thus invincible. The name is Haitian French for "bogeymen".

Tools, in archaeology, objects used by early man to assist him to shape his environment. The sophistication of the tools is a criterion used by archaeologists to date and evaluate early remains. The first tools were probably unshaped stones, sticks or bones. The techniques used for sharpening flints, in particular, are used to distinguish early cultures. Other important early inventions include fire and the wheel (invented c.3500 BC) but many cultures managed huge engineering works without the wheel. Metal was originally introduced for ornament, with copper the first metal discovered c.6000 BC. See also pp.386–7, 390–393, 1159, 1174.

Tools, machine. See MACHINE TOOLS.

Tooth. See TEETH.

Toothache, pain in a tooth or surrounding tissues caused by nerve irritation, infection or decay. Treatment varies but cleaning and filling of cavities is a standard procedure. See also p.1100–1101.

Tooth shell, or scaphopod, any of several hundred species of marine molluscs that have a tubular, toothlike shell open at both ends. It burrows into sand with a foot at the wider end, and has small tentacles to gather tiny organisms for food. The sexes are separated and fertilization is external. Length: 13–130mm (0.4–5in). Class Scaphopoda. See also p.25.

Topaz, transparent, glassy mineral, aluminium fluosilicate, $Al_2SiO_5(F,OH)_2$, found in pegmatites. Its crystals are orthorhombic system columnar prisms; it occurs as granular masses. Topaz is colourless, white, blue or yellow; some large crystals are of gem quality. Hardness 8; s.g. 3.5.

Tope, small shark that lives in British waters and is fished for food and sport. It has a grey-brown body and is often found in schools, or near the bottom where it feeds on small fish. Length: to 2m (6.5ft). Family Carcharinidae; species *Galeorhinus galeus*.

Tope, in Buddhist architecture, another name for a dagoba or STUPA. The tope was a burial mound containing relics and usually domed or beehive in shape.

Topeka, state capital of Kansas, USA, on the Kansas River, 90km (55 miles) W of Kansas City. It was founded in 1854 by settlers from New England, and became the state capital in 1861. The Menninger Clinic, world famous for its psychiatric research and treatment of mental illness, is in the city. Topeka is a major shipping centre for cattle and wheat. Industries: food processing, printing and publishing, rubber goods, footwear. Pop. (1980) 115,996.

Topiary

Torah, constituting God's revelation to Israel, is preserved on parchment scrolls.

Toronto, Canada's second largest city, is a financial and commercial centre.

Torricelli, Galileo's assistant, was the first man to create a sustained vacuum.

Tortoises carry a bony "shell", which is actually their ribs and backbone.

Topiary, practice of trimming densely-leaved evergreen shrubs and trees into decorative artificial shapes; it was once popular in English and French formal gardens. The best results are obtained with cypress, yew, box and holly.

Topkapi Searayi, or Topkapi Palace, seraglio built by Sultan MEHMET II in Istanbul and completed 1478. Situated on a promontory overlooking the Bosphorus, it was the sultan's residence until the 19th century.

Topography, study of surface features such as hills, valleys, rivers, roads and lakes. It is also the representation of such features on a relief map or a plan for construction. The terrain of a region is explored using surveyors' instruments or aerial PHOTOGRAMMETRY (plotting elevations from photographs). See also SURVEYING; pp.242-243.

Topology, branch of mathematics concerned with those properties of geometric figures that remain unchanged after a continuous deformation process such as squeezing, stretching, or twisting (but not tearing or breaking). The number of boundaries of a surface is such a property. All plane closed curves (ie any line that eventually comes back to its beginning, all on a single plane) is topologically equivalent to a circle; a cube, a solid cone and a solid cylinder are topologically equivalent to a sphere. These figures can be considered sets of points, each point of one set being transformable into one point in another set. See also pp.802-803.

Topolski, Feliks (1907-), British draughtsman and illustrator, b. Poland. He settled in England in 1935 and during WWII he was a war artist, both in England and abroad. He was commissioned to paint *Cavalcade of the Commonwealth for the Festival of Britain* (1951).

Torah, meaning "teaching", Hebrew name for the PENTATEUCH, the first five books of the Old Testament. By tradition the authorship is ascribed to MOSES, although at least one of the five was written around the time of the BABYLONIAN CAPTIVITY (586 BC). In the synagogue the Torah is kept in the Ark, being removed only to be read during Sabbath services. Torah is also used as a term to describe the complete Jewish Bible and all the laws and customs of Judaism.

Torbay, county district in s Devon England, created in 1974 under the Local Government Act (1972). Area: 63sq km (24sq miles). Pop. (1979 est.) 108,700.

Torch, small portable electric lamp powered by DRY CELL batteries or, rarely, by a portable generator. The first dry-cell torch was made in 1898.

Tordesillas, Treaty of, agreement signed in 1494 by Spain and Portugal in which the newly explored lands were divided into two spheres of influence. The dividing line from pole to pole passed 370 leagues w of the Cape Verde Islands; Spain's portion was all the area to the w of this line. The agreement meant that Brazil, still undiscovered, would be claimed by Portugal. See also p.1371.

Torelli, Giacomo (1608-78), Italian architect and stage designer who played an important part in the development of stage machinery for the speedy change of heavy sets. In 1640 he designed the Teatro Novissimo in Venice and in 1645 went to Paris, where he was instrumental in the development of spectacle plays.

Torelli, Giuseppe (1658-1709), Italian composer and violinist. He is credited with the origination of the concerto for more than one instrument (his were for two violins), although the attribution to him therefore of the CONCERTO GROSSO form is now considered inaccurate.

Tori Busschi (fl. early 7th century), the first great Japanese sculptor. His reputation rests on the gilt bronze triad of Shaka Nyorai (c.623).

Torino. See TURIN.

Tornado, also called twister, funnel-shaped, violently rotating storm extending downwards from the cumulonimbus cloud from which it forms. At the ground its diameter may be only about 100 metres. Rotational wind speeds range from 160 to 480km/h (100 to 300mph) at the centre.

Tornadoes occur in deep low pressure areas, associated with FRONTS or other instabilities occurring particularly in the Eastern States of the USA. See also pp.248-249.

Toronto, port in s Ontario, Canada, 580km (360 miles) w of Montreal on the N shore of Lake Ontario; capital of Ontario province, and second largest city in Canada. The site was first visited in 1615 by the French explorer Étienne Brulé. A French fur-trading post, Fort Rouille, was established, followed by a fort in 1749 which was burned in 1759 to prevent capture by the British. In 1787 British Loyalists purchased from the Indians land on which a French fort named Toronto had been sited, and the settlement of York was founded in 1793 as the new capital of UPPER CANADA. During the WAR of 1812 the city was captured twice by US troops. The city was re-named Toronto in 1834, serving again as the capital of Upper Canada in 1849 and becoming the provincial capital of Ontario in 1867. Today places of interest include Exhibition Park, the Art Gallery of Ontario, the Conservatory of Music and the Royal Ontario Museum. Educational institutions include the University of Toronto (1827) and the University of Trinity College (1852). Exports: grain, livestock, meat. Industries: electrical equipment, brewing, printing, publishing, iron and steel, food processing, chemicals, motor vehicles, aircraft and farm machinery. Pop. (1976) 633,318. See also p.2000.

Torpedo, self-propelled underwater missile used by submarines, small surface warships and aircraft to destroy enemy vessels. Modern torpedoes may be launched by rocket boosters and often have internal electronic equipment for guiding the missile to the target. See also p.478.

Torpedo boat, small, inexpensive, fast coastal naval craft armed with torpedoes and, recently, with antiship guided missiles. Torpedo boats are generally used to defend or attack coastal shipping and installations, and to conduct hit-and-run attacks against larger warships. See also pp.568-569, 568.

Torpedo ray, or electric ray, flat-bodied fish found in all tropical and temperate marine waters from shallow depths to 1,000m (3,300ft). It has wing-like fins at the sides of the head and there are electric organs on each side of the head. Length: 1.5m (5ft). Families Torpedinidae, Narkidae and Termeridae. See also CHONDRICHTHYES; RAY.

Torquay, popular resort town of TORBAY on the s coast of Devon, SW England.

Torque, in art and archaeology, opened ring of gold or bronze worn as a neck decoration or bracelet. Most examples have a twisted pattern, often with animal heads on the ends. See also p.1220.

Torque, in physics, VECTOR quantity describing the rotational force about an axis. A force F applied at a distance r from an axis of rotation produces a torque $\tau = rF$. The output of a rotary engine, such as the familiar 4-stroke engine, or an electric motor is rated by the torque which it can develop. See also MOMENT.

Torquemada, Tomás de (1420-1498), Spanish churchman and grand inquisitor. A DOMINICAN priest and confessor to FERDINAND II and ISABELLA I, he was appointed (1483) head of the Spanish INQUISITION. He became noted for the severity of his judgements and the harshness of his punishments and it was he who was chiefly responsible for the expulsion of the Jews from Spain in 1492.

Torrens, William Torrens McCullagh (1813-1894), British social reformer. Elected as an independent Liberal MP in 1835, he was influential in the passing of the Artisans' Dwellings Act (1868), relating to slum clearance, and the Education Act (1870), which established the London School Board.

Torres Restrepo, Camilo (1929-66), Roman Catholic priest from Colombia. He adopted Marxist views while studying in Belgium and joined guerrillas in Colombia, but was killed by government forces. **Torres Naharro, Bartolomé de**

(d.c.1524), Spanish poet and playwright. After periods as a soldier and a priest, he was captured by the Moors, but survived to write much varied drama, including *Himeneo*, a play about honour, and *Serafina*, a comedy.

Torres Strait, channel between Cape York Peninsula, Australia and New Guinea, connecting the Arafura and Coral seas. Numerous reefs make the channel dangerous to shipping. Width: 153km (95 miles).

Torrey Canyon, name of a supertanker carrying crude oil from Kuwait which ran aground off Lands End, Cornwall, in 1967. Nearly 100,000 tonnes of oil escaped, polluting the beaches of SW England, the Channel Islands and France. Thousands of seabirds died and the detergent used to combat the oil destroyed more marine life. See also pp.762, 762.

Torricelli, Evangelista (1608-47), Italian physicist. Assistant and secretary to GALILEO during the latter's last three months of life, he is credited with the first man-made VACUUM (the Torricellian vacuum) and in 1643 invented the BAROMETER. He also constructed a primitive microscope and improved the telescope. His work in geometry eventually contributed to the development of INTEGRAL CALCULUS.

Torrid zone, or tropics, region of the Earth between the TROPIC of CANCER and the TROPIC of CAPRICORN. The Sun is vertical at noon over every point within the tropics on at least one day of the year.

Torrigiano, Pietro (1472-1528), Italian sculptor of the school of FLORENCE. Having incurred the wrath of all Florence for breaking MICHELANGELO's nose, he went to England in 1511; his gilt bronze masterpiece, the tomb of King Henry VII and Elizabeth of York, is preserved in WESTMINSTER ABBEY.

Torsion, in mechanics, strain in material that is subjected to a twisting force. In a rod or shaft, such as an engine drive shaft, the torsion angle of twist is inversely proportional to the fourth power of the rod diameter multiplied by the shear modulus (a constant) of the material. Torsion bars are used in the spring mechanism of some motor car suspensions.

Torsion balance, sensitive device for measuring small forces, whether gravitational, magnetic or electrical. Torsion is the state of strain, set up in a material when it is twisted, which tends to restore it to its original position. A torsion balance has a horizontal arm, suspended at its centre by a fine wire or fibre, which is deflected sideways by the force being measured.

Tort, in British law, wrongful act or omission which can give rise to a civil action at law, other than concerning breach of contract. The law of tort includes negligence, libel, slander, trespass, false imprisonment and nuisance.

Tortelier, Paul (1914-), French cellist and composer. His career as one of the world's leading solo cellists began in 1947. His compositions are chiefly for the cello, but he has also written a piano concerto, a violin concerto and a symphony.

Tortoise, terrestrial or freshwater reptile of the order Chelononia. American usage favours the name TURTLE, reserving "tortoise" for land-living Chelonians of the family Testudinidae. All tortoises are heavily armoured with a high, domed, bony, box-like structure commonly called its "shell". When disturbed, tortoises pull their scaly legs, head and tail into the shelter of the shell. They live in tropical and subtropical regions, and hibernate in temperate countries. They are slow movers, feed almost entirely on plants and live to a great age. Length: usually to 30cm (1ft). A giant species, up to 1.9m (5ft) long, lives in the Galápagos Islands and some Indian Ocean islands. See also pp.69-70, 186-187, 317.

Tortoise-shell butterfly, any of a widespread group of medium sized butterflies native to Europe and temperate regions of Asia. Their wings have tortoise-shell-like markings of orange, black, brown and yellow. Family Nymphalidae.

Tortoise-shell cat, domestic cat with characteristic coloration of black, red and cream in irregular clearly-defined patches; the coat may be short or long. The eyes are generally copper or orange. Most tortoise-shell cats are female; males are usually sterile.

Torture, infliction of pain on a person to extract information, a confession or to indulge sadistic inclinations. It has been practised in many cultures and in some, notably medieval Europe and China, its refinements have reached the level of artistry. Until the 18th century it was considered a legitimate means of extracting a legal confession to a crime. The widespread use of torture for judicial purposes declined in the 18th century under the influence of ENLIGHTENMENT thinking; the 1949 GENEVA CONVENTION included a clause against torture, both of prisoners of war and of civilians of any country. Despite this, torture has continued in the 20th century. There has been increasing recognition of "psychological torture", in which disorientation, fear and loss of sleep and self-respect are used instead of or in addition to the simple application of physical pain. Organizations such as Amnesty International campaign vigorously against such methods.

Tory, Geoffroi (c. 1480–c. 1533), French printer and typographer. He is noted for his border design in several *Books of Hours* and for encouraging the departure in France from the use of Gothic to that of Roman letters. He wrote the first known work on type design, *Champfleur* (1529).

Tory Party, former political party in Britain. The term is still used as a nickname for the CONSERVATIVE PARTY, of which it was the forerunner. The word Tory comes from the Irish *toiridhe* (plunderer), which was applied to Irish Catholic bandits and was used as a term of abuse for supporters of JAMES II in the 1680s. During the regrouping which took place in English politics after the GLORIOUS REVOLUTION, a Tory Party based on support for the Anglican Church and opposition to continental entanglements became an important parliamentary force. After 1715, however, traditional Tory support for the STUARTS led the party to be eclipsed by the HANOVERIAN SUCCESSION, and Toryism became a backwater creed. It re-emerged in the 1790s when opponents of the French Revolution rallied round PITT's government. Tory administrations associated with anti-Catholicism, opposition to parliamentary reform and defence of the CORN LAWS dominated British politics until 1830. After the electoral reform in 1832, members of the Tory Party began forming Conservative associations, and Sir Robert PEEL headed the first Conservative administration in 1834. See also pp. 1426, 1427, 1446, 1447, 1544, 1549.

Tosca (1900), three-act opera by Giacomo PUCCINI with libretto by Giuseppe Giacosa and Luigi Illica.

Toscanini, Arturo (1867–1957), Italian conductor who became conductor at LA SCALA, Milan in 1898. He conducted the New York Philharmonic Orchestra from 1928 to 1936 and the NBC Symphony, which he formed in New York in 1937. He also worked at the Bayreuth, Salzburg and Lucerne festivals during the 1930s. He instilled his orchestras with remarkable energy and penetrated works with intense emotionalism and musical subtlety.

Toson, Shimazaki. See SHIMAZAKI, TOSON.
Tostig (d. 1066), Earl of Northumbria, Anglo-Saxon nobleman, the son of GODWIN. After Tostig provoked a revolt in Northumbria in 1065, his brother, King HAROLD, replaced him with Earl Morcar. Tostig went into exile, but returned in 1066 with the Norwegian King HARALD HARDRADE. Their invasion was defeated and they were slain at the battle of STAMFORD BRIDGE. See also p. 1300.

Total internal reflection, reflection without refraction of light at a boundary. When light passes from a dense medium, such as glass, to a less dense medium, such as water or air, a range of angles of incidence exists in which no light passes through the boundary; all the light is reflected within the denser medium.

Totalitarianism, form of government in which the state tries to acquire total control of every aspect of social and individual activity or thought, by means of controlling the mass media, suppression of opposition and the often violent use of the police. The term arose in the 1920s to describe FASCIST Italy and has since been applied to NAZI Germany, Stalinist Russia and many other police states. It is not always easy to draw a distinction between totalitarian and "democratic" or "plurist" societies – totalitarian state systems are rarely as monolithic as they seem and even liberal democratic societies have a monopoly of police and military power, and can have an effective control of the mass media. See also p. 1855.

Tote, or totalizer, automatic machine for laying bets, usually on horse or dog races. It divides its takings among the winning ticket-holders, the racing industry and any betting tax.

Totemism, ideas held by certain primitive societies about the relationships of KINSHIP between men and the animals or plants known as totems. Social groups may be distinguished by the totem with which they identify. Members of a totem group are prohibited from marrying others of the same group and from killing or eating their totem. Elaborate, often secret, rituals form an important part of totemistic behaviour. The totem may also be regarded by an individual as his spiritual protector, or as the guardian of his soul.

Totem pole, carved and painted wooden column erected by the Indians of the Pacific Coast of the USA and Canada. They are carved with stylized representations of real and mythical animals and men. Their function is closer to that of heraldic crests than of religious symbols. They are usually erected as roof supports; as doorways; as symbols of greeting; or as mortuary poles or grave-markers. See also p. 1911.

Totonac, tribe of Mexican Indians who gave their name to a distinct language family. They occupied Puebla and Veracruz as early as AD 100. Their descendants, numbering more than 130,000, still inhabit Veracruz, Puebla and Hidalgo.

Toucan, any of 35 species of colourful, gregarious birds of the forests of tropical America characterized by a large, colourful bill. The plumage is generally red, yellow, blue, black or orange. It lays one to four eggs that are incubated by both parents, and it feeds on fruit and berries. Length: 60cm (2ft). Family Ramphastidae. See also pp. 81, 314.

Touch, principal skin sense, occurs when the skin is mechanically deformed (moved). In addition to free nerve endings, the skin of higher vertebrates also has special cell receptors, PACINIAN CORPUSCLES, which are particularly prevalent around muscles and joints. Touch probably interacts with the kinaesthetic sense to produce sensations about body position; the illusion of touch may persist even in a limb that has been amputated. See also p. 140.

Toulon, port in SE France, on the Mediterranean sea, 48km (30 miles) ESE of Marseilles; the principal naval base of France. The city was a Roman naval station in the 3rd century. It passed to France in 1481. Industries: tourism, fishing, shipbuilding, chemicals. Pop. 181,600.

Toulouse, city in S France, on the River Garonne 214km (133 miles) ESE of Bordeaux; capital of Haute-Garonne département. Canals connect the city to the Mediterranean Sea and the Atlantic Ocean. The capital of the Visigoths in the 5th century, Toulouse became part of the French crown lands in 1271. The University of Toulouse dates from 1230. The city is the centre of the French aeronautic industry; other industries include paper, textiles, fertilizers and ammunition. Pop. (1975) 383,176.

Toulouse-Lautrec, Henri Marie Raymond de (1864–1901), French painter and graphic artist. Profoundly influenced by DEGAS and Japanese prints, his paintings and posters depict his fascination for the spontaneity of circus, theatre and cabaret life. He worked mainly in thinned oil paint, and occasionally in watercolour

or pastel. *Salon in the Rue des Moulins* (1894) exemplifies his style.

Touraco, or turaco, inquisitive, agile, cuckoo-like bird of SE Africa, known for its special feather pigments. Forest-dwelling touracos, with red wings resulting from the turacin pigment and green plumage due to turacoverdin, are typified by the Hartlaub's touraco (*Tauraco hartlaubi*): length: 35cm (14in). Bushland-dwelling touracos are typified by the grey plantain-eater (*Crinifer africanus*). Family Musophagidae.

Tour de France, the premier professional road cycling race in Europe. Raced over three weeks from the end of June, it travels over flat and mountainous country in a series of stages, beginning at Limoges and circling France until it ends in Paris. Since 1971 it has been limited to 20 stages averaging no more than 200km (124 miles) each. During the race the famous yellow jersey is worn by the overall leader.

Touré, Sékou (1922–), African political leader and first President of Guinea. An active trade union leader and nationalist, he led Guinea's campaign for independence from France and became president in 1958.

Tourel, Jennie (1910–74), French-Canadian mezzo-soprano who studied in Paris and made her début there in Georges BIZET's *Carmen* in 1933. She sang at the Metropolitan Opera, New York in 1937 and from 1943 to 1947.

Tourmaline, silicate mineral, sodium or calcium aluminium borosilicate, found in IGNEOUS and METAMORPHIC ROCKS. Its crystals are hexagonal system and glassy, either opaque or transparent. In colour tourmaline may be either black, red, green, brown or blue. Hardness 7.5; s.g. 3.1. Some crystals are prized as gems.

Tournament, medieval festival at which knights exhibited the martial arts in various sports, chiefly jousting and tilting. It was an element of feudal chivalry and the weapons were usually blunted. A revival, the Eglinton Tournament, was held at Eglinton Castle, Scotland, in 1839. The British armed forces stage a Royal Tournament each summer in London.

Tourneur, Cyril (c. 1575–1626), English playwright and poet. Little is known about him but his poetical works include *The Transformed Metamorphosis* (1600). Best remembered as a dramatist, his *The Atheist's Tragedy; or The Honest Man's Revenge* was published in 1611.

Tourniquet, device that controls haemorrhage by exerting pressure on an artery usually in the form of a band or strap fastened tightly around a limb, thus preventing the blood from flowing.

Tours, city in W central France on the River Loire, 208km (129 miles) SW of Paris; capital of Indre-et-Loire département. It was the seat of the French government in 1870 during the siege of Paris. A wine market, Tours has tourist, food processing and pharmaceutical industries. Pop. (1975) 145,441.

Toussaint l'Ouverture, Pierre Dominique (c. 1744–1803), Haitian independence leader. He joined the Negro rebellion in 1791 to free the slaves, drove the British and Spaniards from the island and by 1800 controlled all of HISPANIOLA. When NAPOLEON sent troops to re-establish French authority, Toussaint was captured and died in prison in France.

Tovey, Sir Donald Francis (1875–1940), British pianist, composer and music scholar. He is famous chiefly for his musical criticism, including the six-volume *Essays in Musical Analysis* (published 1935–39).

Tower Bridge, cantilever bridge over the River Thames in London, built by Sir Horace Jones between 1886 and 1894. The bridge has twin Gothic towers and a double-leaf bascule mechanism which opens to provide a 76m (250ft) gap. See also p. 534.

Tower of Babel. See BABEL, TOWER OF.

Tower of London, fortress on the N bank of the River Thames in London. The original keep, or White Tower, was begun by William the Conqueror in 1078 on the site of British and Roman fortifications. Richard I added concentric CURTAIN

Arturo Toscanini takes the baton to conduct the orchestra of La Scala, Milan.

Toucans, with their huge, colourful bills, are playful and make delightful pets.

Tournament at Eglinton Castle, Scotland, where the medieval festival was revived.

Tower of London was the scene of many macabre incidents throughout history.

Tower of Winds

Arnold J. Toynbee's scholarship is evident in his history of 26 civilizations.

Tracery was used to create designs which provided attractively adorned openings.

Tractors are among the modern "work horses" for various farming jobs.

Spencer Tracy's rugged features suited his title role in *The Old Man and the Sea*.

WALLS with towers at intervals; later monarchs augmented the building. The Tower, which once housed the Royal Mint was for centuries a royal residence and a prison for state offenders. The Tower is now a barracks and an armoury, and houses the British crown jewels. It is still guarded by "Beefeaters" (Yeomen of the Guard) in traditional Tudor uniform.

Tower of Winds, octagonal tower in Athens built c. 100–50 BC by Andronicus of Cyrrhus to measure time. The tower has sundials on its sides and once had a water-clock inside based on a design by Ctesibius. The tower, built of marble, is 12.8m (42ft) high and 7.9m (26ft) in diameter. See also p.1217.

Town, Harold Baring (1924–), Canadian painter and printmaker. He is known for his abstractions, in which primitivist shapes are elaborately contrasted.

Town, urban community larger than a village and with a significant proportion of inhabitants whose livelihood is not directly derived from the land. Town life is based first on a local market-place, and then on longer distance trade. Towns were first found in ancient SUMER, and they were the focus of civilization until the fall of the Roman Empire. Town life began to revive in the Low Countries in the 9th century, but in England the decisive development that encouraged large towns was the Norman Conquest of 1066. Throughout the Middle Ages towns were the centre of political organization and unrest; many boroughs achieved a degree of independence and their populace, particularly in London, could wield significant political power. The Industrial Revolution caused a major increase in the size and number of towns; and in the 19th century the first attempt was made in Britain to regulate the size and conditions of towns nationally. The Artisans Dwelling Act (1875) gave local authorities the power to clear slums. **TOWN PLANNING**, a well-known art in the Renaissance, was reintroduced in Britain in the 1880s and the post-war period has seen the development of new towns and the rebuilding of many old ones. About 30 new towns were developed in Britain between 1946 and the early 1980s.

Towne, Francis (1739–1816). British watercolour painter. He was esteemed for the spacious simplicity of his designs, and his art was the high point of the 18th-century tinted drawing style of English watercolour painting. The *Source of the Arveiron* is a fine example of his work.

Townes, Charles Hard (1915–), US physicist. He invented the MASER for which he shared the Nobel Prize in physics in 1964 with Alexander PROKHOROV and Nikolai BASOV. The MICHELSON-MORLEY EXPERIMENT was accurately confirmed with the aid of masers.

Town Planning, arrangement of urban centres to provide healthy living conditions, efficient transport and communications, public facilities and aesthetic surroundings. The ancient cities of Babylon and Nineveh were planned around a central citadel and palace in the plan of a grid-iron. The monumental approach of the Renaissance gave long and wide avenues. In Britain in the 20th century, total town planning has given rise to the GARDEN CITIES.

Townshend, Charles, 2nd Viscount (1674–1738), English politician known as "Turnip Townshend". Townshend, a Whig, was Robert WALPOLE's brother-in-law, and was Secretary of State for the northern department (1714–17, 1721–30). He was responsible for forming the League of Hanover in 1725. Thwarted in his aggressive policy against Austria, he resigned in 1730 and devoted his retirement to agricultural improvements. See also p.1464.

Townshend Acts (1767), series of taxes levied on the American colonies by the British Parliament. The Chancellor of the Exchequer, Charles Townshend, introduced them to provide revenue to defray the cost of the colonial government. They taxed numerous imports, including glass, paper, lead, tea and paint. The taxes were so vehemently opposed by the colonists

that all were repealed, except that on tea (1770).

Towton Field, near York, site of a battle (1461) in the Wars of the ROSES in which the House of YORK under EDWARD IV defeated the House of LANCASTER.

Toxaemia, condition resulting from the presence of poisons in the blood. It is usually due to bacterial infection at a local site, such as an abscess, but inadequate excretion due to a defective kidney may also cause toxaemia.

Toxicology, the study of poisons and their effects. It has become an important science with the growth of modern industry, many of whose products, although essential for industry, agriculture or medicine, are toxic. Toxicological testing of new products is now indispensable, both within the laboratories of producing industries and in government and other monitoring laboratories.

Toxin, poisonous substance, usually a product of certain plants, animals or BACTERIA. The organisms which cause DIPHTHERIA and TETANUS are examples of toxins. The controlled use of bacterial toxins as immunological agents has been effective in providing protection against those and other disorders. Antitoxins produced against diluted toxins are effective immediately against later infection.

Toxoid, bacterial TOXIN that has lost its virulence but can still stimulate the production of ANTIBODIES in response to infection. This is the basis of VACCINATION.

Toxoplasmosis, infection that occurs in many animals, including man, caused by micro-organisms of the genus *Toxoplasma*. Symptoms are generally mild in adults, but in a pregnant woman the parasite can be damaging to the central nervous system or to the eyes of her child.

Toy dog, any of numerous small breeds of dogs; many have been dwarfed from larger breeds. They range in size from the tiny CHIHUAHUA and MALTESE, to the larger POKINSE, TOY POODLE and PUG.

Toynbee, Arnold Joseph (1889–1975), British historian who worked for the British foreign office during WWI and WWII and was a delegate to the Paris Peace Conference in 1919. He is famous for *A Study of History* (12 vols, 1934–61), in which he emphasized the need to examine whole civilizations rather than individual nations.

Toyonobu, Ishikawa (1711–85), Japanese ukiyo-e painter and printmaker whose earliest works were a series of lacquer prints. His best works were portraits of women and actors, painted with sensitivity and grace.

Trabeate, architectural term for the use of beams in classical Greek building. The beams are horizontal, placed across columns and providing a flat, unvaulted ceiling or doorway.

Trace elements, chemical elements in the body which are essential to life but are needed only in small quantities, supplied in food. They include boron, cobalt, copper, manganese, molybdenum and zinc. They are essential to the reactions of ENZYMES and HORMONES. More generally, trace elements are those found in nature only in small quantities.

Tracer, radioactive, RADIOACTIVE ISOTOPE which, in medicine, is fed to or injected into a patient. Its course is followed in the body by the detection and identification of metabolic compounds "labelled" with the isotope. This technique may help in the diagnosis of disease. Radioactive tracers are used in a similar way to follow chemical reactions in complex organic industrial processes. See also p.1095.

Tracery, in Gothic architecture, ornamental subdivisions of arched openings, especially windows. Beginning with the simple plate tracery of the ROMANESQUE style, designs became increasingly ornate and the window area larger until the culmination of the style in the FLAMBOYANT tracery of the 15th century.

Trachea, or windpipe, tube that extends from the larynx to about the middle of the breastbone. It is lined with hair-like cilia that prevent dirt and other substances from entering the lungs. At its lower end the trachea splits into two branches, the

bronchi, which lead to the lungs. See also pp.158, 159.

Tracheophyte, any of the VASCULAR PLANTS, all of which are members of the phylum Tracheophyta. Within this phylum are the psilopsids, leafless, rootless primitive forms such as whisk ferns; sphenopsids, the HORSETAILS; lycopsids, the CLUB MOSSES; and pteropsids, the FERNS, GYMNASPERMS and flowering plants.

Tracheotomy, surgical procedure in which an incision is made through the skin into the TRACHEA (windpipe) to facilitate breathing or to give oxygen. The hole cut in the trachea is called a tracheostomy.

Trachoma, chronic, contagious CONJUNCTIVITIS, caused by the micro-organism *Chlamydia trachomatis*, characterized by inflammatory granulations on the conjunctival surfaces of the eye. In early stages it responds to treatment with sulphamide drugs. It is a major cause of blindness in Africa and Asia.

Tracking, in aerospace technology, following a moving object, usually with radar or radio using aerials that "lock" onto the object. The correct sweep speed of the aerials is calculated by computer from information of the object's position and velocity. Satellite tracking is of two kinds: active tracking uses radar to locate an object; passive tracking uses signals from the object itself.

Tractarianism. See OXFORD MOVEMENT.

Traction, in medicine, gradual exertion of a force on a part of the skeleton to overcome muscular contraction and so ensure proper alignment of a fractured bone. The force is exerted gradually over a period of time generally using weights on cords over pulleys.

Traction engine, large, heavy vehicle powered by steam, once used for drawing farm wagons and other heavy loads, but now obsolete. Traction engines were also used at funfairs and circuses to drive dynamos for electricity.

Tractor, four-wheeled or tracked machine designed to pull or push heavy implements over rough terrain. It is commonly used in agriculture, construction and industry. See also pp.459, 658, 658.

Tracy, Spencer (1900–67), US film actor. He appeared in nearly 80 films, of which nine, including *Adam's Rib* (1949), *Pat and Mike* (1957) and his last film, *Guess Who's Coming to Dinner* (1967), were made with his famous screen partner, Katharine HEPBURN.

Trade, Board of, former British government department. It evolved out of a series of committees appointed by the Privy Council in the 17th century to enquire into trade questions. Later committees were called Boards of Trade. By 1970 the Board of Trade was merged with the Ministry of Technology and it became the Department of Trade and Industry. In 1974 it re-emerged as a separate entity, the Department of Trade with its own Secretary of State.

Trade, international, the exchange of goods between countries. Modern international trade developed from the mercantile practices in Europe in the 16th and 17th centuries. Advocated by Adam SMITH as a means whereby nations could specialize in particular products, the growth of such trade paralleled the development of manufacturing and improved sea transport. The development of refrigerated cargo carriers in the late 19th century provided an important additional source of food for Britain from the colonies, thereby enabling it to diversify its manufacturing. Today international trade is complex and diverse with many bilateral and international agreements, such as GATT (General Agreements on Tariffs and Trade), with most countries attempting to sell their produce, obtain needed materials and at the same time protect home industries. See also pp.1866–1869.

Trade barriers, methods a country uses to discourage the importing of goods. Trade barriers include TARIFFS, quotas and absolute bans against importing of certain types of goods. Customs regulations may be so complicated as to constitute an informal trade barrier. Trade barriers are used to protect special industrial interests or the

national economic interest of a state or a country.

Trade mark, distinguishing mark such as a name, symbol or word, attached to goods by a manufacturer to identify them as made or sold by him. A trade mark must be registered at the PATENT Office, which establishes exclusive right to it. It became important during the INDUSTRIAL REVOLUTION as a means of differentiating between brands of similar products.

Tradescant, name of two British botanists and travellers, father and son, who both became gardeners to Charles I. John (d. 1638) travelled to Russia and Algeria gathering plants, among them the "Alger Apocrot", and established a garden of exotic plants, at his Lambeth home. His son, also named John (1608-62), travelled to Virginia for plants for the Lambeth garden. He wrote a book about the Lambeth collection, *Musaeum Tradescantianum* (1656). Their collection, transferred to Oxford after their deaths, formed the nucleus of the Ashmolean Museum.

Trades Unions Congress. See TUC.

Trade Unions, groups of workers organized for the purpose of improving wages and conditions of work. The first trade unions were founded in Britain. Although some craft and agricultural unions developed before industrialization, the growth of trade unionism paralleled the growth of industry, particularly manufacturing. Originally illegal because of their subversive element, trade unions were given restricted legality in Britain in 1825, although their precarious status was illustrated by the conviction of the TOLPUDDLE MARTYRS in 1834. The Trades Union Act (1871) put the unions on a firm legal basis. Legislative provisions affecting unions in Britain are incorporated in the Industrial Relations Act (1971), which provides for the registration of trade unions. See also pp.1569-1571, 1650, 1692-1695, 1720, 1853, 1853.

Trade winds, steady winds that blow westwards towards the equator from sub-tropical high pressure zones between 30°N and 30°S.

Trading stamps. See STAMPS, TRADING.

Trafalgar, Battle of (1805), naval engagement in the Napoleonic Wars fought off Cape Trafalgar, Spain. NELSON, the British admiral, divided his 27 ships into two squadrons and broke the Franco-Spanish line of 33 ships under Admiral de Villeneuve. Nelson, on board HMS Victory, was killed, but the battle established British naval supremacy in the 19th century. See also pp.1552, 1552, 1554, 1555.

Traffic control, regulation of the movement of vehicles and pedestrians, especially in cities. At busy crossings traffic lights are used with separate phases for pedestrians and each direction of traffic flow. These lights may be operated by sensitive pads in the road triggered by passing vehicles, pedestrians signalling, by police control of the lights or by computers. Computer control enables traffic volumes along busy roads to be regulated by the automatic allocation of time for each phase of the flow.

Trafford, county district in central S GREATER MANCHESTER, England; created in 1974 under the Local Government Act (1972). Area: 106sq km (41sq miles). Pop. (1979 est.) 224,000.

Tragedy, form of DRAMA in which a noble hero (the protagonist) meets a fate inherent in the drama's action. *Oedipus Rex* by SOPHOCLES is an early example, which was unmatched until the tragedies of Christopher MARLOWE. ARISTOTLE'S *Poetics* systematized tragedy and introduced such ideas as *anagnorisis* (recognition) and *catharsis* (the purging of pity and terror in the spectator).

Traherne, Thomas (1637-74), English writer, chiefly on religious subjects. He wrote a number of mystical poems and the prose works *Roman Forgeries* (1673), *Christian Ethics* (1675) and, what was to be the most famous of his works, *Centuries of Meditation*, which was not published until 1908.

Traini, Francesco (fl. 14th century), Italian painter who was greatly influenced by

the work of LORENZETTI and PISANO. Among his works is the altarpiece *Apotheosis of St Thomas Aquinas* (1363) in Sta Caterina, Pisa.

Trains. See RAILWAYS.

Trajan (c. AD 52-117), Roman emperor (r. 98-117) under whom the frontiers of the empire reached their greatest extent. He was born in Spain and was adopted by his predecessor NERVA; he was the first emperor from the provinces. Trajan maintained good relations with traditional Roman institutions such as the Senate. In campaigns of 101-102 and 105-106 he conquered Dacia, N of the Danube, and from 113 to 116 campaigned against the Parthians and added Mesopotamia to the empire. In later years his reign was seen as the summit of Roman power, but some authorities believe that his conquests strained the military resources of the empire. He was succeeded by HADRIAN. See also pp.1232, 1233.

Trajectory, path of a projectile. On Earth, and in the absence of air resistance, all trajectories would be portions of an ELLIPSE whose focus was at the centre of the Earth. Since this is 6,440km (4,000 miles) deep, and usually much greater than the height of the trajectory, the mathematically simpler PARABOLA provides a good approximation.

Trakl, Georg (1887-1914), Austrian poet, whose highly expressionist poetry was influenced by BAUDELAIRE and DOSTOEVSKY. See also p.1717.

Trampolining, pastime and competitive sport that involves the performance of acrobatic manoeuvres while bouncing on a tightly-sprung canvas springboard.

Trams, passenger carriages that run in streets, fixed to a single course on rails. They were introduced by John Mason in New York in 1832; they were at first pulled by horses, later being powered by steam locomotives or by means of electric overhead cables. In Britain after 1872 when they were first allowed to run by mechanical power, their popularity rose. After WWI they declined, to be replaced by motor buses and the trolleybus. The last tram ran in London in 1952, but many European cities still have a tramway system. See also p.500-501.

Tranquillizers, drugs used to quieten mental states characterized by anxiety, tension and mania (or hyperactivity). They are divided into two categories: the antipsychotic drugs, such as RESERPINE and other ALKALOIDS from *Rauwolfia serpentina*, chlorpromazine and its related phenothiazines; and the antineurotics, such as DIAZEPAN, chlorthalidoxepoxide and meprobamate. The antipsychotic drugs, in high doses, can produce serious side-effects. Some of the side-effects of phenothiazines include skin pigmentation, weight gain, sensitivity to light (photosensitivity), lactation and, in a few patients, reactions resembling PARKINSON'S DISEASE. Doctors are increasingly on guard against prescribing them without sound cause. See also p.1109.

Transatlantic cable, any submarine cable laid under the Atlantic Ocean and used to carry electrical signals. The first successful one was the telegraph cable laid in 1866. See also pp.635-636.

Transatlantic telephone, extension of the European and North American telephone systems to include a link across the Atlantic Ocean via submarine cables or satellite. A major obstacle to the development of long-distance telephone was the weakening of the signal because of the electrical resistance of the cable. Repeaters were developed and incorporated at regular distances into the cable to amplify the signals. The first multi-channel telephone cable was laid in 1956 between Scotland and Newfoundland. See also p.636-637.

Transcaucasia (Transcaucasian Federation, or Transcaucasian sr), former federated union of the USSR; now the three Soviet Socialist Republics of Armenia, Azerbaijan and Georgia. It was first formed in 1918 after the Russian Revolution but was soon divided into the three separate republics. In 1919-21 Turkish nationalists fought with the BOLSHEVIKS for control of this region; in 1922 it was re-

formed and entered the USSR in 1924. Georgia, Azerbaijan and Armenia were re-established as union republics in 1936.

Transcendentalism, school of philosophy which traced its origin to the idealism of Immanuel KANT. It was concerned not with objects, but with our mode of knowing objects. It spread from Germany to England, where Samuel COLERIDGE and Thomas CARLYLE came under its influence. In the mid-19th century it spread to the USA, where it was propagated by a literary circle based in Concord, Massachusetts, including Ralph EMERSON, Henry THOREAU, Amos Alcott and Margaret Fuller.

Transcendental meditation (TM), type of meditation taught by Maharishi Mahesh Yogi. TM decreases oxygen consumption and heart rate and increases skin resistance and alpha brain waves, yielding a relaxed mental state differing from sleep or hypnosis. See also pp.1918, 1919.

Transducer, device for converting any nonelectrical signal, such as sound or light, into an electrical signal, and vice versa. Examples are microphones, loudspeakers, gramophone pickups and various measuring instruments used in acoustics.

Transduction, in microbiology, natural process by which genetic material is transferred between one host CELL and another by a VIRUS.

Transept, in church architecture, the transverse section of a church at right-angles to the main axis. The north and south transepts are of the same height as the nave and are positioned immediately next to the choir or chancels.

Transfer orbit (transfer ellipse), path followed by a spacecraft while changing from one orbital path to another. The tangential ellipse is a tangent to the arrival and departure orbits and uses the least energy. Transfer ellipses intersecting the arrival and departure at higher angles use more energy but may be advantageous in other ways.

Transfer printing, in ceramics, a technique of decorating pieces involving an inked copper engraving that is printed onto paper; the print is applied to a glazed pottery surface while wet. The resulting offset monochrome image, which may then be coloured by hand, is fired into the glaze.

Transfer RNA. See RNA.

Transfiguration, New Testament occurrence involving the sudden physical transformation of Christ in the presence of St Peter, St James and St John, described, for example, in Matt.17:1-8. His face and garments became radiant, Elijah and Moses appeared, and God spoke from a cloud. This event revealed Christ's true divine nature and earthly mission.

Transfinite number, number denoting the size of an infinite set, its symbol is \aleph (the Hebrew letter aleph) with a subscript. \aleph_0 represents the set of all integers; \aleph_1 represents the set of all real numbers and is infinitely larger than \aleph_0 .

Transformer, device for converting alternating current at one voltage to another voltage at the same frequency. It consists of two coils of wire coupled together magnetically. The input current is fed to one coil (the primary), the output being taken from the other coil (the secondary). Large oil-cooled transformers are used in electricity transmission and small ones are employed in domestic appliances and electronic equipment. See also pp.444-445, 876.

Transform fault, special class of strike-slip fault characteristic of mid-ocean ridges. Because of the transform faults, the Mid-Atlantic Ridge does not run in a straight line but in offset steps. Some geologists think the four major structures of the Earth's crust are mountains, deep-sea trenches, mid-ocean ridges, and strike-slip faults and that they form continuous networks. See also p.198.

Transfusion, blood. See BLOOD TRANSFUSION.

Transhumance, seasonal moving of livestock from one region to another. Transhumance occurs in societies living in zones with extensive climatic changes such as in the mountainous terrain of the Arctic regions or desert of Central Africa, where

livestock cannot survive for the whole year because of cold, drought or flooding. See also p.723.

Transient Lunar Phenomena (TLP), surface or sub-surface activities on the Moon, possibly volcanic in origin. The sites of TLP are concentrated on the edges of the lunar seas and in regions rich in RILLES. See also pp.933, 933, 935.

Transients, in music acoustics, the momentary sounds which precede and follow a note played on a musical instrument. These sounds are important, particularly at the onset of the vibration, for the listener's recognition of an instrument. In a certain register, for instance, the sounds of the violin and oboe are very alike but can be distinguished because they have different transients (due to the action of the bow and reed respectively).

Transistor, semiconductor device which can amplify electrical signals. A semiconductor material, such as silicon or germanium, is "doped" with minute amounts of either phosphorus, arsenic or antimony to produce n-type material or with either aluminium, gallium or indium to give a p-type material. Joining together a piece of each gives a DIODE. Sandwiching one type between two of the other produces a transistor. These can thus be of two kinds: a p-n-p or n-p-n transistor. The middle region is known as the base, one of the side regions as the emitter and the other as the collector. In an n-p-n transistor the signal to be amplified is fed across the collector, maintained at a constant voltage with respect to the base. The amplified signal comes out across the base and the emitter. Transistors were first developed by John BARDEEN, Walter Brattain and William SHOCKLEY in 1948 and they have made possible many advances in technology, especially in computers, aerospace, industrial control systems and navigation. See also SEMICONDUCTIVITY; pp.882-883, 882.

Transistor radio. See RADIO, TRANSISTOR.

Transit, in astronomy, passage of either of the inner planets, Mercury and Venus, across the face of the Sun. Transits of Mercury occur every 13 years, those of Venus every 100 years. The term also signifies the motion of any celestial object across the observer's celestial meridian.

Transitional, in architecture, intermediate phase between about 1145 and 1190

when the transition in style from ROMANESQUE to GOTHIC (or, in Britain, from Norman to EARLY ENGLISH) was taking place.

Transition elements, metallic elements with chemical properties resembling those of their horizontal neighbours in the PERIODIC TABLE. They have incomplete inner electron shells, and are characterized by variable valencies, the formation of coloured ions and a tendency to form stable co-ordination compounds (complexes). They include elements with atomic numbers from 21 (scandium) to 29 (copper), 39 (yttrium) to 48 (cadmium), 57 (lanthanum) to 80 (mercury), and 89 (actinium) to 103 (lawrencium). The lanthanides and actinides are sometimes called inner transition elements. See also pp.888, 890.

Transjordan, region that today coincides with the Kingdom of Jordan in Asia Minor, bounded by Syria (N), Israel (W), Saudi Arabia (S) and Iraq (NW). Called Transjordan from the early 1900s to 1949, the region was part of the British LEAGUE OF NATIONS mandate of PALESTINE in 1920 and became an independent constitutional state in May 1923. By a treaty agreement with Great Britain in 1928, British financial assistance to Transjordan continued, accompanied by the presence of British military forces in the country; the region officially became the Hashemite Kingdom of Jordan in 1949, when national forces took from Palestine the areas W of the River Jordan which had been named Arab territories by the UN.

Transkei, black African "homeland" or Bantustan, E central Cape Province, South Africa. In line with S Africa's APARTHEID policy, Transkei became semi-independent in 1976; this however was not recognized internationally. Transkei is mostly mountainous territory. The prin-

Translocation

ciple occupation is rearing live-stock. The economy is based on money sent home by migrant labourers working in the Orange Free State and the Transvaal. Area: 39,000sq km (15,061sq miles). Pop. (1970) 1,733,931. See p.86.

Translocation, in vascular plants, the movement of food materials in solution through the tissues from one part of the plant to another.

Transmigration of souls, or reincarnation, belief that the soul is reborn in one or more successive mortal bodies. A tenet of Asian religions such as BUDDHISM, it was also taught by the PYTHAGOREANS and ORPHICS in 6th-century BC Greece and is common in tribal religions such as that of the South African Venda.

Transmission, engine, device (a gear or gears and shaft or driving chain) for transmitting power from the engine of a vehicle to the wheels. Speed can usually be varied in discrete steps, with gears or chains providing fixed speed ratios. See also p.496.

Transmission lines, in electrical engineering, wires or cables used to carry electrical power, or impulses such as telephone and other communications messages. Wires are slung between telegraph or other posts. Heavier cables, carrying electricity at high voltages, are slung on insulators between pylons, or buried underground, or laid underwater. See also pp.444, 635.

Transmitter, radio, electrical apparatus that generates radio waves. It has three main parts: an oscillator which generates high-frequency alternating electric current (a carrier wave); a modulator which encodes the carrier wave with the pattern or sound to be broadcast; and an amplifier which increases the power of the modulated carrier (the signal). See also pp.638-639.

Transmutation, in physics, formation of one element or isotope from another by RADIOACTIVE DECAY or by bombardment with energetic particles. The term was formerly applied to alchemists' attempts to convert base metals into gold.

Transpiration, in plants, the release of moisture from leaf surfaces or other plant parts. Of water entering plant roots, most is lost by transpiration. The process is slowed by darkness, extremes of temperature and inadequate water supply.

Transplants, changes or replacements of organs or tissues from one organism to another. Usually these involve a diseased organ such as a kidney being exchanged with a healthy one from a donor. A blood transfusion may be considered to be a transplant, because strictly speaking blood is a tissue. Heart, kidney, eye, testes, bone and skin transplants have worked for various periods. Drugs must be used to prevent the body's immune system from rejecting the organ as "foreign". See also pp.1078, 1097, 1097.

Transport, in chemistry and physics, movement of measurable entities such as MOLECULES, IONS, ISOTOPES, electrical charges, mass, momentum or energy through or across a medium, because of the natural or applied non-uniform conditions existing within it. Transport properties include viscosity, diffusivity, and thermal conductivity. Active transport in biochemistry is the movement of a substance against a concentration gradient.

Transport, Department of, British government department. It was first formed in 1918 to look after road-building and railways. In 1941 it was joined to the Ministry of Shipping and called the Ministry of War Transport. In 1946 it once more became the Ministry of Transport. In 1953 it became part of the Ministry of Civil Aviation, and in 1969 it became a subordinate department in the department for local government and regional planning. In the 1970s it was for a period part of the Department of the Environment before again becoming autonomous. Its duties cover road-building, road licensing and safety and road and rail transport.

Transportation, in geology, movement of particulate matter from a source to an area of deposition. Any movement of material with wind, water, ice or gravity as the

transporting medium falls into this category. See also pp.220, 224.

Transportation of convicts, policy originating in England in the 17th century of sending criminals to the colonies for life, or shorter periods. They were sent to America until the War of Independence and then in 1788 New South Wales, Australia, was set up as a penal colony. More than 160,000 convicts of both sexes were sent to Australia until 1868, when the policy was finally abolished in all its forms. See also p.1604.

Transsexualism, act of permanently changing one's sex or the desire to do so. A sex change may be accomplished partly through hormone treatment or through surgery, and in some countries the change can be accompanied by a legal change of status. Transsexuals may be allowed to marry. For a true hermaphrodite (a person born with both male and female characteristics), choice of sex is literally possible. See also p.1113.

Trans-Siberian Railway, railway that links European USSR to the Pacific. It was begun in 1891 and completed in 1905. It originally started at Chelyabinsk and ended at Vladivostok. The section of it which passed through Manchuria was known as the Chinese Eastern Railway. The present railway has several lines and is linked to the Turkestan-Siberian Railway.

Transubstantiation, Roman Catholic term defining the belief that, during the prayer of consecration at the MASS (the EUCHARIST), the "substance" of the bread and wine are changed into the "substance" of the body and blood of Christ, while the "accidents" (the outward form) remain unchanged. The doctrine was defined at the LATERAN COUNCIL of 1215 and was given classical expression later in the 13th century by St Thomas AQUINAS. The Eastern Orthodox Church holds an essentially similar doctrine, although most of its theologians prefer to avoid the use of the term. The definition involving "substance" and "accidents" was rejected by the reformers of the REFORMATION, but ecumenical discussions in recent years have revealed the underlying similarities in eucharistic belief between the Roman Catholic and other Churches. Many Roman Catholic theologians now regard the use of the term Transubstantiation merely as an attempt to use the Aristotelian philosophical language current in the 13th century to formulate belief in the REAL PRESENCE of Christ in the sacrament. See also CONSUBSTANTIATION.

Transuranic elements, those elements with atomic numbers higher than that of URANIUM (at.no. 92), the best known of which are members of the ACTINIDE series in the PERIODIC TABLE. All transuranic elements are radioactive and none occurs naturally. The first to be produced was NEPTUNIUM by E. M. McMillan and P. H. Abelson in 1940, who bombarded uranium with neutrons in a SYNCHROCYCLOTRON. The other elements have since been produced in a similar manner. The only commercially important element in the group is PLUTONIUM which is used in NUCLEAR WEAPONS.

Transvaal, province in the NE Republic of South Africa, between the Limpopo and Vaal Rivers. Inhabited by Bantu-speaking black Africans in the early 19th century, it was taken by the BOERS in the mid-1830s; the SAND RIVER CONVENTION of 1852 recognized the right of Boer self-administration. The South African Republic was formed in 1856, but the land was annexed by Britain in 1877. After a Boer revolt the Transvaal was again proclaimed a republic and granted internal self-government (1881). The discovery of gold in 1886 attracted many foreigners, but the Boers imposed heavy taxation and denied political rights to newcomers. At the close of the Boer War (1902), the Transvaal became a Crown colony and a founding province of the Union of South Africa in 1910. The capital is Pretoria, although the largest city is Johannesburg. Products include livestock, tobacco, cotton, wheat and citrus fruits. There is also mining for gold (it has the richest gold fields in the world), diamonds, uranium,

chromium and platinum. Area: 286,065sq km (110,450sq miles). Pop. (1970) 8,717,530. See p.2134.

Transverse wave. See WAVE.

Transvestism, sexual deviation in which a person identifies with and dresses like the opposite sex.

Transylvania, region in central Romania, surrounded by the Carpathian Mts; the chief city is Cluj. It is located on a plateau drained by the River Mureşul. Originally part of the Dacian Kingdom, Transylvania was conquered by the Romans in AD 106. Colonized by both German and Slavic tribes in the Middle Ages, the area was fiercely disputed by Austria, Hungary and Ottoman Turkey. It became part of Hungary by the AUSGLEICH of 1867 and was ceded to Romania in 1920. Both agriculture and mineral resources are important in modern Transylvania; stock raising and fruit growing are major activities and there is mining for coal, gold, manganese and iron. Area: 55,146sq km (21,292sq miles).

Traore, Moussa (1936-), military commander and politician of MALI. He became president through a coup in 1968 and in 1969 also took the office of premier.

Trapassi, Pietro (1698-1782), Italian poet and librettist, known as Pietro Metastasio. His libretti were intricate and classical.

Trapdoor spider, any of numerous species of brown and black spiders found throughout the world. It digs a tube-like, silk-lined burrow with a hinged lid covering the entrance. When the spider feels vibrations of passing prey, it rushes out and retreats with its captive. Genera include *Actinopus* (family Actinopodidae), of South America, Africa and Australia. Most species belong to the family Ctenizidae. Length: to 30mm (1.2in). See also p.33.

Trappists, popular name for the CISTERCIANS of the Strict Observance, a religious order of monks and nuns. The order originated in La Trappe Abbey, France, in 1664. They maintain silence, practise VEGETARIANISM and rise for Night Office. Manual labour is compulsory for the monks.

Trauma, injury to a living organism caused by external force or violence; also the emotional shock resulting from the injury. The word derives from the Greek for "wound".

Traumatic neurosis, neurotic disturbance caused by a severe emotional TRAUMA, frustration. The response to emotional shock varies according to the initial traumatic experience, eg an extreme fear of dogs after having been bitten. These reactions can manifest themselves only more generally, with symptoms including hysterical paralysis, irritability and sleep disturbances (frightening dreams).

Travellers' tree, palm-like plant native to Madagascar, so-called because each cup-shaped leaf base holds about 1 litre (1.75 pints) of drinkable water. It has large clusters of white blossoms and blue seeds. Height: to 28m (90ft). Family Strelitziaceae; species *Ravenala madagascariensis*.

Travel sickness, nausea, headache and other bodily upsets caused by the motion of road, air, seagoing and even rail vehicles.

Travers, Ben (1886-1982), British playwright whose immensely popular farces and comedies were compared with the work of FEYDEAU and PINERO. They include *Roosters* (1926), *Plunder* (1928), revived in 1976 at the National Theatre, London, *Banana Ridge* (1938) and *Corkers End* (1969).

Travers, Morris William (1872-1961), British chemist who, in collaboration with Sir William RAMSAY, discovered the rare gases of the atmosphere. Those found included argon, helium, neon, krypton and xenon. These researches are well described in his book *Discovery of the Rare Gases* (1928).

Travers, Pamela Lyndon (1906-), British writer, b. Australia, whose fame rests on the series of children's books about the adventures of a kindly, magical nanny. These were first recounted in *Mary Pop-*

pins (1934), which was the basis of a film of the same name produced by Walt Disney.

Traviata, La (1852), three-act opera by Giuseppe VERDI, with Italian libretto by Francesco Piave after *La Dame aux Camélias* by the younger Alexandre DUMAS. One of the most popular of Verdi's operas, it marked a new direction in his career. See also p.1599.

Travis, William Barrett (1809-36), US soldier and hero of the Battle of the ALAMO (1836). Trained as a lawyer, he moved to Texas in 1831 and soon became a leader in the fight for Texan independence from Mexico. When the Alamo was besieged by Gen. Santa Anna's army, Travis (the commander) was killed in its defence. See also p.1627.

Travois, vehicle once used by North American Indians of the Great Plains. It consisted of two poles joined to a man, a dog or a horse which dragged it along the ground. It had a net or platform between the poles at the open end that served as a carrier. See also p.470.

Trawler, fishing vessel that uses a conical net (or trawl), which is pulled through the water, snaring fish. Giant trawlers with electronic equipment are operated by the USA, Japan and the USSR. Smaller sailing trawlers, such as the Chinese trawling junk, are also still in use.

Trawling, method of catching bottom-dwelling fish, such as shrimps and flat fish. A large net, attached to towboards and pulling cables, is towed by the fishing vessel. This method is generally used only in continental shelf areas. Trawling can also be used in deeper water with an echolocator for finding schools and indicating specific depths. See also pp.738, 738, 744.

Trdat (fl. late 10th century), Armenian architect who went to Constantinople in 989 to rebuild the dome of HAGIA SOPHIA after earthquake damage. His most famous work is the Cathedral of Ani, which featured pointed arches and clustered piers some 150 years before they appeared in the West.

Treacle, heavy, sweet syrup that is produced as a by-product of SUGAR refining. Brown or almost black in colour, it is generally regarded as an edible grade of MOLASSES. See also pp.692-693, 693.

Treadmill, instrument of punishment consisting of a large wheel resembling a water wheel, which a prisoner had to turn by walking up inside it. Treadmills, also known as treadwheels, were invented in the USA in 1818 by William CUBBIT and used in the USA and Britain until the early 20th century.

Treason, offence against the state or the sovereign. Treason is the most serious criminal offence and is capital offence in many countries, including Britain. In Britain treason is defined by a series of ACTS OF PARLIAMENT to include the infliction of death or injury on the monarch, violation of defined members of the Royal Family, levying war against the government or giving assistance to the enemy.

Treasure Island (1883), novel by Robert LOUIS STEVENSON about pirates and buried treasure. Narrated by the boy-hero Jim Hawkins, the story involves such famous characters as Blind Pew and Long John Silver. See also p.1768.

Treasure trove, in British law, money, coins, silver, gold, bullion or plate, deliberately buried by an unknown owner and subsequently found. Objects simply lost by the original owner belong to the finder if the owner cannot be traced; but treasure trove belongs to the Crown, and anyone finding it and not reporting the fact to the police is liable for prosecution. See also MILDENHALL TREASURE; WATER NEWTON HOARD.

Treasury, British government department responsible for national finance and monetary policy. Dating from the NORMAN CONQUEST, when the chancellor and barons exercised control of royal revenue, the Treasury developed from the office of the Chancellor of the Exchequer. It became a separate ministry in the 19th century. The present department is headed by the Chancellor of the

Exchequer, although the Prime Minister is always the First Lord of the Treasury.

Treasury notes, currency notes issued by the British Treasury in 1914 to supplement the Bank of England's issue, in denominations of £1 and 10 shillings. The BANK OF ENGLAND took control of the notes in 1928 and replaced them with Bank of England notes of the same value.

Treasury Solicitor, in Britain, solicitor who advises the Treasury. The office is generally (but not necessarily) held by a barrister, who is responsible for all legal matters pertaining to the Treasury. The Treasury Solicitor is also HM Procurator General, but is no longer director of public prosecutions.

Trebizond, Empire of, BYZANTINE kingdom on the Black Sea. It was founded by members of the Comnenus family in 1204 after the fall of Constantinople to the 4th Crusade. Despite the onslaughts of the SELJUK TURKS, MONGOLS and the armies of Constantinople, it maintained its autonomy and flourished as a cultural and commercial centre until 1461, when MEHMET II conquered Trebizond and made it part of the OTTOMAN EMPIRE.

Trebuchet. See MANGONEL.

Tree, Sir Herbert (Draper) Beerbohm (1853-1917), British actor and theatre manager; half-brother of MAX BEERBOHM. He made his debut in 1876 and ran the Haymarket Theatre from 1887 to 1897.

Tree, woody, perennial plant with one main stem or trunk and smaller branches. The trunk increases in diameter each year, and the leaves may be evergreen or deciduous. The largest trees, Redwoods, can grow more than 90m (300ft) tall; the giant SEQUOIAS can live for up to 4,000 years. See also pp.368-369, 374-376, 377.

Tree, in mythology, usually part of the initial structure or design of Creation, commonly revered in sacred groves. In Scandinavian myths, the tree YGGDRASIL was the foundation of the world, to be destroyed only at RAGNARÖK, the end of the present age. In the Bible, the Tree of the knowledge of good and evil was, with the serpent, all that stood between innocence and ORIGINAL SIN.

Tree creeper, brownish agile bird that scurries up and down trees in cooler areas of the Northern Hemisphere. It uses its long, slightly down-curved bill to probe for insects under the bark, bracing itself with its long, spine-tipped, stiff tail. Length 13cm (5in). Species *Certhia familiaris*. See also p.307.

Tree cricket, slender, whitish or pale green CRICKET found in warmer climates throughout the world. It lays its eggs among the twigs of a tree or shrub. Length: 13mm (0.5in). Family Gryllidae; subfamily Oecanthinae.

Tree fern, tree-like FERN of the family Cyatheaaceae. Tree ferns grow in tropical regions, particularly moist mountainous areas. The trunks are crowned with large fronds, bearing spore cases on the lower surfaces. Height: 3-25m (10-80ft). There are 600 species. Genus *Cyathea*. Some unrelated CYCADS are also called tree ferns. See also pp.308, 308.

Tree frog, FROG found throughout the world, generally living in trees. The tree-living species have long, thin hindlegs and enlarged sucking discs on their toes. Length: to 14cm (2.75in). Family Hylidae; there are 460 species. See also AMPHIBIANS; p.65.

Tree hopper, any of 2,600 species of mainly tropical, HOMOPTERAN insects that suck plant juices. Most have an enlarged THORAX which extends over the head and forms a spine over the body. Species may be green, blue or bronze and may have spots or stripes. Many are considered to be pests because their feeding habits cause damage to growing crops and help to spread plant diseases. Family Membracidae. See also p.45.

Tree lungwort, typical "leafy" LICHEN of the north temperate zone; it is possibly the most striking of the British lichens. Its leaf-like structures, which may attain a length of 10cm (4in), are bright green when wet; when dry, yellowish brown. Reproduction is by means of spores, which are produced in cup-shaped struc-

tures on the surfaces of the "leaves". Species *Lobaria pulmonaria*. See also p.361.

Treen, small wooden objects in daily use, mostly associated with the kitchen, games, personal adornment and toilet articles. The definition has widened to include utensils made of bone, horn or ivory.

Tree of Jesse, favourite church decoration, sometimes of wood but more usually of glass, showing the genealogy of Jesus from Jesse, the father of DAVID. There are fine examples at St Denis, Chartres, and New College, Oxford.

Tree shrew, small mammal found from India throughout SE Asia to Indonesia. It looks like a long-snouted squirrel without whiskers, but is classified as a primitive PRIMATE. A tree dweller, it is grey-brown in colour and feeds on insects and fruit. Family Tupaiidae; species *Tupaia glis*. See also pp.102, 102, 312.

Trefoil, any of numerous plants, such as CLOVER, with leaves divided into three parts. Bird's-foot trefoil is a perennial, used as hay and forage. Family Leguminosae; species *Lotus corniculatus*.

Trelawny of the "Wells" (1893), comedy of stage life by Sir Arthur Wing PINERO. It was first performed in London and has been often revived. In 1972 there was a musical version, *Trelawny*, with music and lyrics by Julian SLADE.

Trematodes, members of a class (Trematoda) of invertebrate animals including nearly 6,000 species of parasitic FLATWORMS and FLUKES. Parasitic trematodes have a thick outer cuticle and one or more suckers for attaching to the tissues of the host. They are bilaterally symmetrical, and commonly found as endoparasites or ectoparasites in all classes of vertebrates, including human beings. Length: to 10cm (4in). See also pp.16-17.

Tremor, involuntary quivering of a voluntary muscle. It may vary in intensity and duration and often occurs in conjunction with debilitated states or organic disorders.

Trench, deep V-shaped depression of the sea floor. In PLATE TECTONIC theory trenches are places where one plate is being pushed under another. They are the deepest - to 11km (7 miles) - formations on earth and are found primarily along the borders of the Pacific Ocean. See also p.198.

Trenchard, Hugh Montague, 1st Viscount (1873-1956), British soldier and airman, Marshal of the RAF. He entered the army in 1893 and fought in the SOUTH AFRICAN WAR. As Chief of the Air Staff (1919-29) he organized an offensive air strategy during WWII. He was also Commissioner of the Metropolitan Police (1931-35).

Trench fever, infectious disease caused by a RICKETTSIA transmitted by body lice, characterized by fever and pain in muscles, bones and joints.

Trent, Jesse Boot. See BOOT, JESSE.

Trent, river in central England. It rises on Biddulph Moor, Staffordshire, and flows SE and then NE across central England to join the River Ouse and form the Humber estuary. The third-longest river in England, the Trent passes through the POTTERIES. Length: 274km (170 miles).

Trent, Council of (1545-63), the 19th ecumenical council of the Roman Catholic Church convened to state the Church's doctrinal position in the face of PROTESTANTISM and to institute internal reform. With a background of complex diplomatic relations between the Catholic European powers, the Council met at the town of Trent in N Italy during 1545-47 under PAUL III, 1551-52 under JULIUS III and 1562-63 under PIUS IV. Some 16 doctrinal decrees were issued, dealing with original sin, justification, the sacraments, the cult of saints, purgatory and indulgences; the authority of the pope and bishops was reinforced. See also p.1406.

Trent Bridge, cricket ground at Nottingham, England, home of the Nottinghamshire County Cricket Club. It was opened in 1838 and has been a test match ground since 1899. It can accommodate about 30,000 spectators.

Trenton, state capital in w New Jersey, USA, on the Delaware River. During the

AMERICAN WAR OF INDEPENDENCE Trenton was the scene of the battle in which Gen. George WASHINGTON crossed the Delaware River to capture Hessian troops in Dec. 1776. The city became the state capital in 1790. Industries: motor vehicle components, plastics, metal products, rubber goods, steel cables, textiles. Pop. (1970) 104,638.

Trepannation, also called trephination, the operation of boring a circular hole in the skull to permit access to the BRAIN. The instrument used is a trepan, which resembles a carpenter's bit with a handle. See also pp.1096, 1108, 1116.

Treponema, genus of anaerobic SPIROCHETES. Several species cause diseases in human beings; *T. pallidum* causes SYPHILIS and *T. pertenue* causes yaws, an ulcerative skin infection. They can be treated with PENICILLIN. See also BACTERIA.

Trésaguet, Pierre-Marie-Jérôme (1716-1796), French civil engineer whose work formed the basis of the European road system. He introduced lighter and well sorted stones in their construction, saw the importance of good drainage and introduced the idea of regular road maintenance. His methods were later adopted throughout Europe.

Trespass, any breach of the law other than treason. It became a common action in England in the reign of EDWARD I, when there were three chief varieties: trespass *vi et armis* (with force and arms), such as assault and battery; trespass *quare clausum fregit*, the passing on, or allowing animals or objects to pass on, another's property without leave; and trespass *de bonis asportatis*, the stealing of chattels.

Très Riches Heures du duc de Berry, Les, BOOK OF HOURS, attributed to the LIMBURG brothers and unfinished at the time of the death of their patron, Jean de Berry in 1416. A fine example of the French INTERNATIONAL GOTHIC style, the book is a series of calendar illuminations depicting the surroundings and occupations of peasantry and nobles in different months of the year. It is now in the museum at Chantilly, France.

Tresselt, Robert (1871-1911), pseud. of Robert Noonan, the Irish author of the influential political novel *The Ragged Trousered Philanthropists*, published posthumously in 1914.

Trevelyan, George Macaulay (1876-1962), British historian, whose great literary gifts found expression in many historical works. He is best known for *British History in the Nineteenth Century* (1922), *History of England* (1926), and *English Social History* (1944).

Trevi Fountain (1732-62), celebrated fountain in Rome designed by Nicola Salvi (1697-1751) and completed by Giuseppe PANNINI. Occupying almost the whole of the small Piazza Barberini in which it is set, it is a huge marble monument in High BAROQUE style and features Neptune standing on a shell being drawn by horses. According to legend, people who throw coins into it will return to Rome.

Trevino, Lee B. (1939-), US golfer. He twice won both the US Open Championship (1968, 1971) and the British Open (1971, 1972).

Treviranus, Gottfried Reinhold (1776-1837), German naturalist who is best known for his studies, both anatomical and histological, of invertebrates. Because of his six-volume work *Biology, or Philosophy of Living Nature* (1802-22) he has been credited with originating the use of the term "biology".

Trevithick, Richard (1771-1833), British engineer and inventor known for his invention of the high-pressure steam engine. A mining engineer in Cornwall, he experimented with model stationary and locomotive engines from 1797. In 1801 he completed the first steam carriage and in 1803 built in Wales the first steam railway locomotive. Later he adapted his engine to drive an iron-rolling mill (1805), propel a barge (1805) and drive a threshing machine (1812). In 1814 his engines were ordered for use in the silver mines in Peru, and in 1816 he went there himself. He returned penniless in 1827 to find that others were now profiting from his engine.

He died in poverty. See also pp.422, 422, 506.

Trevor-Roper, Hugh Redwald (1914-), British historian. He was a student (or fellow) of Christ Church, Oxford (1946-57) and was appointed regius professor of modern history at Oxford in 1957. His books include *Archbishop Laud* (1940), *The Last Days of Hitler* (1947), *The Gentry, 1540-1640* (1953) and *A Hidden Life, the enigma of Sir Backhouse, Bart.* (1976).

Triad Society, secret society of Chinese in S China opposed to the MANCHU DYNASTY. It existed from the earliest days of the Manchus in the 17th century until the 19th century, when they lent their support to the TAIPI REBELLION. Known in Chinese variously as the Hung League or Heaven and Earth Society, members of the Triad Society have kept the secret organization alive into the 20th century.

Trial, in law, judicial examination or hearing of the facts in a civil or criminal case. A jury may or may not be present.

Trial, *The* (1925), novel by FRANZ KAFKA, published posthumously. Joseph K, the solitary central character, wakes to find himself inexplicably under arrest. The work is generally regarded as a symbolic rendering of the hopeless relation between man and bureaucratic authority.

Trial by battle, medieval method of defending oneself against criminal or civil charges, introduced into England by the Normans as an alternative to TRIAL BY ORDEAL. The accused fought the defendant (criminal case) or a named champion (civil case). It was used as late as 1817 and abolished in 1819.

Trial by Jury (1875), one-act operetta by Arthur SULLIVAN and William GILBERT, called by its makers a "novel and original cantata". It was their first major success, produced at the Royalty Theatre, London. It lasts for only about 40 minutes and is the only Gilbert and Sullivan opera to contain no spoken dialogue.

Trial by jury, trial by a number of people (usually 12), who are sworn to deliver a verdict in a court of law upon the evidence presented. As a method of trial it developed from the ANGLO-SAXON judicial custom of acquitting a person of criminal charges if his peers (jurators or compurgators) swore to his innocence. It is now the main method of trying criminal cases and some civil cases at common law. See also JURY.

Trial by ordeal, ancient form of trial, practised in England by the Anglo-Saxons and Normans. The theory underlying trial by ordeal was that God would intervene to help the accused. There were three main methods: by hot iron, by cold water, and (for the clergy) by the addition of choking substances to food.

Triangular Trade, 17th- and 18th-century trading system between the Old and New Worlds, following the prevailing winds. Ships carried slaves from West Africa to the Americas and then brought products such as tobacco back to Europe.

Triangulation, in navigation and land surveying, a method of determining distance. The area under survey is divided into triangles. The baseline of one triangle is measured and the angles that it makes to its vertex are measured with a THEODOLITE. The distances from each end of the baseline to the vertex can be calculated by trigonometry.

Triangulum (The Triangle), faint northern constellation between ANDROMEDA and ARIES. It contains the spiral galaxy M33 (NGC 598), a member of the Local Group located 2,350,000 light years from the Milky Way system.

Triangulum Australe (the Southern Triangle), southern circumpolar constellation. The three brightest stars Alpha, Beta and Gamma (all third magnitude or above) form the conspicuous triangular figure.

Triassic Period, first section of the MESOZOIC PERIOD, lasting from 225 to 190 million years ago. Following upon a wave of extinctions at the close of the Permian, many new kinds of animals developed. On land lived the first DINOSAURS. Mammal-like reptiles were common and by the end

Tribal society

Triggerfish use chisel-like teeth to crack coral and the shells of oysters and crabs.

Trigonometry is the principle used by surveyors to measure angles and distances

Trilby, staged in London (1895), gave its name to the felt hat worn in the play.

Trilobites are generally considered to be the ancestors of insects, spiders and crabs.

of the period the first true MAMMALS existed. In the seas lived the first ichthyosaurs, placodonts and nothosaurs. Also, the first frogs, turtles, crocodilians and lizards appeared. Plant life consisted mainly of primitive gymnosperms, with ferns and conifers predominating. See also pp.268, 269.

Tribal society, group which lives in a particular area, speaks the same language, has a unified social organization and is culturally homogeneous.

Tribune, senior military and civil official of ancient Rome. During the Republic there were six tribunes to a legion, each commanding a cohort; during the empire such posts were often filled by the emperor's nominees. In civil politics from 450 BC there were ten tribunes of the plebeian class; their powers of initiating prosecutions and introducing legislation passed to the emperor in 27 BC. See also pp.1224, 1226.

Trichina, organism which causes TRICHINOSIS. It is a roundworm, or nematode (full name is *Trichinella spiralis*), the adult worm being a few millimetres long. It lives harmlessly in the human large intestine but the larvae, which cause the symptoms of trichinosis, escape from the body in the faeces and find their way into the bodies of rats, pigs and other animals, where they encyst in muscle.

Trichinosis, disorder of human beings and many other mammals caused by infection with the larvae of a parasitic NEMATODE worm (*Trichinella spiralis*). Most human cases originate from eating raw or undercooked pork. Symptoms include abdominal pain, vomiting, swelling and delirium and possible permanent heart and eye damage may result. Thiabendazole is becoming a widely adopted drug in the treatment of the disorder.

Trichloroethylene, colourless, nonflammable liquid, C_2HCl_3 , with a smell of CHLOROFORM. It is manufactured from tetrachloroethane by heating or treating it with lime, and it is used as a degreasing agent and extraction solvent. Properties: s.g. 1.46; b.p. 86.7°C (188.1°F); m.p. -73°C (-99°F).

Trichoptera. See CADDISFLY.

Tricyclic compound, organic chemical that has three rings as its primary structure. Examples are ANTHRACENE and phenanthrene.

Tricyclic drugs, drugs belonging to one of the two main groups of antidepressants; they include IMPRIMINE and amitriptyline, both of which are useful in the treatment of chronic DEPRESSION. The results of treatment by the use of tricyclic drugs compare favourably with those of ECT (electroconvulsive therapy). See also pp.1116, 1117.

Triennial Act (1641), act of the LONG PARLIAMENT in England which compelled the king to summon parliament at least once every three years. It was passed to avoid the possibility of a king ruling without parliament, as CHARLES I did from 1629 to 1640. It was superseded by the SEPTENNIAL ACT of 1716.

Trieste, seaport city in NE Italy, on the Gulf of Trieste 113km (70 miles) ENE of Venice. It was made an imperial free port in 1719 (until 1891) and an Austrian crown land in 1867. It was ceded to Italy in 1919 and occupied by Yugoslavia in 1945. Yugoslavia and Italy agreed to a territorial compromise in 1954 and Trieste was returned to Italy. It is an important industrial and commercial centre with large shipyards and a variety of manufactures, including steel, textiles and petroleum. Pop. (1975) 270,641. See also pp.1672, 1672.

Triforium, in church architecture, the space in the higher nave between the clerestory windows and the vaulting of the side aisles. In Romanesque times the triforium provided ventilation and light, and with the development of Gothic vaulting it decreased in height and the arcades became more intricate. The decorative effect of the triforium is well displayed in the Angel Choir (1282) in Lincoln Cathedral.

Triggerfish, any of several tropical marine fish found in warm shallow Pacific waters, identified by a dorsal fin spine which can

be erected to lodge the fish in a coral cavity, as a protection against predators. Its laterally compressed body is often beautifully coloured. Length: to 60cm (24in). Family Balistidae; typical genus *Balistoides*. See also pp.58, 60, 63.

Triglyceride. See LIPID.

Trigonometry, use of three basic ratios to calculate unknown values in triangles. If three parts (either the length of sides or angles) including one side of a triangle are known, then all the other values may be found. The three basic ratios - TANGENT, COSINE and SINE - are published in tables for any angle. See also p.796.

Trilby (1894), novel by George DU MAURIER based on his experiences in an artist's studio in Paris. The young model falls into the clutches of SVENGALI, who hypnotized her into becoming a great concert singer.

Trilobite, any of several species within an extinct group of ARTHROPODS found as fossils in marine deposits, ranging in age from Cambrian through Permian times. The body is mostly oval, tapering towards the rear and was covered by a chitinous skeleton. The name refers to the division of the body into three distinct longitudinal segments, consisting of a central axis and two lateral lobes. The cephalon (headshield) carried sensory organs. Transverse divisions show segmentation and bear pairs of jointed limbs. Most species were bottom-crawling, shallow-water forms and range in size from 6mm (0.25in) to 75cm (30in). See also pp.182, 274, 274.

Trimaran, sailing craft with three hulls, resembling the twin-hulled CATAMARAN.

Trinidad and Tobago, independent nation made up of the two southernmost islands of the West Indies. Formerly a British possession, the islands became an independent member of the Commonwealth in 1962. Major sources of income are sugar production, petroleum and tourism. The capital is Port of Spain on Trinidad. Area: 5,128sq km (1,980sq miles). Pop. (1979 est.) 1,157,000. See p.100.

Trinitrotoluene. See TNT.

Trinity, central doctrine of Christianity, according to which God is three persons: the Father, the Son and the Holy Spirit (or HOLY GHOST). There is only one God, but he exists as "three in one and one in three". The nature of the Trinity is held to be a mystery that cannot be fully comprehended. The doctrine of the Trinity was stated in early Christian creeds to counter heresies such as Gnosticism, which denied that Christ was wholly human during His life on earth, and Arianism, which denied the true divinity of Christ. Orthodox Christianity holds that God the Son is man but He is also "of one substance with the Father". See also APOSTLES' CREED; ATHANASIAN CREED; CHRISTOLOGY; HOLY GHOST; JESUS CHRIST; NICENE CREED.

Trinity House, Corporation of, public corporation of British seamen founded in 1512 when the guild of mariners and lodgesmen of Deptford Strand, Kent, requested a charter for pilotage. Its present powers were fixed in 1913. Today it is responsible for pilotage and the administration of lighthouses, lightships and buoys in England and Wales.

Trintignant, Jean-Louis (1930-), French film actor. He appeared in commercially successful films such as *A Man and a Woman* (1966) and took major roles in rather more serious films. In ROHMER's *My Night with Maud* (1965) and BERTOLUCCI's *The Conformist* (1970) his portrayals of characters beset by a conflict of motives won widespread critical acclaim.

Triode. See ELECTRON TUBE.

Trioleto, poetic form first used by the French in the 13th century. It consists of eight lines with two rhymes. The first two lines are repeated as the seventh and eighth, and the first line is also repeated as the fourth. Triolets were introduced into English verse in the 17th century.

Tripartite Pact (27 Sept. 1940), military and political alliance signed between Germany, Italy and Japan. Known as the Axis powers, the signatories pledged full military and political co-operation.

Triple Alliance, name given to various diplomatic agreements between three countries. The most important was the Triple Alliance formed in 1882 when Italy joined the Dual Alliance of Austria - Hungary and Germany (renewed in 1891) to counterbalance the Alliance of Russia and France. The Alliance intended to bind its members to assist one another in the face of an attack by Russia or an ally of Russia and, in the event of an attack by any other power, to remain at least neutral. Other triple Alliances were those of 1668 between England, Holland and Sweden to oppose the advance of France; of 1717 between England, France and Holland against Spain; and of Brazil, Argentina and Uruguay in the war against Paraguay (1865-70). See also pp.1660.

Triple Alliance, War of the (1865-70), also known as the Paraguayan War, a conflict between Paraguay on one side and Argentina, Brazil and Uruguay on the other. Long-standing territorial disputes and Brazilian intervention in the Uruguayan civil war prompted Francisco Solano López of Paraguay to declare war on Brazil in March 1865; by May 1865, the conflict involved all four countries. The war devastated Paraguay: 1,000,000 Paraguayan lives and 142,450sq km (55,000sq miles) of Paraguayan territory were lost.

Triple jump, in athletics, an event similar to the long jump with the exception that the contestant makes a hop, a skip (step) and a jump. The jump is a failure if the jumper lands with a wrong foot.

Triple point, temperature and pressure at which all three phases (solid, liquid and gas) of a substance can coexist. For water, the triple point occurs at 0°C and at less than 1% of atmospheric pressure. See also p.838.

Tripoli, seaport city in Lebanon, thought to have been founded c.700 BC. After capture in 638 by the MUSLIM Arabs, the inhabitants adopted both the Arabic language and the religion of ISLAM. The city was taken in 1109 by Raymond de Saint-Gilles, Count of Toulouse, and sacked in 1289 by the MAMELUKES. It is situated at the terminal of an oil pipeline from Iraq. Once a prosperous town, it suffered severe damage and disruption of trade in the civil war in the Lebanon in the mid-1970s. Industries: cotton goods and soap manufacture, tobacco and fruit processing. Pop. (1978 est.) 175,000. See also pp.1311, 1311.

Tripoli, capital and chief port of Libya, on the Mediterranean Sea, 644km (400 miles) W of Benghazi. Founded in the 7th century BC by the Phoenicians, it was captured by the Romans in the 1st century BC, by the Vandals in 5th century AD and the Arabs in the 7th century. It developed as an important market centre for trans-Saharan caravan routes. Tripoli was taken by Italy in 1911 and made the capital of the Italian colony of Libya; it is an administrative and commercial centre. Industries include textiles and cigarettes. Pop. 551,477.

Tripolitania, historic region in W Libya. Founded as three Phoenician colonies on the N coast of Africa in the 7th century BC, it was ruled at different times by the Carthaginians, Romans, Vandals, Byzantines, Arabs and the KNIGHTS HOSPITALIERS. In 1557 it fell to the OTTOMAN EMPIRE and in the 18th century engaged in piracy as one of the BARBARY STATES. Tripolitania finally became part of the Italian colony of Libya in 1912, was captured by the British in 1943, and in 1951 became part of Libya. It is now a predominantly agricultural area, producing fruit and vegetables. Manufactures include carpets, metal goods, handicrafts and leather goods.

Triptych, in art, three hinged panels either painted or carved, traditionally used as an altarpiece. The panels may form one picture or the outer panels may be separate and subordinate to the central picture.

Tripura, state in NE India, bordered to the N, W and S by Bangladesh; Agartala is the capital. The region was annexed to Britain in 1808 from the Mogul Empire, and became part of India in 1947. Rodhaki-shorepar is a Hindu pilgrimage centre.

Most of the people work in agriculture; jute is the chief product. Pop. (1971) 1,556,822. Area: 10,477sq km (4,045sq miles).

Trireme, narrow wooden warship used by Mediterranean navies from the 5th century BC. Triremes had three banks or rows of oarsmen on each side, and carried a large ram and a small complement of soldiers. When not in battle, the vessel was powered by a single square sail. See also p.566.

Tristan, or Tristram, hero of many medieval romances, most commonly as a knight of the Round Table in the Arthurian legend. The tale of his fatal love for the Irish princess Isolde (or Iseult) is the subject of Matthew ARNOLD's poem *Tristram and Isolde* and Richard WAGNER's opera *Tristan and Isolde*.

Tristan and Isolde (c.1210), courtly romance epic by Gottfried von Strassburg, written in Middle High German. Based on an earlier story by the Anglo-Norman poet Thomas, it recounts one of the most famous and tragic love romances which in c.1240 was incorporated into Arthurian legend. In this form it has been retold many times by poets and composers, including Thomas MALORY, Alfred TENNYSON and Richard WAGNER.

Tristan and Isolde (1865), three-act opera by Richard WAGNER with libretto by the composer, based on Cornish legend. The expressive potential of the orchestra in opera reached new heights with Wagner's use of LEITMOTIV. This device, and the masterly characterization in the title roles (achieved by penetrating psychological insight) make the work a landmark in operatic history.

Tristan da Cunha, group of three islands in the S Atlantic Ocean located midway between S Africa and South America; the only inhabitable island is Tristan; the group was discovered in 1506 by the Portuguese and annexed by Britain in 1816. In 1961 Tristan suffered a volcanic eruption that caused the complete evacuation of the island, although most of the population returned in 1963. Area of Tristan: 98sq km (38sq miles). Pop. (1970) 280.

Tristram Shandy, The Life and Opinions of (1760-67), novel in nine volumes by Lawrence STERNE. His whimsical imagination and ironic sense made the novel an immense success. See also HC2 p.34.

Tritium, radioactive ISOTOPE of HYDROGEN, the nucleus of which consists of one proton and two neutrons. Only one atom in 10¹⁷ of natural hydrogen is tritium. Tritium compounds are used in radioactive tracing. Properties: at.wt. 3.017; half-life 12.3 yr.

Triton, in Greek mythology, a sea god, son of POSEIDON and AMPHITRITE. He was half man, and half fish, with a scaled body, sharp teeth and claws and a forked fish tail. He had power over the waves and possessed the gift of prophecy. Triton blowing a conch shell seems to have been the personification of the roar of the wild sea.

Triton, large GASTROPOD MOLLUSC found in tropical marine waters near coral reefs. Its shell is used as a religious musical instrument in Shinto temples in Japan. Length: to 40.6cm (16in). Family Cymatiidae; species include the brown-and-pink *Charonia tritonis*.

Triton, nucleus of TRITIUM atom, consisting of one proton and two neutrons.

Trochee, metrical foot consisting of a stressed followed by an unstressed syllable, or a long followed by a short, as in the word "happy". Trochaic metre, is popular in children's verses (*Mary Had a Little Lamb*) and in verses where a regular repetitive rhythm is desired.

Troglodytes, Greek name for various primitive tribes; they were mentioned by a number of Greek and Roman writers, such as Strabo, HERODOTUS and Diodorus. They were thought to live in the N Caucasus, where they lived in caves, and in NW and the interior of N Africa, where they probably lived in wicker huts. They mostly were naked, eating the bones and hides of their cattle as well as the flesh, and drinking a mixture of blood and milk. In

modern biological science, *Troglodytidae* is the name of the family of birds to which the WREN belongs.

Trogon, brilliantly coloured bird of dark tropical forests in America, Africa, and Asia. Trogons nest in holes in trees and feed on fruit and some insect larvae. Both parents incubate the eggs. Length: about 30cm (12in). Family Trogonidae; typical genus *Trogon*.

Trogoniformes. See TROGON.

Troilus, son of the Trojan king PRIAM, slain by ACHILLES at the beginning of the TROJAN WARS. His love for CRESSIDA, celebrated by CHAUCER and SHAKESPEARE, has no place in Greek sources, but was first described by Benoit de Sainte-More in the 12th-century romance, *Roman de Troie*.

Troilus and Cressida (1602), five-act play by William SHAKESPEARE. Cressida falls in love with the Trojan prince, Troilus, but when exchanged for a Trojan prisoner of war transfers her affections to the Greek Diomedes.

Troilus and Criseyde (c.1380), long narrative poem by CHAUCER based on the *Filostato* of BOCCACCIO. See also pp.1348, 1349.

Trois Frères, cave in S France decorated with Upper Palaeolithic paintings and engravings, dating c.40,000-c.10,000 BC. Most of the figures are unusual in that they represent half-human beasts; the largest of these is 4m (13ft) high.

Trojan asteroids, minor planets, named after Homeric heroes of the Iliad. They comprise two groups situated in the orbit of Jupiter, one group behind the planet and the other ahead of it.

Trojan horse, in the Homeric epic, *The Iliad*, a colossal hollow wooden horse built by the Greeks in the final days of the siege of TROY. Despite warnings the people of Troy dragged the horse through their gates and in the night those Greeks who had been hiding within its body emerged and opened the gates of Troy to their army.

Trojans, The (composed 1856-58), five-act opera by Hector BERLIOZ with French libretto by the composer based on VIRGIL'S *Aeneid*.

Trojan Wars, The, in Greek mythology, a conflict between the Greeks and the Trojans. PARIS, a Trojan prince, abducted HELEN, the wife of MENELAUS, a Spartan. Menelaus' brother AGAMEMNON led the Greeks into war with Troy, and the ten-year siege of Troy culminated in the incident of the TROJAN HORSE. The story of the siege is told by HOMER in the *Iliad*, and the heroes of the battle were ACHILLES, PATROCLUS, ODYSSEUS and Nestor.

Trojan Women (415 BC), tragedy by the Greek playwright EURIPIDES. It deals with the destruction of Troy and with the fate of the wives of the men killed in the War. **Troll**, in Icelandic mythology, a malignant one-eyed giant; in Scandinavian mythology, a mischievous dwarf. Trolls were skilled metalworkers living in the hills and occasionally making forays to steal from human beings. They were frightened by noise, from a memory of the time when THOR threw his hammer at them.

Trolley bus, public conveyance developed from the TRAM and powered by electricity from overhead cables. A trolley arm reaches from the car to the cable. Trolley buses do not run on metal tracks but on rubber tyres, and so two wires are used, the second being a return circuit. By the early 1900s there were commercial trolley bus systems in Europe; the first British routes began in 1911 in Bradford and Leeds. See also pp.500-501, 500.

Trollope, Anthony (1815-82), British novelist who travelled widely while working for the post office. His fame rests chiefly on his series of Barsetshire novels, epitomizing Victorian society. These include *The Warden* (1855), *Barchester Towers* (1857) and *Doctor Thorne* (1858).

Trombone, brass musical instrument with a cylindrical bore, cupped mouthpiece and flaring bell. It is usually played with a slide, except for a variant which has three or four valves. The tenor and bass trombones have a range of three and a half octaves. See also pp.1580-1581, 1580.

Trompe l'oeil (French "trick the eye"),

painting that attempts to deceive the eye of the beholder by convincing him of the material reality of the objects depicted.

Tromsø, city in NW Norway on Tromsø island; capital of Tromsø county and the chief city of arctic Norway. The German battleship *Tirpitz* was sunk by the British off Tromsø during WWII. There is a university (1968) in the city, which is also the centre of an important herring fishing industry. Other industries include shipbuilding, rope and seal hunting. Pop. (1980) 45,833.

Trondheim, city in central Norway, on the S shore of Trondheim fjord (an inlet of the Atlantic Ocean); the second-largest city in Norway. Founded in 997, it was the political and religious capital of medieval Norway. Trondheim developed as a commercial centre in the 19th century. The city exports wood and metal products, and has food processing, shipbuilding and hardware industries. Pop. (1980) 134,726.

Trooping the Colour, British military parade at HORSE GUARDS Parade, London, at which the regimental flag, or colour, is carried between formations of soldiers and presented to the sovereign. The ceremony was probably originally held to familiarize non-British troops with the flag they were to follow. It is now held in early June on the sovereign's official birthday.

Trope, figure of speech in which a phrase or word is used in an unusual context to draw attention to its literal sense. The most common types of trope are METAPHOR and IRONY. Trope, in its musical sense, refers to a phrase or verse introduced as a refinement into some part of the MASS.

Tropical diseases, diseases associated with hot, often wet, climates. They include MALARIA, LEPROSY, BILHARZIA, TRYPAANOSOMIASIS (sleeping sickness), LEISHMANIASIS (kala azar, espundia etc.), CHOLERA and YELLOW FEVER. The infectious agents of these and other diseases of the tropics range from viruses through bacteria, protozoa, fungi and worms of various kinds. Often more specific to the tropics are the vectors of these disease microbes, eg. the mosquitos which spread the virus of yellow fever and the protozoan parasite of malaria. See also pp.1082-1083.

Tropical fish, any of numerous species of small decorative fish, mainly from the Amazon Basin or the waters of SE Asia; they are commonly kept in captivity in domestic aquaria. Species may live in either fresh or saltwater, generally at temperatures at or above 24°C (75°F). Species include the GUPPY and GOURAMI; more exotic types include the TRIGGERFISH and ANGELFISH.

Tropic bird, whitish sea bird with black markings found in Pacific and Indian Ocean waters where it dives for food. It has a long, bright bill and long, streamer-like central tail feathers. Length: to 50cm (20in). Family Phaethontidae; genus *Phaethon*.

Tropics. See CANCER, TROPIC OF; CAPRICORN, TROPIC OF.

Tropism, response in growth, movement or orientation of a plant, a lower animal or a part of either to a directional, external stimulus such as light (PHOTOTROPISM), gravity (GEOTROPISM) or water (HYDROTROPISM). Most responses to such stimuli are orthotropic (they are directed towards the stimulus).

Troposphere, lowest part of the Earth's atmosphere. In it temperature decreases with height, and it is within this region that clouds and other weather phenomena occur. The troposphere extends 16km (10 miles) above the Earth's surface.

Trossachs, The, glen in Central Region central Scotland, between Loch Achray and S end of Loch Katrine. The region was made famous in the poems of William WORDSWORTH and Sir Walter SCOTT. It is a popular tourist centre.

Trotsky, Leon Davidovitch (1879-1940), Russian Bolshevik leader. Chairman of the St Petersburg Soviet, he was prominent in the 1905 revolution, after which he was tried and escaped abroad. He returned to Russia in time for the March 1917 revolution. As head of the Military

Triremes are believed to have originated with the Phoenicians c.500 BC.

Trogons have broad bills surrounded by bristles which help in catching insects.

Troll, a figure used by Henrik Ibsen for the mountain king in his *Peer Gynt* (1867).

Leon Trotsky was a forceful and revolutionary Russian Communist leader.

Trotskyism

Harry S. Truman at a press conference during his visit to London in 1956.

John Trumbull's Declaration of Independence shows his skill at portraiture.

Trunkfish swims by rotary movements of its fins, using its tail as a rudder.

Truss; the principle combines strength with lightness and is used in making bridges.

Revolutionary Committee of the Petrograd Soviet he was in charge of its defence, resulting in his seizure of power. As commissar for foreign affairs (1917-18) he negotiated for peace at BREST-LITOVSK, but resigned after the treaty was concluded. As commissar for war (1918-25) he created and led the Red Army in the civil war. After LENIN's death he was ousted from power by STALIN. Trotsky was expelled from the Party in 1927 and from the country in 1929 as a leader of the left opposition. He was murdered in Mexico in 1940, probably by an agent of Stalin. Fiercely independent, he was a brilliant polemicist and a fiery speaker. See also pp.1676-1677, 1678, 1678.

Trotskyism, interpretation of MARXISM conceived by LEON TROTSKY. In contrast to STALIN, who tried to create "socialism in one country", Trotsky argued that there must be "permanent revolution" in all the industrialized countries together.

Trotter, Lily. See JACANA.

Troubadours, poets in the s of France from the 11th to the 14th century who wrote about love and chivalry. Their poems were sung by wandering minstrels called jongleurs. The name comes from the Provençal *trobar* for "to find" or "to invent". They wrote in the Provençal tongue, the *langue d'oc*.

Troughs, in meteorology, areas of low atmospheric pressure, usually extensions to a DEPRESSION. The opposite are ridges of high pressure.

Trout, any fish of the salmon family (Salmonidae). Trout are good food fish and favourites with anglers. There are three types of the single species of European trout (*S. trutta*), each with a different name. The brown or river trout, found in streams and pools, is small and dark, and does not migrate. The lake trout, of rivers and lakes, is a larger, paler version, and is sometimes migratory. The large silvery sea trout is definitely migratory and is sometimes confused with the salmon. Length: to 1m (3ft); weight: to 13.5kg (30lb). American trout are equally varied and include the rainbow trout (*S. gairdneri*), with a longitudinal red stripe. See also pp.55, 63, 346, 740-741, 742, 743.

Trouveres, aristocratic poet-musicians of France of the 12th and 13th centuries, similar to TROUBADOURS. Their songs, many of which have survived, deal with chivalry, war, politics and religion. The system of notation used indicates only the pitch and not the metre or note values, and so the songs are difficult to interpret.

Trovatore, Il (1853), four-act opera by Giuseppe VERDI with libretto by Salvatore Cammarano, based on a play by Antonio Gutierrez. Set in 15th-century Spain the plot involves the unravelling of complicated family relationships, and the resultant emotional climaxes are vigorously treated in the music, which is stylistically similar to the earlier opera *Rigoletto*.

Troy, or Ilium, ancient city in NW Asia Minor whose legend is an important theme in Greek literature. The extensive ruins excavated by Heinrich SCHLIEMANN in the 1870s and Wilhelm Dörpfeld in the 1890s have shown nine principal periods when houses were built on the same site, between 3000 and 1100bc (when it was probably abandoned) and between 700 bc and 400 ad. Troy VIIa is probably that of King Priam depicted by HOMER in his *Iliad*. From its early settlement Troy was an important point on the trade route between Europe and Asia.

Troyat, Henri (1911-), French novelist, b. Russia as Lev Tarassov. He left the civil service to devote himself to writing and won the Goncourt prize in 1938 for his third novel *L'Araignée*.

Troyes, Chretien de (fl. 1170), French poet, author of the earliest extant Arthurian romances, which were the source of much later similar romances, such as *Le Morte Darthur* by MALORY. Troyes' work includes translations of OVID and the romances *Erec* (after 1155), *Cligès* (c. 1176) and the unfinished *Perceval* (*Le Conte du Graal*), which contains the earliest known reference to the legend of the Holy Grail.

Troyes, Treaty of (1420), truce in the

HUNDRED YEARS WAR between CHARLES VI of France, HENRY V of England and PHILIP of Burgundy. By its terms Henry married Charles's daughter, Catherine, and was recognized as the heir to the French throne. He died before he could succeed to the throne. See also p.1347.

Trubetskoi, Prince Pavel (1866-1938), Russian sculptor who lived also in Paris, the USA and Italy. Strongly influenced by RODIN, his best works date from the early 1900s when he produced IMPRESSIONISTIC portraits and animal statuettes.

Trucial States, former name for the UNITED ARAB EMIRATES, seven emirates on the Persian Gulf: Abu Dhabi, Ajman, Dubai, Fujairah, Ras al-Khaimah, Sharjah and Umm al-Qaiwain. The name "trucial" signifies the truces signed with Britain in 1820 (and a later agreement of 1892), by which the emirates accepted British protection and British control of their defence and foreign policies. They joined together in the UAE when Britain withdrew from the Persian Gulf in 1971.

Trudeau, Pierre Elliott (1919-), Canadian politician. He was elected a Liberal member of Parliament in 1965 and was appointed Minister of Justice and Attorney General in 1967. He succeeded Lester PEARSON as party leader and as Prime Minister in 1968, and during his administration he promoted economic and diplomatic independence for Canada. He recognized the People's Republic of China in 1970 but in that year had temporarily to impose martial law to combat French separatist terrorism. The Liberal Party lost its majority in 1970, but Trudeau continued to govern with the aid of the NEW DEMOCRATIC PARTY. In 1974 he was re-elected with Liberal support alone, but lost to the Progressive Conservatives in 1979. He won the 1980 election outright, so becoming premier once more. See also p.1615.

True Intellectual System of the Universe, The, a critique of atheistic materialism by Ralph CUDWORTH.

True Levellers. See DIGGERS.

Trueman, Frederick Swards ("Freddy") (1931-), British cricketer who played for Yorkshire and England. He was a fast bowler, but also a first-class fielder and a fair batsman. He was the first bowler to take more than 300 wickets in Test matches. He had taken 307 at an average of 21.57 when he retired from Test cricket in 1965.

Truffaut, François (1932-), French film director. His first feature film, *The 400 Blows* (1959), won a prize at the Cannes Film Festival, and Truffaut came to be associated with the NOUVELLE VAGUE. His other films include *Shoot the Pianist* (1960), *Jules and Jim* (1961), *Day for Night* (1973) and *Pocket Money* (1976). See also pp.1761, 1761.

Truffle, any of several species of ASCOMYCETE fungi that grow underground, mostly among tree roots. Most are edible and are highly prized delicacies. Truffles range in size from that of a pea to that of a potato. Found in Europe, particularly France, and in parts of the USA, they are hunted for by trained pigs and dogs that can scent them out. Family Tuberaceae.

Trujillo, city in NW Peru, approx. 530km (330 miles) NNW of Lima. Located in a fertile coastal region, it is a commercial and export centre, processing sugar cane and producing textiles and cocaine.

Truman, Harry S. (1884-1972), 33rd President of the USA (1945-53). He took office in April 1945, just before the end of WWII and faced the problems of post-war readjustment, when he succeeded Pres. Franklin D. ROOSEVELT. The decisions he took are still controversial: he ordered the first atomic bombings of Japanese cities and effectively ended the war with Japan; he introduced the TRUMAN DOCTRINE, the MARSHALL PLAN, the NORTH ATLANTIC TREATY ORGANIZATION and organized the NATO Berlin airlift - all intended to challenge the real or imagined threat of Soviet Communism. The cold war pervaded his two terms in office and, at home, Americans watched the witch-hunting trials instigated by Sen. Joseph MCCARTHY on their television sets. Truman's last years in

office were occupied with the KOREAN WAR. See also pp.1701, 1701, 1716-1717, 1716-1717, 1722, 1742, 1742, 1748-1749, 1748-1749, 1792.

Truman Doctrine (March 1947), declaration of US foreign policy by Pres. Harry TRUMAN. It stated that the USA would act to prevent the overthrow of democratic institutions by totalitarian governments anywhere in the world. Although the statement was universal in scope, Truman was specifically referring to the protection of Greece and Turkey against Soviet expansion. The doctrine became the primary statement of US policy in the COLD WAR.

Trumbull, John (1756-1843), US painter of portraits and historical subjects. In 1817 he was commissioned to paint a series of scenes from the American War of Independence for the Capitol in Washington, DC, which are severely classical in style. His best talent is displayed in his miniature portrait studies.

Trumpet, brass wind instrument of ancient origin. It has a cylindrical bore in the shape of a flattened loop and three piston valves, added after about 1820 to regulate the pitch. It became an important ceremonial instrument in the 15th century and by the late 17th century had become a standard orchestral instrument. See also pp.1580-1581, 1580-1581.

Trumpeter swan, large black-billed swan with a loud bugle-like call. It is found mainly in national parks in Canada and the NW USA where its numbers continue to increase, having reached near-extinction in the wild. It is one of the heaviest living flying birds. Length: to 1.7m (5.5ft); wingspan: to 3m (10ft); weight: to 17.2kg (38lb). Family Anatidae; species *Cygnus cygnus buccinator*. See also p.80.

Trunkfish, marine fish that lives in temperate and tropical waters. Its body is almost triangular when seen from the front, with a broad flat ventral region tapering to a narrow dorsal region; it has fused scales which form hexagonal bony plates. Length: to 50cm (20in). Family Ostracientidae; genus *Lactophrys*.

Truss, in engineering and building, structural member made up of straight pieces of metal or timber formed into a series of triangles lying in a vertical plane. The triangles resist distortion through stress, making the truss capable of sustaining great loads over long spans. It was probably first used almost 5,000 years ago in lake dwellings.

Truss, in medicine, device made of metal, elastic, leather, plastic or canvas and worn to prevent a HERNIA from protruding through the abdominal wall.

Trust, in law, situation in which one person (the TRUSTEE) holds property for the benefit of another (the beneficiary). Trusts are generally created by a legal instrument such as a deed or a will.

Trustee, in law, the person holding property in TRUST on behalf of the beneficiary.

Trustee, The Public, British official who headed the Public Trust Office and was responsible for the administration of wills and TRUSTS placed under his care. The office was established in 1908, but was taken over by the Treasury in 1972 because of a decline in business.

Trustee Savings Bank, savings banks operated on a non-profit basis, on behalf of investors. First established in Britain in 1810, they now offer a comprehensive range of banking facilities. The largest is the Post Office Savings Bank.

Trust Territories, countries administered by the UNITED NATIONS as a continuation of the MANDATE system of the LEAGUE OF NATIONS. They are former colonial acquisitions of defeated nations which did not have either the inclination or means to become self-governing. The purpose of the trustee system is to prepare them for self-government. After WWII the United Nations established 11 trust territories (Nauru, New Guinea, the Pacific Islands, Ruanda-Urundi, Somaliland and Western Samoa; part of the Cameroon and Togoland was administered by France and the remainder by Britain who also administered Tanganyika). With the exception of

the Pacific Islands, all have since either become independent or passed to the control of other countries.

Truter, Sir Johannes Andreas (1863–1865). South African jurist and administrator. He was appointed secretary to the Court of Justice (1793) and under the Batavian Republic acted as advisor to the Governor, Gen. Janssens. He continued as an administrator under British rule and became President of the Court of Justice in 1812.

Truth, accurate representation of reality, the opposite of falsehood. Truth in various forms has been a major object of philosophical enquiry; ONTOLOGY is the study of the true existence of reality and EPISTEMOLOGY of the correspondence between a concept and reality.

Trypanosome, one of a genus of animal flagellate PROTOZOA that are mainly parasitic in the blood of vertebrates. *Trypanosoma gambiense* is an elongated cell, with long, undulating membrane and flagellum along one side. It is harboured by African game, carried by the TSETSE FLY, and injected into the blood of humans, causing SLEEPING SICKNESS. See also p.2.

Trypanosomiasis, whole array of debilitating disorders in man and domestic animals, caused by several species of parasitic flagellate protozoans of the genus *Trypanosoma*. The vector is usually a fly or other insect. Examples are human sleeping sickness and Chagas' disease, and nagana and surra in cattle and horses. See also p.1080.

Trypsin, ENZYME that breaks down PROTEINS, particularly those in blood and milk, into PEPTIDES to aid in absorption during the digestive process in the small intestine. See also p.160.

Tryptamine, organic chemical compound, formula $C_{10}H_{12}N_2$. Among its many metabolic derivatives is 5-hydroxy tryptamine, or SEROTONIN, which affects (among other things) mental coherence.

Tryptophan, amino acid, first isolated in 1902, which is necessary for the synthesis of the anti-PELLAGRA vitamin nicotinic acid. Tryptophan itself cannot be synthesized by animals and is therefore an essential AMINO ACID that must be supplied in the diet. It is found in most natural PROTEINS, but some CEREALS, notably MAIZE and SORGHUM, contain particularly low levels.

Tsar, name of the rulers of Russia, first adopted by IVAN the Terrible in 1547. It is a corruption of *Caesar*. In 1721 PETER I changed the official title to "emperor", but "tsar" continued to be used in popular language until 1917.

Tsatsos, Konstantinos (1899–), Greek philosopher, lawyer and politician, President of Greece from 1975. After working as professor of law at Athens University (from 1932), he became a member of parliament (1946–50, 1963–67). He held various ministries before becoming President.

Tschakovsky, Peter Ilyich. See TCHAIKOVSKY. PETER ILYICH.

Tsedenbal, Yumjaagiyn (1916–), Mongolian head of state. Secretary-General of the Central Committee of the Mongolian People's Revolutionary Party from 1940 to 1945; he became First Secretary in 1958 and Chairman of the Presidium, Mongolia's governing body, in 1974.

Tsetse fly, any of several species of blood-sucking flies that live in Africa. Larger than a housefly, it has a grey thorax and a yellow to brown abdomen. Females commonly seek large animals such as livestock, transmitting nagana, a disease of cattle; almost 80% of flies that bite human beings are male, carrying SLEEPING SICKNESS. Length: to 16mm (0.6in). Order Diptera; family Muscidae; genus *Glossina*. See also p.43.

TSH. See THYROID STIMULATING HORMONE.

Tshombe, Moïse Kapenda (1919–69). Congolese military leader and politician. He became involved in the government of KATANGA (renamed Shaba) and formed a separate nation when the rest of the Congo became independent in 1960. After intervention by the United Nations in 1963 he fled to Europe, but returned as premier of a united Congo (now ZAIRE) in

1964. He was dismissed in 1965 and went into exile. In 1967 he was kidnapped and taken to Algeria, where he was kept under house arrest until his death in 1969.

Tsiolkovsky, Konstantin Eduardovich (1857–1935). Russian scientist who provided the theoretical basis for space travel. The first to stress the importance of liquid propellants in rockets in 1898, he also proposed the technique of multi-stage rockets to overcome gravity and laid down the principles of space stations. See also pp.1022, 1026, 1026, 1040, 1041.

Tsin Dynasty, Chinese dynasty, also known as the Chin Dynasty. Established in 265 by Chin Wu Ti (Ssu-ma Yen) (the Martial Emperor) and known in history as the West Chin Dynasty, it was destroyed in 316 by the Hsiung-nu or HUNS and its survivors fled to the Yangtze to establish the East Tsin Dynasty (317–419), one of the Six Dynasties in S China. The migration of the northern aristocracy shifted the centre of Chinese civilization to the S and inaugurated an outstanding period of cultural activity.

Tsinghai (Qinghai), province in N China; the capital is Sining (Xining). It is a mountainous region and the source of some of Asia's greatest rivers, including the HUANG HO (Yellow), YANGTZE (Changjiang) and MEKONG. There is farming of spring wheat, barley and potatoes, and stock rearing; the province is famous for its breeding of horses. The extraction of iron ore, coal, oil, salt and potash is important. It passed to China in 1924 and fell to the Communists in 1949. Area: 721,280sq km (278,486sq miles). Pop. 2,000,000.

Tsingtao, port city in Shantung province, SE China, on the Yellow Sea. The Japanese held Tsingtao from 1914 to 1922 and from 1938 to 1945. It is a major port of China, and has rail links with the rest of the country. Products include textiles, iron and steel, chemicals, tyres and metal goods. Pop. (1975 est.) 1,391,000.

TSR2, British experimental tactical, strike and reconnaissance aircraft designed to penetrate radar defences in high-speed, low-level flight. The first of these aircraft flew in 1964, but the type was scrapped in 1965 for lack of finance.

Tsunami, wave caused by a submarine earthquake, subsidence or volcanic eruption. Tsunamis spread radially from their source in ever-widening circles. In mid-ocean they are shallow, 0.3–6m (1–2ft) high, and are rarely detected. In shallower water they build up in force and height, crashing on shore and causing enormous damage. Tsunami is a Japanese word; such waves are also called seismic sea waves, but tidal wave is an erroneous term for them. See also pp.202, 236, 237.

Tsushima, island in S Japan, in the Korea Strait. It was the scene in 1905 of the major naval battle of the RUSSO-JAPANESE WAR. Fishing is the chief occupation. Area: approx. 699sq km (270sq miles).

Tuamotu (Low Archipelago), island group in French Polynesia, in the S Pacific Ocean, ESE of the Society Islands and NE of the Tubuai Islands. Rangiroa is the largest island. The group is made up of approx. 80 small coral islets, which were discovered in 1606 by the Spanish explorer Pedro Fernandes de Queirós. The islands were annexed to France in 1881 and are now administered from Tahiti. Products: coconuts, copra, pearl, shell. Area: 857sq km (331sq miles). Pop. 7,660.

Tuareg, fiercely independent BERBER people of Islamic faith, who inhabit the desert regions of North Africa. Their matrilineal, feudal society is based on nomadic pastoralism, and traditionally maintains a class of black non-Tuareg serfs. Tuareg males wear blue veils, while the women are unveiled. See also p.1830.

Tuatara, nocturnal lizard-like reptile of New Zealand; it is the sole surviving member of the primitive order Rhynchocephalia. It is brownish in colour and has an exceptionally well-developed PINEAL BODY, thought to be a vestigial third eye. Length: to 70cm (2.3ft). Species *Sphenodon punctatus*. See also pp.66, 327.

Tuba, large brass musical instrument, the lowest instrument of the orchestral brass family. The tuba has a conical bore, a cupped mouthpiece and is oblong in shape. It is held vertically with the bell upward and played with normally four or five valves. See also pp.1580–1581.

Tube, electron. See ELECTRON TUBE.

Tube, X-ray. See X-RAY TUBE.

Tuber, in plants, the short, swollen, sometimes edible underground stem, modified for the storage of food as in the potato, or swollen root (eg dahlia). In stem tubers new plants develop from the buds, or eyes growing in the axils of the scale leaves. Tubers are propagated by sections containing at least one eye. See also pp.682–683.

Tuberculosis, infectious disease caused by the bacteria *Mycobacterium tuberculosis* and *M. bovis*. It most often affects the lungs, but may involve the bones and joints, the skin, the lymph nodes, intestines and the kidneys. There are several drugs used to treat this disease, chiefly rifampin, isoniazid and para-aminosalicylic acid (PAS). Preventive measures, which include screening (by chest X-ray and tuberculin testing), pasteurization of milk, and isolation of cases, have controlled the disease successfully in many countries. It remains a major cause of death in countries where such measures are not taken. See also pp.1064, 1065.

Tuberose, Mexican perennial plant grown in the S USA. The white, sweet-scented flowers are used in perfumery. Height: to 91cm (3ft). Family Amaryllidaceae; species *Polianthes tuberosa*.

Tubifex, also called bloodworm or sludge worm, any of several species of freshwater worms that bury themselves in the silt at the bottom of the water. They are commonly used as fishing bait, or to feed fish in aquariums. Family Tubificidae; genus *Tubifex*. See also pp.19, 328–329.

Tubidentata. See AARDVARK.

Tubman, William Vacanarat Shadrach (1895–1971), Liberian president (1944–71). A descendant of American slaves, he served as a legislator and associate justice of the supreme court (1937–43) before becoming President in 1944.

TUC (Trades Union Congress), permanent association of British trade union principles and gradually acquiring a permanent staff and a limited authority over its member unions. Each year it holds an annual assembly of delegates who discuss common problems. Most of its members are skilled workers. Since 1889 any union can apply for membership. It formed the Labour Representation Committee in 1900, renamed the LABOUR PARTY in 1906, which sponsored candidates for Parliament until 1918, afterwards becoming a national political party. Membership of the TUC was 1,000,000 in 1874, doubling by WWI and numbering 10,000,000 in the mid-1970s. See also pp.1571, 1644, 1692–1693, 1693, 1695.

Tucson, city in SE Arizona, USA, 165km (103 miles) SE of Phoenix, on the Santa Cruz River. Tucson is the seat of the University of Arizona (1885). Industries: aircraft parts, meat packing, textiles, mining, electronics, tourism. Pop. (1980) 331,506.

Tucu-tucu, any of several species of squirrel-like burrowing rodents of the grasslands of SW South America. Dark brown to a creamy buff, it digs an extensive system of burrows and eats the roots and stems of plants. Length: to 25cm (10in). Family Ctenomyidae; genus *Ctenomys*. See also p.300.

Tudor, Antony (1908–), British dancer, teacher and choreographer b. William Cook. His ballets such as *Adam and Eve* (1932) and *The Planets* (1934) helped to establish the reputation of Ballet Rambert. He was staff choreographer (1940–50) and Associate Director (1974–) of the American Theater Ballet and worked closely with many other national companies.

Tudor, Mary (1516–58), Queen Mary I of England (r.1553–58), daughter of HENRY

VIII and CATHERINE OF ARAGON. She remained a Roman Catholic and attempted by persecution (which earned her the name "Bloody Mary") to effect a COUNTER-REFORMATION in England. In 1554 she married PHILIP II of Spain. See also pp.1404–1405.

Tudor, House of, English dynasty that ruled between 1485 and 1603. The family originated in Wales; Owen Tudor (d.1461) married the widow of HENRY V of England and their eldest son, Edmund, married a great-granddaughter of JOHN OF GAUNT. Their son Henry defeated RICHARD III at the Battle of Bosworth Field in 1485 to win the English throne and was proclaimed HENRY VII. By marrying Elizabeth of York he attempted to end the Wars of the ROSES. His second son succeeded him to the throne as HENRY VIII in 1509, while his daughter Margaret married JAMES IV of Scotland, a liaison that led to the STUART succession to the English throne in 1603. Henry VIII was succeeded by his son, EDWARD VI; his sister Mary's granddaughter Lady Jane GREY, and his two daughters MARY and ELIZABETH I. Following the latter's death without an heir in 1603, the throne passed to JAMES VI of Scotland. The House of Tudor produced a series of outstanding monarchs, and its period of rule was decisive for the growth of royal authority and for the emergence of England into a modern nation state. See also pp.1400–1401, 1404–1405, 1408, 1415, 1795.

Tuesday, third day of the week. The name is derived from the Old English *Tiwas daeg*, the day of *tiw* (Tyr), the Germanic God of war.

Tufa, deposit of calcium carbonate formed by precipitation from lime-rich water, eg in a limestone cavern. The term is also applied to deposits of silica from hot springs. See also pp.218–219.

Tuff, SEDIMENTARY ROCK made up of particles of IGNEOUS ROCK from volcanic eruptions. The particles vary in size from fine to coarse but are generally smaller than 4mm (0.16in), and may be either stratified or heterogeneous in their arrangement.

Tu Fu (712–70), Chinese poet of the Tang Dynasty who wrote about such topics as war, corruption and patriotism. His poetry reflects his troubled personal life and laments the corruption and cruelty that prevailed at court and the sufferings of the poor. See also p.1260.

Tug-of-war, athletic contest of strength involving two teams of eight men and a rope. A line or marker separates the teams. The object is to pull the opposing team across the line. Teams are graded according to their combined weight. Tug-of-war was included in the Olympic Games from 1900 to 1920.

Tui, Chinese bronze vessel made during the late Chou dynasty (c.600–221 BC). It is composed of two hemispherical bowls, each of which has handles and three legs. Often decorated with inlay, the bowls fit together to form a closed sphere, which may be used to hold food.

Tui, New Zealand honeyeater, considered among the finest of their forest songbirds. It has two white patches of curly feathers at the throat and is a competent mimic of other birds.

Tuke, William (1732–1822), English Quaker philanthropist, important pioneer in the humane treatment of the mentally disturbed. See also p.1108.

Tula, or Tollen, TOLTEC ceremonial centre 73km (45 miles) N of Mexico City, which flourished 900–c.1206. It was a relatively large complex containing a central plaza, pyramids and ball-court, and may have been the Toltec capital.

Tulip, hardy bulbous plant native to Europe, Asia and North Africa. Tulips have long, pointed leaves growing from the base and elongated cup-shaped flowers that can be almost any colour or combination of colours. Family Liliaceae; genus *Tulipa*.

Tulip tree, large, broad-leaved tree of the MAGNOLIA family and a misnomer for other species of magnolia. It is native to the USA and has large, TULIP-like, green yellow flowers, each comprised of six

Tull, Jethro

petals which are orange at the base, and bears cone-like clusters of winged fruits. Its pale yellow wood is used for furniture and veneers. Height: to 58m (190ft). Family Magnoliaceae; species *Liriodendron tulipifera*. See also p.306.

Tull, Jethro (1674-1741), British agriculturist who influenced agricultural methods through his writings which included *The Horse-Hoeing Husbandry* (1733). He invented a mechanical drill for sowing in 1701 and advocated the use of manure and thorough tilling during the growing period. See also pp.1464, 1464.

Tumbleweed, plant that characteristically breaks off near the ground in autumn and is rolled along by the wind. The common western US tumbleweed is usually white-stemmed and has pale flowers crowded into the leaf axils. Height: to 51cm (20in). Family Amaranthaceae; genus *Amaranthus*.

Tumour, any uncontrolled, abnormal proliferation of new tissue from pre-existing cells that has no useful function in terms of the body as a whole. Tumours fall into several types and are classified as either benign or malignant. See also pp.1062, 1063, 1072.

Tumulus, or barrow, grave mound of prehistoric or early historic peoples. Excavation of barrows has developed into a study of construction and funerary rites. The two most prolific types are the long barrow from the Neolithic period and the round barrow from the Bronze Age. See also p.770.

Tuna. See TUNNY.

Tunbridge Wells, county district in SW Kent, England; created in 1974 under the Local Government Act (1972). Area 331sq km (128sq miles). Pop. (1974 est.) 95,000.

Tundra, Lapp term for the treeless, level or gently undulating plain characteristic of arctic and subarctic regions. The tundra is marshy with dark soil that supports mosses, lichens and low shrubs. It has a permanently frozen subsoil known as permafrost. See also p.324.

Tung Chung-shu (c.179 BC-104 BC), exponent of the YIN-YANG philosophy with which CONFUCIANISM became merged in China in the 2nd century BC.

Tung oil, pungent, yellow, drying oil which is obtained chiefly from the tung tree (*Aleurites fordii*) of China. It is one of the main industrial oils and contains a great amount of free fatty acids and other contaminants such as RESINS and STEROLS. It is used in the manufacture of paints and varnishes and in the waterproofing of linoleum. See also p.713.

Tungsten, or wolfram, metallic element (symbol W) of the third transition series, first identified in 1779 and isolated in 1783. Its chief ores are WOLFRAMITE and SCHEELITE. Tungsten has the highest melting point of all metals and is used for filaments in electric-light bulbs and electron tubes (valves). It is also used in high-speed tool steels and other special alloys. The sulphide is used as a lubricant. Chemically, tungsten is fairly unreactive; it oxidizes only at high temperatures. Properties: at no. 74; at wt. 183.85; s.g. 19.3; m.p. 3,410°C (6,170°F); b.p. 5,660°C (10,220°F); most common isotope W^{184} (30.64%). See also TRANSITION ELEMENTS.

Tungsten carbide, hard, inert, grey powder, formula WC, used for making dies, carbide tools and armour-piercing shells. It is one of the strongest structural materials. It is manufactured by heating tungsten and lamp-black (powdered carbon) in an electric furnace. Properties: s.g. 15.6; m.p. 2,780°C (5,036°F).

Tungsten processing, separation of the metal TUNGSTEN from its chief ores, scheelite and wolframite. The ore is fused with sodium carbonate to yield sodium tungstate, which is treated with acid to produce tungstic acid. The latter is washed and dried to yield tungsten oxide (WO_3), which is reduced by hydrogen to the pure metal powder. This is moulded and pressed into tungsten bars.

Tungus, Ural-Altaic speaking, Mongoloid people who inhabit E Siberia. Consisting of two main groups, the Evenki and Lamuts, they practise reindeer herding,

fishing and agriculture. The Tungus are related to the MANCHUS.

Tunicata, Subphylum of CHORDATA including SEA SQUIDS.

Tunis, capital city of Tunisia, N Africa, between the two salt lakes of Tunis and Subkhat as-Sijumi (with canal access to the Gulf of Tunis). It became the capital of the country under the Hafsid dynasty (13th-16th centuries) and in later years was famous as a centre of piracy. Tunisia was occupied by the French from 1881 to 1956. The port facilities of Tunis were greatly improved during the late 1960s. The modern city's products include olive oil, carpets and textiles; tourism is also important. Pop. (1975) 505,404.

Tunisia, small republic in N Africa. Formerly a French protectorate, it became independent in 1956. Farming employs approx. 60 per cent of the people; olive oil, wine, fruit and vegetables are the chief farm exports. Mineral deposits include oil, phosphates, iron ore and lead. Manufacturing industries are increasing, and tourism is an important source of income. The capital is Tunis. Area: 164,150sq km (63,378sq miles). Pop. (1978 est.) 6,030,000. See p.2151.

Tunnage and Poundage, subsidies voted by Parliament to the Crown in medieval England, originally separate but after 1350 voted together. Tunnage was a duty on the import of tunns of wine, poundage a charge of 3d. in the pound on the import and export of all goods. From 1415 they were voted for life, until the LONG PARLIAMENT limited the grant to two months in 1641.

Tunnelling, digging of underground passages without removing the overlying rock or soil. Its methods vary with the nature of the material to be cut through. In soft earth it is necessary to shore up the tunnel to prevent its collapsing. Tunnelling through hard rock requires blasting. Compressed air drills were first used on the Mont Cenis Tunnel, 14km (8.5 miles) long, which was opened in 1871. For tunnelling under rivers the shield was developed. This device was composed of metal cylinders which fitted around the walls of the tunnel, the forward end being closed by a diaphragm plate. The shield was pushed forward into the earth, headings being cut through openings in the forward end, and the tunnel walls extended within the cylinder. Modern excavators drill large diameter tunnels rather like the process of using a brace and bit. See also pp.530-531.

Tunney, James Joseph ("Gene") (1898-1978), US boxer. Light-heavyweight champion of the USA (1922-1923), he defeated Jack DEMSEY in 1926 for the world heavyweight championship. He successfully defended his title against Dempsey in 1927 and retired undefeated in 1928. He subsequently became a successful business man.

Tunny, large marine fish related to MACKEREL, found in tropical and temperate seas; often known by its American name, tuna. An important commercial fish, it has a blue-black and silvery streamlined body with a large, deeply divided tail. Length: to 4.3m (14ft); weight: to 810kg (1,800lb). Types of tunny, or tuna, include bluefin, yellowfin, albacore and skipjack. Family Scombridae. See also pp.62, 340, 744, 745.

Tupac Amaru (c.1742-1781), b. José Gabriel Condorcanqui, leader of an Indian revolt in colonial Spanish America (1780-81). Tupac's army of Peruvian Indians numbered more than 10,000 and many died before the revolt was suppressed and its leader brutally executed.

Tupou IV, King Taufa'ahau (1918-), King of Tonga. The eldest son of Queen SALOTE TUPOU III, he was Premier from 1949 to 1965 and succeeded his mother to the throne when she died in 1965. He was crowned in 1967.

Turaco. See TOURACO.

Turandot (composed 1924), three-act opera by Giacomo PUCCINI based on a play by Carlo Gozzi, with libretto by Giuseppe Adami and Renato Simoni. The score, unfinished at the time of Puccini's death, was completed by Franco Alfano. It was

first performed in Milan in 1926. It has an exotic setting in ancient China, fairy-tale elements and a heroic love story.

Turbine, rotary engine that converts the energy of a moving fluid (eg water, steam, or air) into mechanical energy. The basic element in a turbine is a wheel or rotor with blades or buckets arranged on its circumference such that the moving fluid exerts tangential force, which turns the wheel. The rotation of the rotor is transferred through a drive shaft to do work, eg drive a propeller or electricity generator. See also pp.420-421, 424-425, 427-429, 519.

Turboprop engine, TURBINE engine that developed from, and is more efficient than, the TURBOJET ENGINE. It has a compressor, which forces air from the intake into the combustion chamber, and a TURBINE, which is driven by the exhaust gases and drives the compressor. Extra thrust is provided by large blades at the front, driven by the turbine, which push air along a bypass round the combustion chamber and into the tailpipe. See also p.421.

Turbojet engine, aircraft ENGINE (a type of gas TURBINE) that produces power through the reactive force of expanding gases. Air is taken in at the front through a compressor, forced into a combustion chamber, mixed with fuel and burned, producing a rush of expanding gas that propels the aircraft in a direction opposite to that of the rapid outflow. To maintain the cycle the expanding gas also turns a TURBINE which drives the air compressor. See also TURBOFAN ENGINE; pp.427, 519.

Turboprop engine, aircraft ENGINE that has a propeller (airscrew) driven by a gas TURBINE through gears. The turbine compresses air which is mixed with fuel and burnt in a combustion chamber, producing exhaust gases which drive the turbine, compressor and propeller. See also TURBOFAN ENGINE; TURBOJET ENGINE; pp.421, 519.

Turbot, scaleless, bottom-dwelling, European marine FLATFISH; it is farmed in some countries. A typical flatfish, it has a broad flat body with both eyes on its grey-brown, mottled upper surface, which may also be covered in bony knobs; the blind underside is nearly white. Length: to 1m (3.3ft). Family Scophthalmidae; species *Scophthalmus maximus*. See also pp.62, 740, 741, 744, 745.

Turenne, Henri de La Tour d'Auvergne (1611-75), French general. He distinguished himself against the Bavarians in the THIRTY YEARS WAR (1618-48) and in the wars of Louis XIV. He was involved in the FRONDE (1649-51) but supported the future Louis XIV against the forces of the Prince de Condé and Spain.

Turgenev, Ivan Sergeievich (1818-83), Russian novelist, playwright and short story writer who was at his most prolific between 1850 and 1860. The novels of this period opposed social and political evils and received official disapproval. After the appearance of *Fathers and Sons* (1862) he left Russia. See also p.1575.

Turgot, Anne Robert Jacques (1721-81), French economist. He was chief administrator for Limoges from 1761 to 1774 and controller general of finance from 1774 to 1776. His attempts to set France's fiscal house in order were unsuccessful and his January edicts of 1776 led to his downfall.

Turin (Torino), city in SW Italy, 125km (78 miles) SW of Genoa, on the River Po; capital of Piedmont (Piemonte) region. Turin was an important Roman town. It became a Lombard duchy from 590 to 636, and recognized the supremacy of Savoy in 1280. From 1720 to 1861 the city was capital of the Kingdom of Sardinia. At the beginning of the 19th century Turin was a centre of the RISORGIMENTO, and from 1861 to 1864 capital of the new Italian Kingdom. The city's university dates from 1405. Turin suffered great damage during WWII. Today it is an important industrial centre and home of the Fiat and Lancia motor companies. Other industries include electronic equipment, machinery, rubber, paper, leather goods, wines. Pop. (1979) 1,160,686.

Turistcheva, Ludmila (1952-), Soviet

gymnast whose flawless performances made her the supreme competitor of the early 1970s. She won three Olympic gold medals (combined exercises 1972; team 1968, 1972), was world champion in 1970, and European champion in 1971 and 1973.

Turkey, independent state located between Europe and Asia. The Turkish straits (the Bosphorus, Sea of Marmara and the Dardanelles) link the Black Sea and the Mediterranean Sea. A variety of crops are grown on the coastal plain, wheat is produced on the w Anatolian plateau and the E part of the country is mountainous. Most of the people work in agriculture, and the rest of the economy depends on government-controlled enterprises. The capital is Ankara. Area: 780,574sq km (301,380sq miles). Pop. (1980 est.) 45,422,000. See p.2151.

Turkey, North American GAME BIRD now widely domesticated throughout the world. The common wild turkey (*Meleagris gallopavo*), once abundant in North America, was overhunted and is now protected. The male, or gobble, is often bearded. Length: 125cm (50in). The ocellated turkey (*Agriocharis ocellata*) of lowland Mexico and adjacent Central American areas has a yellow knob between its eyes, bright metallic plumage and a bare, blue, pimple-covered head and neck. Family Meleagrididae. See also pp.734, 735-737, 736.

Turkic languages, group of languages that form a branch of the Altaic family. It is divided into various classes, and its most important member is Turkish; most of the rest are spoken in the USSR.

Turkistan, or Turkestan, extensive geographical region in central Asia, including parts of the USSR (Kazakhstan, Kirgizia, Tadzhikistan, Turkmenistan and Uzbekistan) and China. The region extends from Siberia in the N to Tibet, India, Afghanistan and Iran in the S, and from the Caspian Sea to the Gobi desert. Area: approx. 2.6 million sq km (1 million sq miles).

Turkmenistan, or Turkmen Soviet Socialist Republic, constituent republic of the USSR. It officially entered the USSR in 1925. The capital is Ashkhabad. Turkomans comprise 60% of the population, the other ethnic groups being Russians, Uzbeks, Kazakhs, Tatars, Ukrainians and Armenians. Almost 90% of the land is covered by the Kara-Kum desert, parts of which are irrigated by the Kara-Kum canal. The chief crop is cotton, grown on the sides of the canal and in the Murgab and Tedzhen oases. Area: 488,100sq km (188,455sq miles). Pop. (1980) 2,800,000.

Turks and Caicos Islands, island group of the British West Indies; including more than 30 islands that are, geographically, a SE continuation of the Bahama Islands; the capital is Grand Turk. Discovered in 1512 by Ponce de León, the islands were annexed to Jamaica in 1874, and ruled by a British-appointed administrator after August 1962, assisted by an elected legislative assembly. Exports include salt, sponges and shellfish. Area: 430sq km (166sq miles). Pop. (1977 est.) 7,200.

Turku (Abo), port in SW Finland, at the mouth of the Aurajoki on the Baltic Sea; Finland's largest port. Founded in 1229, it is one of Finland's oldest cities; it was the national capital until 1812. Turku has Finnish (1922) and Swedish (1918) universities. Industries: steel, textiles, clothing, shipbuilding. Pop. (1976) 164,380.

Turmeric, herbaceous perennial plant originally found in India, and cultivated in SE Asia. The dried rhizome is powdered for use as seasoning, a yellow dye and in medicines. The plant has thick stalks, long leaves and pale yellow flowers. Family Zingiberaceae; species *Curcuma longa*. See also pp.706, 707.

Turner, Dame Eva (1892-), British dramatic soprano. She sang with the Carl Rosa company and in 1924 was engaged by TOSCANINI for La Scala, Milan, where she established herself in operas by VERDI, WAGNER and PUCCINI.

Turner, Joseph Mallord William (1775-1851), British landscape painter, the

greatest of the 19th century. His talent was acknowledged early: he was an associate of the Royal Academy at age 24 and was professor of PERSPECTIVE there from 1807 to 1838. He was always financially successful. He was a withdrawn personality and late in life became virtually a recluse. His paintings were revolutionary in their representation of light, especially of light on water. In his late works, such as *The Slave Ship* (1840) and *Rain, Steam and Speed* (1844), the original subjects are almost obscured, and form comes from the interplay of light and colour. See also pp.1579, 1579.

Turner's syndrome, hereditary condition in which the sex chromosomes are not XX as in females, nor XY as in males, but XO, the second sex chromosome being absent or dysfunctional. People with the syndrome are characteristically female in general appearance, but short in stature, sterile and with a webbed neck.

Turnip, garden vegetable best grown in cool climates. The edible leaves are large and toothed with thick midribs. A biennial, it has an edible, white, fleshy root. The seeds are used to make margarine. Diameter: 8–15cm (3–6in). Height: to 55cm (20in). Family Cruciferae; species *Brassica rapa*.

Turnpike, method formerly used in Britain to raise money to keep main roads in repair. The first turnpike act (1663) was limited to three counties, but turnpike roads became general in the 18th century, when turnpike trusts were established with power to charge TOLLS from people using the roads. In 1888 responsibility for main roads passed to the county councils and the last turnpike trust was dissolved in 1895, although tolls are still levied on certain British roads and road bridges.

Turnstone, either of two species of migratory shore birds that use their curved bills to turn over pebbles in search of food; they nest on the Arctic tundra. The vividly marked ruddy turnstone (*Arenaria interpres*) ranges widely in winter. The larger black turnstone (*A. melanoccephala*) lives mainly on the eastern Pacific coast. Family Scolopacidae. See also p.325.

Turntable, flat circular disc for rotating a gramophone record at a constant speed. See also p.642.

Turoe Stone, decorated Celtic phallic stone, of about the first century AD, found 6km (4 miles) SNE of Loughrea, in Ireland. Shaped rather like a tall beehive, it is ornamented with three-plane, abstract, curvilinear motifs common to the Celtic style. See also pp.1470, 1470.

Turpentine, or gum turpentine, sticky liquid obtained from coniferous trees; it contains ROSIN and a volatile oil. Oil of turpentine, often called merely turpentine, is obtained by DISTILLATION of the gum and is used as a paint thinner, solvent and in varnishes and lacquers.

Turpin, Dick (1706–39), British highwayman hanged for horse stealing and murder. His fame is largely derived from William Ainsworth's novel *Rookwood* (1834). His famous ride from London to York on his horse *Black Bess* is fiction.

Turquoise, blue mineral, hydrated basic copper aluminium phosphate, found in aluminium-rich rocks in deserts. It occurs as tiny crystals and dense masses, in crusts and veins, and is a popular gemstone. Hardness 6; s.g. 2.7.

Turret lathe, LATHE in which a number of cutting tools are held in a block, or turret, which can be rotated to present one or more tools to the workpiece. See also p.409.

Turtle, REPTILE found on land or in marine and fresh waters. On the evolutionary scale, turtles have the most ancient lineage of all reptiles, preceding even the dinosaurs. They have a bony, horn-covered, box-like shell that encloses shoulder and hip girdles and all internal organs. The head, neck, limbs and tail project through openings in the shell. Horny jaws, resembling those of birds, replace teeth. All lay eggs on land. Terrestrial turtles are frequently called TORTOISES and some edible species found in brackish waters are called TERRAPINS. Marine turtles usually have smaller, lighter shells. Length: 10cm–2m

(4in–7ft). There are 200–280 species in 22 families. Order Chelonia. See also pp.3, 66, 68–70, 286, 346.

Turtle dove, small slender European bird. It has light grey-brown plumage and a white-edged tail. Its voice is soft and purring. Family Columbidae; species *Streptopelia turtur*.

Tuscany, region in central Italy, on the Tyrrhenian Sea, made up of the provinces of Massa Carrara, Lucca, Pistoia, Pisa, Siena, Arezzo, Florence, Grosseto and Leghorn; the capital is Florence. Tuscany is mostly mountainous with fertile valleys particularly in the Arno River Valley and the coastal plains. Agriculture remains the most important activity; products include cereals, olives and grapes. Carrara marble is quarried in the SW and there is mining for lead, zinc, antimony and copper in the SW. Manufactures include textiles, chemicals and artisan industries. Considerable income is also derived from tourism. Area: 22,992sq km (8,877sq miles). Pop (1980) 3,600,200.

Tusk, elongated tooth, generally a CANINE, that extends outside the mouth of some vertebrates such as the WALRUS and WILD BOAR. The large tusks of ELEPHANTS are modified upper INCISORS; these have long been sought as a source of valuable ivory, resulting in depletion of the species.

Tussaud, Madame Marie (1761–1850), founder of the "waxworks" exhibition, b. France as Marie Grosholtz. She modelled wax figures in Paris, and in 1802 went to London, with her collection. The present site of the exhibition, in Marylebone Road, London, dates from 1884.

Tussock moth, any of several species of moth, the larvae (caterpillars) of which are typically covered with tussocks or tufts of long hairs; many species have stinging hairs. The larvae of most species feed on the leaves of trees and shrubs, often causing much damage. Females are commonly white and brown. *Hemerocampa leucostigma*, the white marked tussock moth, has no wings. Family Lipanidae.

Tutankhamen (r.c. 1348–1340 BC), one of the last pharaohs of the 18th dynasty of Egypt. He married the daughter of AKHENATON at the age of 10. During his eight-year reign the god AMON was restored to prominence and the capital was moved from Akhetaten back to THEBES. The discovery of his tomb in 1922, still containing most of its royal burial equipment, has made him one of the best known Egyptian pharaohs. See also p.1180.

Tutin, Dorothy (1931–), British actress. Trained at RADA, she played many major roles with the Shakespeare Memorial Theatre and the Royal Shakespeare Company and toured Russia (1958) with the former and America (1968) with the latter. Throughout her career she has also made film and television appearances.

Tutuola, Amos (1920–), Nigerian writer of great creative energy whose world is a mixture of fantasy and reality. In such books as *The Palm Wine Drinkard* (1952) he conveys a sense of the spiritual validity of the complex beliefs and legends of his countrymen. See also pp.1775, 1775.

Tuva (Tuvinskaja ASSR), administrative division in the Russian RSFSR, USSR, on the Mongolian border. Controlled by the MONGOLS from the 13th to 18th centuries, the region was part of the Chinese Empire from 1857 to 1911. It was made a Russian protectorate in 1914, annexed as an autonomous oblast in 1944 and made an autonomous republic in 1961. Cereals are grown in the lowlands and livestock (including horses, goats, reindeer and camels) is reared on the steppes. Industries include timber-milling, woodworking, leather making and food processing. Area: 170,500sq km (65,800sq miles). Pop. (1980) 269,000.

TVP, See TEXTURED VEGETABLE PROTEIN.

Twain, Mark (1835–1910), US writer, journalist and lecturer, real name Samuel Langhorne Clemens. He was among the first to write novels in the American vernacular, such as *The Adventures of Tom Sawyer* (1885) and *The Adventures of Huckleberry Finn* (1876). Both reveal

his underlying egalitarian beliefs and a strong desire for social justice. Although he is best known as a humorist his later books such as *The Mysterious Stranger* (1916), and *The Man That Corrupted Hadleyburg and Other Stories and Sketches* (1900) were bitter and pessimistic. See also pp.1566, 1772, 1772.

Tweed, rough-textured woollen cloth from which warm suits, skirts, etc. are made, particularly in Scotland. Tweed has a twill weave, in which the wool fibres are patterned diagonally. See also pp.590–593.

Tweed, river in S Scotland. It rises in the Southern uplands and flows E then NE, forming part of the England-Scotland border, to enter the North Sea at Berwick-upon-Tweed. Length: 156km (97 miles).

Tweedsmuir, Lord. See BUCHAN, JOHN.

Twelfth Night, the twelfth night after Christmas, ie 6 January. Marking the end of the Christmas season, it is a traditional time for festivals and entertainment. It is the feast of the EPIPHANY in the Christian calendar.

Twelfth Night, or What You Will (1601), romantic comedy by William SHAKESPEARE. The plot was taken through various other sources from an Italian NOVELLA by Matteo Bandello.

Twelve Tables (c.451–450 BC), laws engraved on wooden tables representing the earliest codification of ROMAN LAW. Written by *decemviri* (a committee of 10) at the probable instigation of the PLEBEIANS, they codified the existing laws and customs of ancient Rome thereby providing a measure of certainty in the administration of the law.

Twelve-tone, or twelve-note, music, post-WWI approach to composition, the introduction of which is accredited to Arnold SCHOENBERG. This new method of composition relies not on the principle of tonality, in which the tonic or keynote is the focal centre, but on the relation of the twelve notes of the CHROMATIC scale one to the other. The composer selects the order in which these notes are to be played and the resultant sequence changes with different compositions. This sequence is not always discernible by ear but is nevertheless the basis of the composition, in the same way as KEY is a fundamental consideration in tonal music. Many composers have experimented with twelve-note music; these include Anton WEBERN, Alban BERG, ERNST KLONER, Luigi DALLAPICCOLA and Hans WERNER HENZE. See also SERIAL MUSIC; pp.1755, 1755.

Twelve tribes of Israel, according to the Bible, the groups of Hebrews descended from JACOB and bearing the names of his sons REUBEN, SIMEON, JUDAH, ISSACHAR, ZEBULON, GAD, ASHER, BENJAMIN, DAN and NAPHTALI. The tribes of Manasseh and EPHRAIM were named after the sons of Jacob's son, JOSEPH. The descendants of Jacob's son LEVI, the LEVITES, not counted among the twelve, were devoted to the service of God and acquired no territory in CANAAN, but lived as a priestly class among the others.

Twentieth Century-Fox Film Corporation, US film production and distribution company. Formed in 1935 by the merger of the Twentieth Century Pictures Corporation and the Fox Film Corporation, the company soon became well known for its production of musicals, westerns and epics. These included *The Grapes of Wrath* (1940), *How Green Was My Valley* (1941) and *The Gunfighter* (1950). Fox made the first wide-screen feature, *The Robe*, in 1953 but was nearly made bankrupt by *Cleopatra* (1963). Later productions included *The Sound of Music* (1965) and *Star Wars* (1977).

Twenty Thousand Leagues under the Sea (1873), romantic adventure novel by Jules VERNE, remarkable at the time for his prediction of submarines. It was made into a successful film.

Twickenham, rugby ground at Twickenham, London, the headquarters of the Rugby Football Union. It was opened in 1909, since when it has been the home of the England rugby side. It has a capacity for 72,500 spectators.

Twins, two offspring that are born within a short time (usually minutes) of each other. See also pp.166, 1106.

Two Gentlemen of Verona (1594–95), comedy by William SHAKESPEARE. The plot is taken from Jorge de Montemayor's pastoral romance *Diana*.

Two New Sciences, Dialogues Concerning (1638), treatise by GALILEO which includes his theory of parabolic BALLISTICS, the proof of the laws of fall in a vacuum, and an outline of the scientific method as well as reiterating the results of some of his earlier experiments. It was the foundation on which Isaac NEWTON based classical MECHANICS.

Two Noble Kinsmen, The (c.1613), five-act play ascribed to William SHAKESPEARE and John FLETCHER. While many scholars attribute to Shakespeare the parts of the play that are not obviously written by Fletcher, others argue that Philip MASSINGER was Fletcher's collaborator. The main plot closely follows CHAUCER's *Knight's Tale*, while some scenes and situations are borrowed from various plays by Shakespeare.

Two Sicilies, Kingdom of the, state that united S Italy with the island of Sicily from the 15th to the 19th century. In the 11th century the area was united by the NORMANS, but it was divided in 1282 between the French Angevins and the Spanish Aragonese. In 1443 ALFONSO V of Aragon reunited the area and became King of the Two Sicilies. In 1816 FERDINAND IV of Naples (Ferdinand III of Sicily) officially merged the kingdoms to become Ferdinand I of the Two Sicilies. In 1861 the kingdom was incorporated into the new Kingdom of Italy. See also pp.1588, 1589.

Two stroke cycle, power cycle of small petrol engines such as those of small motor cycles and lawn mowers. The upward (compression) stroke of the piston compresses a mixture of air and petrol in the upper part of the cylinder, where it is exploded by an electrical spark while more mixture is drawn into the lower part of the cylinder. The downward (power) stroke of the piston uncovers an exhaust port for the escape of the burned gases, and also admits unburned mixture from the lower to the upper cylinder, ready for the next upstroke. See also p.421.

Two-stroke engine. See ENGINE.

Tyburn, old name for a part of the Marylebone district of London, named after the river which ran underground from Hampstead to the River Thames at Westminster and supplied London with water. Tyburn gallows, the chief public hanging place in London from the 12th century to 1783, was at the present Marble Arch.

Tyche. See FORTUNA.

Tycho, crater in the southern hemisphere of the Moon named after the astronomer Tycho BRAHE. The crater has a system of brilliant rays radiating from it, and is one of the most prominent surface features to be seen from Earth. Tycho is 86km (54 miles) in diameter and has massive walls. See also pp.929, 933, 935, 937, 937.

Tyler, John (1790–1862), tenth US President (1841–45). In 1840 the Whigs chose Tyler as vice-presidential candidate for William Henry Harrison who died soon after inauguration, and Tyler became the first Vice-President to succeed to the presidency.

Tyler, Wat (d. 1381), English leader of the PEASANTS' REVOLT. He was chosen leader of the rebels in Kent at Maidstone, and led their march on London. He was eventually killed by the Lord Mayor of London while parleying with RICHARD II. His death marked the end of the revolt. See also pp.1348, 1349, 1349.

Tylor, Sir Edward Burnett (1832–1917), British anthropologist, often called the founder of cultural anthropology. See also pp.1827, 1828.

Tympanum, in classical architecture, the decorative stonework or masonry found beneath the arch of a doorway or window, or within an arcade on a wall. It usually rests on a lintel and as its shape is defined by the shape of the arch, the tympanum has changed in style and design with different architectural periods.

Tyndall, John

Tyndall, John (1820–1893), Irish physicist who demonstrated that the blue colour of the sky is due to the scattering of light by minute particles of dust. He also studied the magnetic properties of crystals, and light diffusion by dust and large molecules, an effect which bears his name. By 1881 he had helped disprove the theory of spontaneous generation by showing that food does not decay in germ-free air.

Tyndale, William (c.1494–1536), British religious reformer and Bible translator. He started printing an English version of the Bible in Cologne in 1525 but, because of harassment, had to complete it in Worms. Despite opposition from Thomas More and others, he maintained an output of vernacular scripture and also wrote numerous Protestant works. He was eventually captured and burned at the stake near Brussels.

Tyne, name of two rivers in Britain. One is formed in NE England at the confluence of the North Tyne (which rises in the Cheviot Hills) and the South Tyne (which rises in Cumbria) and flows E through Newcastle to enter the North Sea near Tynemouth. Length: (from confluence) 48km (30 miles). The second Tyne rises near Borthwick in SE Scotland and flows NE to enter the North Sea near Dunbar. Length: 45km (28 miles).

Tyne and Wear, county in NE England, formed in 1974 from parts of the former counties of NORTHUMBERLAND and DURHAM, and including the former county borough of Newcastle-upon-Tyne, which is the administrative centre of the new county. Area: 540sq km (208sq miles). Pop. (1976) 1,182,900.

Tynwald, court of the Isle of Man. The Government consists of a Lieutenant-governor known as the Lord of Man, a legislative Council (upper house) and the legislative House of Keys (lower house). The two legislative bodies join for some matters to form the Court of Tynwald. All laws passed by the Court are subject to the Royal Assent.

Typesetting, part of the printing process in which metal or other type is set or composed into lines, paragraphs and pages. In early printing, wooden or metal type was set by hand. In modern metal type processes, the LINOTYPE machine casts a complete line of molten type metal into a mould, and the MONOTYPE machine casts individual letters and spaces and arranges these as lines. See also PHOTOSetting.

Type metal, alloy of lead with from 24–12% of tin and 24–25% of antimony used for printing type. Both tin and antimony lower the melting temperature, which is usually between 240° and 250°C (460–475°F). Antimony also hardens the alloy and enhances its moulding properties reducing shrinkage during solidification.

Typhoid fever, acute, sometimes epidemic communicable disease marked by fever, chills, prostration, enlargement of the spleen, inflammation of the intestinal tract, and the eruption of pink spots. It is caused by *Salmonella typhi* which is transmitted by contaminated water, milk and food. Inspection of water supplies, pasteurization of milk, typhoid inoculations, and treatment with antibiotics have greatly reduced the incidence of the disease. See also pp.1068–1069, 1069.

Typhoon, name given in the Pacific to a HURRICANE, a violent tropical cyclonic storm. See also pp.248–251, 248–251.

Typhus, or typhus fever, any of several infectious diseases caused by rickettsial bodies (micro-organisms classified between bacteria and viruses). Epidemic typhus, *Rickettsia prowazekii*, is transmitted in the faeces of human body lice. Vaccinations and antibiotic treatment are now effective against this form. Brill-Zinsser disease, or recrudescent typhus, is a milder form of the same disease. Scrub typhus occurs mainly in tropical and semitropical areas and is transmitted to human beings by various species of mites which carry the infection from rodents.

Typography, the styling of the appearance of printed matter in which the face, size, weight and positioning of the type in which copy is to be produced are specified

by a designer, especially where layouts are complicated. The term also refers to the art of fine PRINTING itself. See also TYPESETTING.

Typology, system of groupings which aid understanding by establishing relationships between the phenomena being studied. Christian Jorgensen Thomsen, a Danish antiquary, used a typology of materials to establish his division of historical periods into the Stone, Bronze and Iron Ages.

Tyr. See TIW.

Tyrannosaurus, any of several species of large, bipedal, carnivorous, THEROPOD dinosaurs that lived during late Cretaceous times. Its head, 1.2m (4ft) long, was armed with a series of dagger-like teeth, some of which were as long as 15cm (6in). The hind legs were stout and well developed, but the forelegs may have been useless except for grasping at close range. The long tail would have served as a counterbalance to the body. The best known species is *T. rex*. Length: 14m (47ft); height: 6.5m (20ft). See also pp.281, 283.

Tyre, air-filled rubber and fabric cushion that fits over the wheels of vehicles to grip the road and absorb shock. The pneumatic tyre was invented in 1845 by Robert Thomson but was not commonly used until the end of the century, solid tyres being more popular. The pneumatic tyre consists of a layer of fabric, either rayon, nylon or polyester, surrounded by a thick layer of rubber treated with chemicals to harden it and decrease wear and tear. The angle of the grain of the fabric to the axle defines the kind of tyre: cross-ply tyres have the grain at an angle of about 55°, the more modern radial-ply have the grain parallel to the axle. The latter last longer, and are safer in bad weather; but they are less shock-absorbing and are more expensive.

Tyrian purple, natural dye obtained from the shell of a small purple marine mollusc, *Murex brandaris*, which must be crushed and exposed to light. Originally made from Mediterranean rock whelks by the Phoenicians, it takes its name from the ancient city of Tyre where it was reputedly discovered. See also p.584.

Tyrol (Tirol), federal state in W Austria, bordered by West Germany (N) and Italy (S); Innsbruck is the capital. The region is mountainous and drained by the Inn and Drava rivers. Cattle rearing, forestry and dairy farming are the chief occupations, but tourism is the mainstay of the economy. The province was taken by the HAPSBURGS in 1363. In 1805 Tyrol was awarded to NAPOLEON's ally Bavaria. In 1815 Tyrol was reunited with Austria. Area: 12,647sq km (4,883sq miles). Pop. (1971) 540,771.

Tyrone, largest county of Northern Ireland. Mainly hilly with the Sperrin Mountains in the N and Bessy Bell and Mary Gray in the S; the region is drained by the Blackwater and Mourne rivers. The county town is Omagh. Cereals are grown and dairy cattle are kept. Manufactures include linen, whiskey and processed food. Area: 3,263sq km (1,260sq miles). Pop. (1971) 139,073.

Tyrosine, crystalline AMINO ACID found in PROTEINS. It was isolated in 1849 from casein.

Tyrrhenian Sea, part of the Mediterranean Sea, W of the Italian mainland, E of Corsica and Sardinia, and N of Sicily. It contains several small island groups, including the Lipari and Pontine islands. The chief ports are Naples and Palermo. Width: 97–483km (60–300 miles); length: approx. 765km (475 miles).

Tyus, Wyomia (1945–), US sprinter who won the 100m sprint at the 1964 and 1968 Olympics, establishing a world record in 1968.

Tyutchev, Fyodor Ivanovich (1803–73), Russian lyric poet and essayist. He spent much of his life abroad in the diplomatic service. His work is strongly nationalist.

Tzara, Tristan (1896–1963), French writer, b. Romania. One of the founders of DADAISM in 1916, he tried to write poetry which ignored conventional syntax, as in his *Vingt-cinq poèmes* (1918). He wrote

the *Sept manifestes Dada* (1924), but later became more attracted to SURREALISM.

Tzotzil, one of the major Maya-language tribes that live in Mexico. They have retained much of their earlier culture; in the 1970s about 120,000 Tzotzil-speaking people lived in the state of Chiapas.

Tzu Hsi (1835–1908), Empress Dowager of the CH'ING DYNASTY of China, known as the "Old Buddha". As concubine of the Emperor Hsi'en Feng she learned the politics of the Manchu court and became one of the most powerful and feared women in Chinese history. She was an obstinate opponent of the West and modernization and encouraged the BOXER REBELLION. See also p.1622.

U

U, 21st letter of the alphabet, derived from the Semitic letter vaw (meaning hook), which also gave rise to *v*. It resembled a Y and was adopted in similar form by the Greeks, who called it *upsilon*. The Romans gave the letter its present form, and used it both as the vowel *u* and the consonant *v*. In English *u* is a vowel and has many different sounds, chief of which are the short sounds as in the words *bun*, *bull* and *bur* and the long sounds as in *dune* (diphthong) and *lunar* (in all of these examples the pronunciation of *u* is slightly different). The letter may be silent after *g* or *q* (as in *guilt* and *liquor*) or modify these letters to make the sound *gw* or *kw* (as in *language* and *liquid*). See also pp.608–609.

Ubae, Raoul (1910–), Belgian painter. He was influenced by the SURREALISTS in the 1930s and then turned to photography and etching.

U-boat, short for *Unterseeboot*, a German SUBMARINE. In WWI Germany was the first nation to employ submarines for large-scale warfare. The U-boat fleets of WWII were initially a great threat to Allied shipping, sinking nearly a million tonnes of British shipping in the first year of the war. After the entry of the USA into the war in 1942, however, more ships and aeroplanes were available for escorting Allied convoys and destroying U-boats, and the struggle to supply Britain (known as the Battle of the ATLANTIC) was won by the Allies. During the war 785 of the 1,162 U-boats launched were sunk. See also pp.478, 479, 1711, 1712.

Uccello, Paolo (1397–1475), Florentine painter, celebrated as an early master of perspective, the invention of which is sometimes wrongly attributed to him. His most creative period was from c.1436 to 1460, during which he painted *The Flood* (c.1450) and the three panels of *The Rout of San Romano* (1454–57), which were commissioned for the Medici Palace in Florence.

Udall, Nicholas (c.1505–56), English dramatist and schoolmaster. He translated several works into English, including the Great Bible (1551); and his play *Ralph Roister Doister* (c.1553), is considered the first true comedy written in English. See also p.1417.

Udmurt (Udmurtskaja ASSR), autonomous republic in the Russian Republic (Rossijskaja SFSR), USSR, in the foothills of the Urals. The region's growth was boosted during WWII when many industries were moved there from W USSR. Engineering, steel, machinery, metallurgy and food processing are the principal industries. The region has been under Russian rule since the 16th century. Area: 42,100sq km (16,250sq miles). Pop. (1980) 1,506,000.

Uffizi, Florentine palazzo, built in the 16th century by Giorgio Vasari for the Grand Duke Cosimo I de' Medici as government offices. Vasari's architectural masterpiece, it now contains the Uffizi Gallery, one of the world's greatest art collections. Painters of the Florentine and other Italian schools are represented with works by Piero della Francesca, Botticelli,

Leonardo, Michelangelo, Raphael, Titian and many others, as well as Dutch and Flemish masters.

UFO, unidentified flying object. See FLYING SAUCERS.

Uganda, independent nation of E central Africa. There are three main regions, the Lake Victoria lowlands, the N savanna plateau and the Rift Valley zone. Most of the people work in subsistence agriculture; coffee and tea are the most important cash crops. There is some mining for copper and tin, but minerals and chemical manufacturing remain undeveloped. The capital is Kampala. Area: 236,036sq km (91,133sq miles). Pop. (1975 est.) 11,549,000. See p.2152.

Ugarit, ancient city in N Syria, dating from the NEOLITHIC period. It developed as a great commercial power from its trade with Mesopotamia and later from its alliance with Egypt in the 2nd millennium. Its period of greatest prosperity occurred during the 15th and 14th centuries BC. By the 12th century economic change and foreign invasions had caused the city to decline. See also p.1187.

Uhland, Johann Ludwig (1787–1862), German poet who held various official posts and taught literature. He became one of the most popular German ROMANTIC poets and his poems, noted for their polished and lucid style, include *The Minstrel's Curse* and *Taillefer*.

Uist, North and South, two islands in the Outer Hebrides, off the NW coast of Scotland, in the Western Isles island authority. Lochmaddy is the chief town on North Uist and Lochboisdale the main town on South Uist. The principal occupations are the rearing of sheep and cattle, fishing, the weaving of tweed and seaweed processing. There is a missile range on South Uist. Area: (North Uist) 572sq km (221sq miles); (South Uist) 362sq km (140sq miles). Pop. (North Uist, 1971) 1,800; (South Uist, 1971) 3,800.

Ujiji, town in Tanzania, now included in the Kigoma Region. In the second half of the 19th century it was a centre for Arab traders in slaves and ivory. It was at Ujiji that Henry STANLEY found David LIVINGSTONE in 1871.

Ujjain, city in W central India, on the River Sipa, 320km (200 miles) E of Ahmadabad. It is one of the seven holy cities of India, and a Hindu pilgrimage centre. The ancient city of Ujjain dates from the 6th century BC and is one of India's oldest cities. It has many notable temples and mosques. Pop. (1971) 203,278.

Ukelele, or ukulele, small guitar developed in Hawaii and taken there by Portuguese seamen. Shaped like a classical guitar with a wooden body, round sound hole and fretted fingerboard, it has nylon strings tuned to A, D, F[♯], B or G, C, E, A. It is strummed or plucked to accompany popular songs.

Ukiyo-e, Japanese paintings and woodblock prints that were prevalent in the Edo period (1615–1867). Their subject matter included people engaged in everyday activities as well as Kabuki actors, who were popular in the city of Edo (now Tokyo). Moronobu (c.1625–95) is generally considered the originator of the true ukiyo-e print and he gained popularity for his woodcut illustrations for popular literature. Other famous ukiyo-e printmakers were Harunobu, Hiroshige, Hokusai, Kiyonaga, Sharaku and Utamaro.

Ukraine, or Ukrainian Soviet Socialist Republic, constituent republic of the USSR, in the SW, bordering on the Black Sea. Its capital is Kiev. It contains about 20% of the USSR population and is second in economic importance only to Russia. It supplies about 25% of the nation's food, especially wheat, and about 30% of its industrial output: metallurgy, chemicals and machine-building. The Ukrainian language is a Slavic tongue, close to Russian. After the BOLSHEVIK revolution of 1917, the Ukraine proclaimed its independence, but a civil war ended in the defeat of Ukrainian nationalism and the establishment of the Ukraine SSR in Dec. 1919. It joined with the other republics to form the USSR in 1923. From 1920 to 1939

the 6 million inhabitants of the western Ukraine were ruled by Poland. They were rejoined to the Ukraine when Germany and the USSR partitioned Poland in 1939. In 1940 it acquired Northern Bukovina and part of Bessarabia from Romania. In 1945 it gained Ruthenia from Hungary. Area: 445,000sq km (171,815sq miles). Pop. (1976) 49,075,000.

Ulan Bator (Ulaanbaatar), capital of Mongolia, on the River Tola. It was a focus for the Mongolian autonomy movement, and independent Mongolia was proclaimed there in 1911. It was occupied by White Russian forces in 1924 and became the capital of the Republic in the same year. It is the political, cultural and economic centre of the country. Manufactures: textiles, leather, paper, alcohol, food products and glassware. Pop. (1978 est.) 40,000.

Ulanova, Galina (1910–), Russian ballerina who made her debut in 1928. After 1944 she was prima ballerina of the Bolshoi Theatre, Moscow, and excelled in *Swan Lake*, *Giselle* and the Soviet Première of Prokofiev's *Romeo and Juliet* (1940).

Ulbricht, Walter (1893–1973), Communist leader of East Germany. A founder of the German Communist Party, he fled to Moscow in 1933 but returned with the Soviet army in 1945. He became Secretary-General of the Party in 1950 and leader of East Germany, becoming Chairman of the Council of State in 1960. See also p.1725.

Ulcer, sore or lesion on the skin or in the mucosal lining of the gastrointestinal system, where it is frequently caused by abnormally large secretion of gastric juices over a prolonged period. Gastric ulcers may remain superficial, or penetrate the affected organ. This psychophysiological disorder is often precipitated by emotional stress and worry. Symptoms of such ulcers include stomach pains (particularly after eating), nausea and (in untreated cases) haemorrhaging. Treatment varies according to location and type of ulcer, but usually a strict diet is recommended with attention to the underlying cause. Some ulcers may be removed or treated by surgery. See also pp.1068, 1068.

Ullswater, lake in Cumbria, NW England, about 8km (5 miles) SW of Penrith. Area: 9sq km (3.5sq miles). Max. depth: 62.5m (205ft).

Ulm, city in central West Germany, on the River Danube, 72km (45 miles) SE of Stuttgart. One of the most important political and commercial centres of medieval Europe, its industries include textiles, processed food and beer. Pop. (1970) 92,500.

Ulna, long bone of the inner side of the forearm. At its upper end it articulates with the HUMERUS and with the RADIUS, the slightly shorter bone of the outer side of the forearm. At its other end it articulates with the RADIUS only, not directly with the carpal bones of the wrist. See also p.147.

Ulster, ancient province in NE Ireland, consisting of nine counties. Six of these counties are now in NORTHERN IRELAND. Cavan, Donegal and Monaghan form Ulster province in the Republic of IRELAND. Ulster also refers to Northern Ireland as a political unit of the UK.

Ulster Unionists, political party in Northern Ireland, which arose in the late 19th century to defend the six northern provinces of Ulster from IRISH HOME RULE and to maintain the union with Britain. In 1904 the Ulster Unionist Council was formed to link Orange lodges and constituency associations in the fight against home rule. It is almost exclusively a Protestant party. From 1922 until the imposition of direct rule from Westminster in 1972 it was the ruling party in the Northern Irish assembly.

Ultra high frequency waves (UHF waves), radio waves in the frequency band 300–3,000MHz (megahertz). UHF waves, with a wavelength of about one metre or less, are used for TELEVISION broadcasting.

Ultra-microscope. See MICROSCOPE.

Ultramontanism, position taken by Catholics who asserted the supremacy of

the papacy over the claims of national churches. The word comes from the Latin *ultra montes* ("beyond the mountains", i.e. the Alps). It became prominent in the 16th and 17th centuries and was particularly associated with the supporters of papal authority against those of the Gallican church. Following the definition of papal infallibility in 1870, it was opposed by the OLD CATHOLIC CHURCH, in Germany, Austria and Switzerland.

Ultrasonics, study of sound with frequencies beyond the upper limit of human hearing, i.e. with frequencies in excess of 20,000Hz. Applications of ultrasonics include the agitation of liquids to form emulsions; detection of flaws in metals (the ultrasonic wave passed through a metal specimen is reflected by a hairline crack); cleaning small objects by vibrating them ultrasonically in a solvent; echo sounding in deep water; soldering aluminium; and, in medicine, the location of a tumour, the scanning of a pregnant woman's abdomen to produce a "picture" of the fetus and the treatment of certain neurological disorders. See also pp.646, 832–833, 833.

Ultra-violet lamp, lamp which emits radiation of wavelength 2,200 to 4,000 ÅNGSTRÖMS. It is used as a germicidal lamp, for fluorescent effects and for producing an artificial "suntan". It uses a mercury vapour discharge lamp, whose walls are made of quartz, which is much more transparent to ultra-violet light than is glass.

Ultra-violet light, ELECTROMAGNETIC RADIATION having wavelengths shorter than those of visible light, from about 40 to about 4,000 ÅNGSTRÖMS, but larger than those of X-RAYS. Between about 40 and 3,000 Ångströms these rays affect living matter in a number of important ways. They kill bacteria and many other parasites and so are useful as a means of sterilizing, whether as sunlight or from ULTRA-VIOLET LAMPS. They tan the skin by their effect on the pigment MELANIN, and help to make VITAMIN D in the body, which plays a part in the prevention of RICKETS. Ultra-violet light also causes certain materials to fluoresce (emit visible light), such as the optical brightness added to some detergents.

Ulysses. See ODYSSEUS.

Umayyads, or Ommayyads, first great MUSLIM dynasty of ARABIAN CALIPHS, which ruled from 661 to 750. It was a merchant family of Mecca. The house had two ruling branches, the Sufyanid (r. 661–84) and the Marwanid (r. 684–750).

Umbelliferae, the carrot family of flowering plants, all of which have many small flowers, which are usually white or yellow and are borne in umbella-like clusters (umbels) at the ends of stalks. Many species are edible, including PARSLEY, CELERY, PARSNIP, FENNEL, DILL, and ANGELICA.

Umberto, name of two kings of Italy. Umberto I (1844–1900; r. 1878–1900). His interests became increasingly imperialistic and he led Italy into the Triple Alliance of 1882 with Germany and Austria. He was assassinated at Monza in 1900. Umberto II (1904–46; r. 1946), the last King of Italy, was the son and successor of VICTOR EMMANUEL III. See also p.1660.

Umbilical cord, long, thick cord that connects a developing fetus with the placenta, the hormone-secreting structure through which the fetus receives food and oxygen from the mother's bloodstream and gets rid of waste products. The umbilical cord contains two large arteries and one vein. At birth, the cord is clamped and cut from the placenta; the part of the cord remaining on the baby's abdomen dries and falls off, leaving the scar known as the navel.

Umbrella bird, any of three species of large tropical American birds, each with a retractile, black umbrella-like crest and a long, often tubular-shaped feathered lappet, or tuft, on the throat. The ornate umbrella bird (*Cephalopterus ornatus*) lives high in trees, feeds on fruits and emits loud piping sounds. See also p.315.

Umbrella pine, also called stone pine, one of the classical Mediterranean landscape trees. It has a characteristic umbrella-like shape which seems to vary remarkably lit-

tle from individual to individual. Height: to 7m (20ft). Species *Pinus pinea*. See also p.369.

Umbria, region in central Italy made up of the provinces of Perugia and Terni; Perugia is the regional capital. The region is traversed by the APPENNINES and is drained by the River Tiber. Cereal crops, grapes and olives are grown, and cattle and pigs are raised. In the 15th and 16th centuries the city was the centre of the Umbrian school of painting, which included PERUGINO. Industries: iron and steel, chemicals, textiles, food processing. Area: 8,456sq km (3,265sq miles). Pop. 783,274.

Umbriel, satellite of Uranus, at a distance of 267,180km (165,950 miles) from the planet. The moon has a diameter of approx. 1,000km (620 miles). See also pp.966, 966.

Umm Durman. See OMBURMAN.

UN. See UNITED NATIONS.

Unamuno y Jugo, Miguel de (1864–1936), Spanish EXISTENTIALIST philosopher and writer, best known for his work *The Tragic Sense of Life in Men and Peoples* (1912) in which he discusses the fundamental dichotomy between reason and faith.

Uncle Remus. See HARRIS, JOEL CHANDLER.

Uncle Sam, figure that symbolizes the USA. Samuel Wilson (1766–1854), an army provisioner, stamped the letters "U.S." on barrels of salted meat during the WAR OF 1812. Some people thought it stood for "Uncle Sam". Wilson and those who opposed the war adopted it as an unfriendly nickname for the government.

Unconformity, in geology, break in the time sequence of rocks layered one above the other. This time gap is explained by the erosion of ancient rock layers, which then sank beneath the surface of the sea, and were built upon by later sediments.

Unconscious, term in psychology for that part of mental life believed to operate without the individual's immediate awareness or control. In FREUD's system it has two parts, the ID (instinctual drives) and the partly-conscious SUPER-EGO (which represses the ID). JUNG added that the unconscious is partly inherited concepts or the ability to form them.

Underground arts, movement that flourished in many artistic fields in Britain and the USA in the 1960s among those artists who rejected the conventional structure of artistic success. Underground film-making flourished, as did street theatres and ephemeral magazines that advocated such things as revolution, anarchy and drug-taking.

Underground railway, electrically operated subterranean passenger transport system in urban areas. There are seven cities which run major systems with more than 40km (25 miles) of track: Berlin, Boston, Hamburg, London, Moscow, New York and Paris. More than two dozen cities have smaller systems. The first underground railway was built in London between 1860 and 1863. It was steam-powered and carried passengers from Farringdon to Paddington. The London system, which has approx. 400km (250 miles) of track is the world's second largest. The largest is the New York subway, which has more than 1,130km (700 miles) of track. The first continental European system was opened in Budapest in 1896. See also pp.508–509.

Under Milk Wood (1953), play by Dylan THOMAS. Often called "A Play for Voices", it was written specifically for radio. Using evocative language and imagery, Thomas depicts a day in the life of a small Welsh coastal town and the memorable characters who live there.

Underpainting, term used to describe (a) what was the initial stage in traditional oil painting, i.e. the painting of a picture in monochrome before the addition of colour; (b) a layer of colour which is to be glazed or scumbled. See also SCUMBLING.

Underwriting, guarantee or cover of a loss either in connection with insurance, particularly marine insurance, or the issue of new STOCKS or SHARES. The technique began at LLOYD'S COFFEEHOUSE in London in the 17th century. A ship's cargo was

recorded on a slip of paper and people willing to share the risk of insuring it would sign their names (underwrite) to it and guarantee what they would pay against loss.

Undset, Sigrid (1882–1949), Norwegian novelist who was awarded the 1928 Nobel Prize in literature. Her masterpiece, *Kristin Lavransdatter* (1920–22), is a trilogy of 14th-century life in Norway.

Undulant fever. See BRUCELLOSIS.

Unemployment benefit, financial aid to the unemployed, first introduced into Britain by the unemployment insurance scheme of 1911. Before this the only unemployment benefit was that occasionally paid by small craft unions to its members, although state provision of benefits had been introduced in Germany in the 1880s. Unemployment benefit is now paid by the Department of HEALTH and SOCIAL SECURITY.

UNESCO, United Nations Educational, Scientific and Cultural Organization, agency founded in 1945 to promote peace by improving the world's standard of education and by bringing together nations in cultural and scientific projects. It gives aid to developing countries. Its head-quarters are in Paris.

U Ne Win. See NE WIN, U.

Unfair dismissal, dismissal from a job without just cause, legally distinguished from WRONGFUL DISMISSAL. In Britain the Trades Union and Labour Relations Act (1974) established for employees, subject to certain exceptions, the right not to be dismissed unfairly. The Act enables an employee who thinks he has been unfairly dismissed to seek a remedy by complaining to an Industrial Tribunal. The Act was amended by the Employment Protection Act (1975) which makes substantial changes to these provisions.

Ungava, region of New Quebec, Canada, E of Hudson Bay and N of the Eastmain River. It was transferred from the North-West Territories in 1912 to the province of Quebec; the E portion was assigned to Newfoundland in 1937. Ungava is rich in minerals, especially iron ore. Area: 622,000sq km (240,000sq miles).

Ungulate, MAMMAL with hooved feet. Most ungulates, including cattle, sheep, pigs and deer, are members of the order ARTIODACTYLA. The order PERISSODACTYLA consists of horses, tapirs and rhinoceroses, while the orders PROBOSCIDEA and HYRACOIDEA only elephants and hyraxes, respectively. See also pp.94–95.

UNICEF, United Nations International Children's Emergency Fund, agency founded in 1946 to bring aid to children in war-devastated countries and in regions struck by natural disasters. Unlike most UN agencies it depends upon grants from individuals and governments, not on requisitions from UN member states. It is now called the United Nations Children's Fund.

Unicorn, in mythology and heraldry, a magical animal resembling a graceful horse or a young goat with one thin conical or helical horn on its forehead. Traditionally a proud, wild and shy creature, it was believed that a maiden could capture it if she sat very still, for the unicorn would lay its head upon her lap and become docile. See also p.1900.

Unidentified flying objects. See FLYING SAUCERS.

Unified field Theory, attempt to extend the General theory of RELATIVITY to give a simultaneous representation of both gravitational and electromagnetic fields. A more comprehensive theory would also include the strong and weak interactions. Although some success has been achieved in unifying the electromagnetic and weak interactions, the general problem is still unsolved. See also pp.858–859.

Uniformity, Act of (1662), act of the English Parliament regulating the form of worship in the CHURCH OF ENGLAND. It required all ordained clergy to follow the Book of COMMON PRAYER, and about 2,000 beneficed clergy were driven out of the Church by it. The act also required the clergy to repudiate the SOLEMN LEAGUE AND COVENANT, to forswear the taking up

Union, Act of

of arms against the Crown, and to adopt the Liturgy of the Church of England. Those people unable to accept the doctrines and practices of the Church of England were later known as NONCONFORMISTS and the foundation of many such groups dates from 1662.

Union, Act of (1707), act uniting the kingdoms of England and Scotland under one British Parliament at Westminster, with England and Scotland each retaining its own legal system and national church. See also p.1472.

Union, Act of (1800; effective 1801), union of Britain and Ireland in one Parliament. The Irish legislature was abolished and Ireland was given four spiritual peers, 28 representative peers and 100 MPs in the British Parliament. The established churches of the two countries were united, and free trade was introduced between the two countries.

Union, acts of (1536-43), series of acts which united England and Wales. The acts abolished the Welsh MARCHES, reorganized the Welsh counties, established English law and administration, in Wales, made English the official language in Wales, and provided for Welsh representation in the English Parliament.

Union Jack, or Union Flag, the flag of the United Kingdom. It first appeared at the accession of JAMES I, with the red cross of England imposed on the Scottish flag, a white cross on a blue field. When Ireland and Britain were united by the Act of 1800, the red saltire of St Patrick was placed on the white saltire of St Andrew. See also pp.1662, 1963.

Union Movement, political group in Britain formed in 1931 between Sir Oswald MOSLEY'S New Party and some members of the LABOUR PARTY. It was merged in 1932 with the British Union of Fascists, popularly known as the BLACK SHIRTS. The Union movement was revived in 1948 with the slogan "Europe a Nation".

Union of South Africa, the union under one parliament of the four self-governing colonies of Natal, the Transvaal, the Orange Free State and the Cape Colony. It was formed in 1910 and given Dominion status within the British Empire. The name was changed to the Republic of SOUTH AFRICA when the country left the British Commonwealth in 1961.

Union of Soviet Socialist Republics. See USSR.

Union of the Two Canadas (1840), act of the British Parliament placing Upper and Lower Canada (present-day Ontario and Quebec) under one Parliament, creating the Province of Canada.

Unions. See TRADE UNIONS.

Unitarianism, version of Christianity that denies the doctrine of the Trinity. Originally considered a heresy, it flourished in Poland in the 16th century under the teaching of Faustus Socinus. John Biddle first preached Unitarianism in England in the 1640s, and a Unitarian church was established in Philadelphia, USA, in 1796 by Joseph Priestley.

United Arab Emirates (Itihād al-Imārat al-'Arabiyyah), formerly the Trucial States, a union of seven emirates (Dubai, Ajman, Abu Dhabi, Ras al-Khaimah, Fujairah, Sharjah, and Umm al-Qaiwain) bordered by the Persian Gulf (N), Qatar (NW), Saudi Arabia (W and S) and Oman (E). The terrain is flat, consisting mainly of sand and salt flat desert; only in the E does the land rise to any height. Agriculture is limited to the mountain region, oases, and areas accessible to irrigation; the main crops are dates and vegetables. The economy is based on oil which was first produced in 1962 from Abu Dhabi. The temporary capital is Abu Dhabi. Area: 83,600sq km (32,278sq miles). Pop. (1975 est.) 656,000. See p.2159.

United Arab Republic (UAR), political union of Egypt and Syria formed in 1958 with its capital at Cairo and Gamal Abdel NASSER of Egypt as its president. Although Syria withdrew from the Union in 1961, Egypt retained the title "Arab Republic" until Sept. 1971, when it joined the confederation of Arab Republics (Egypt, Syria and Libya).

United Empire Loyalists, Canadian

organization comprising descendants of American Loyalists who fled to Canada during the American War of Independence and after the Treaty of PARIS had failed to make adequate provision for them. Most settled in the Maritime Provinces and Ontario. The organization has been a pro-British conservative force in Canadian politics.

United Irishmen, Society of, underground Irish nationalist society formed in Ulster in 1791 by Theobald Wolfe TONE, James Napper Tandy and Thomas Russell. Its members included both Protestants and Roman Catholics. Its radical objects included the establishment of a representative, independent Irish parliament. Its armed organization was chiefly responsible for the rebellion of 1798.

United Kingdom (UK). See GREAT BRITAIN.

United Kingdom Atomic Energy Authority, British public corporation set up by the Atomic Energy Authority Act of 1954. It is now responsible for the control of atomic energy research and development, and is responsible to the Secretary of State for Energy.

United Nations (UN), international organization set up to enable countries to work together for peace and mutual development. It was established by a charter signed in San Francisco in June 1945 by 50 nations; in 1981 the UN had 161 members and several related agencies. See also pp.1671, 1701, 1730, 1782-1785.

United Nations International Children's Emergency Fund. See UNICEF.

United Nations Relief and Works Agency for Palestine Refugees (UNRWA), organization founded in 1950 to provide relief and welfare services for Palestinian refugees in Lebanon, Syria, E Jordan, the West Bank and the GAZA STRIP. In 1975 the war in Lebanon forced the removal of the UNRWA headquarters from Beirut to Amman, but it returned to Beirut at the end of 1977. The registered refugee population in mid-1977 was 1,706,486.

United Provinces, former state in N India which included the Ganges plain; considered the most historical and religious region of the country. The area was under Muslim rule from the 14th to the 18th century and became the United Provinces of Agra and Oudh in 1902. It is almost co-extensive with the modern state of UTTAR PRADESH, which was formed in 1950.

United Provinces of the Netherlands, also known as the Dutch Republic, an historic state that was formed in 1579 out of the Union of UTRECHT and became a world power in the 17th century. See also p.2104.

United States of America. See USA.

Unities, theatrical elements of time, place and action, said to derive from the Poetics of ARISTOTLE and introduced into French drama by Jean Mairet (1604-86). The convention of a play taking place within the span of a day and comprising one action was used by other French dramatists such as CORNEILLE and RACINE.

Unit One, association formed in 1933 by a number of British artists who, although employing different styles, shared a contemporary approach to the arts. They included Paul NASH, Henry MOORE, Barbara HEPWORTH and Edward BURRA.

Units. See CGS SYSTEM; MKS UNITS; WEIGHTS AND MEASURES; SI UNITS.

Unit trust, organization which raises money from small investors and invests in a spread of equity shares in order to reduce the risk of financial loss. Unit trusts were first formed in Britain in the 1860s, but they did not become widespread until the 1950s.

Universal joint, connection between two shafts which allows them to rotate together even when they are at an angle to each other.

Universals, in philosophy, characteristics shared by two or more objects, which are referred to as instances. PLATO considered the universals to be distinct from their instances. This theory poses the problem of the relationship between the two. A CONCEPTUALIST view holds that universals are ideas constructed by the mind; this avoids the problem but cannot explain the

nature of the external world. For NOMINALISTS, such as William of OCCAM, there are only general words such as "dog" and no universals such as "doghood".

Universal set, in mathematics, collection of all elements that could be included in a particular set. See also p.790.

Universal time, system of time reckoning based on the mean solar day, the average interval between two successive transits of the Sun across the Greenwich (0°) meridian.

Universe, aggregate of all matter, energy and space, consisting of vast cold, empty regions with a distribution of high-temperature stars and other objects grouped in galaxies. On a large scale the universe is considered uniform: it is identical in every part. It is believed to be expanding at a uniform rate, the galaxies all receding from each other. The origin, evolution and future characteristics of the universe are considered in several cosmological theories. Recent developments in astronomy imply a finite universe, as postulated in the EXPANDING UNIVERSE Theory. See also pp.1004, 1052.

Universe (theories of formation). See "BIG BANG" THEORY; STEADY STATE THEORY.

University, institution of higher learning, which arose from the studia generalia of the 12th century themselves arose out of the need to provide education for priests and monks were attended by students from all parts of Europe. Bologna became an important centre of legal studies in the 11th century. Other great studia generalia were founded at Paris, Oxford and Cambridge, where the teaching of the seven liberal arts took on increasing significance. The word universitas applied originally to guilds of students or of masters, but by the late 14th century came to designate an institution whose corporate existence had been legally recognized. The first Scottish university was founded at St Andrews in c.1412, the first Irish university at Dublin (Trinity College) in 1591. Oxford and Cambridge were the only English universities until the founding of Durham (1832) and London (1836). London was the first university open to Non-conformists; it was also the first British university to award degrees to women undergraduates, in 1847.

University Extension Courses, system of higher education for those unable to attend full-time university because of work commitments. Such courses were first organized in Britain by Cambridge University in 1867.

Unknown warrior, unidentified body of a member of the armed forces that symbolizes all those killed in action who lie in unnamed graves. Many nations accorded a ceremonial burial to such a warrior after WWI. In Britain the tomb of the Unknown Warrior is in the centre of the nave of WESTMINSTER ABBEY, London; in France it is beneath the ARC DE TRIOMPHE in Paris; and in the USA it is in the Arlington National Cemetery, Washington.

Unlawful assembly, in English law, one of three main offences involving public disorder (the others are riot and riot). Its definition in COMMON LAW is a gathering of three or more people with the intention of committing criminal violence or with the effect of causing a breach of the peace. When the people move off to execute their plan it becomes a rout, when the action begins a riot. See also RIOT ACT.

Unlearned Parliament, parliament of HENRY IV of England, summoned in 1404 at Coventry. Henry's earlier parliaments had proved intractable and in order to get a parliament more subservient to his wishes he instructed his sheriffs to return no lawyers.

UNRWA. See UNITED NATIONS RELIEF AND WORKS AGENCY FOR PALESTINE REFUGEES.

Unsaturated compound, in organic chemistry, compound in the molecule of which two or more carbon atoms are linked, or bonded together, with double or triple bonds. Simple examples are ethylene, H₂C=CH₂, and acetylene, HC≡CH. By breakage of their double or triple bonds, unsaturated compounds can add on more atoms to their molecules.

Unsaturated fats, natural fatty com-

pounds, present in animal and vegetable matter, containing at least one double bond between two carbon atoms. By far the most abundant are oleic acid, CH₃(CH₂)₇CH=CH.COOH; linoleic acid, CH₃(CH₂CH=CH)₂(CH₂)₄.COOH. These acids, being unsaturated, confer many of the reactive properties of oils and fats used in industry and for cooking.

Unsaturated solution, chemical solution in which more of the solute (dissolved substance) can be dissolved without causing precipitation. At the same pressure and temperature, it is possible to dissolve more and more of the compound to make first a SATURATED SOLUTION, then a super-saturated solution.

Untouchables, fifth and lowest class of the Indian HINDU CASTE system, so called because it is believed that to touch people of this class is ritually polluting. Although this PARIAH caste was legally abolished in 1949, much discrimination remains. See also p.1848.

U Nu. See NU, U.

Upanishads, Hindu texts constituting the final stage of Vedic literature and of uncertain authorship, dating from approximately 650 BC. Of the 108 Upanishads, there are 14 principal ones. In prose and verse, they are in the form of dialogues between teacher and pupil and speculate on reality and man's salvation. See also BRAHMAN; HINDUISM.

Upas tree, evergreen tree native to Java; its milky juice is used to poison the tips of arrows. The reddish brown fruit, 2cm (0.8in) in diameter, is pear-shaped. Height: to 30m (100ft). Family Moraceae; species *Antiaris toxicaria*.

Uplike, John Hoyer (1932-), US author whose novels, usually about contemporary life, include *The Poorhouse Fair* (1959), *Rabbit Run* (1960), *The Centaur* (1963), *Couples* (1969), *Rabbit Redux* (1972) and *Marry Me* (1976).

Upham, Charles Hazlitt (1908-), New Zealand soldier and farmer, the sole recipient of a VICTORIA CROSS with Bar during WWI. His VC was earned in Crete, its bar at Ruweisat Ridge, north Africa.

Upjohn, Richard (1803-78), US architect, b. Britain, the founder and first president (1857-76) of the American Institute of Architects. He is best known for his Neo-Gothic churches.

Upper atmosphere, region of the atmosphere, extending upwards from about 50km (30 miles), which is free of disturbances caused by the weather. It includes the MESOSPHERE, THERMOSPHERE and IONOSPHERE. At this height the air is rarified, at temperatures ranging from -110°C (-170°F) in the lower regions to 250-1,500°C (500-2,700°F) higher up. The behaviour of the upper atmosphere is greatly affected by such extra-terrestrial phenomena as solar radiation and cosmic rays, which cause the gas molecules to produce the ionosphere, and atmospheric tides, which cause turbulence. See also pp.246-247.

Upper Canada, formed 1791, region that is now the province of Ontario. The name was changed to Canada West in 1841 and to Ontario after the formation of the Confederation of Canada in 1867. See also pp.1614-1615.

Upper Volta, land-locked republic in W Africa. It is an extremely poor country and 90% of the people are subsistence farmers. Cotton, groundnuts and sesame seeds are the chief crops; the rearing of animals is also important. The capital is Ouagadougou. Area: 274,200sq km (105,869sq miles). Pop. (1979 est.) 6,617,000. See also p.2167.

Uppsala (Upsala), city in E Sweden, 64km (40 miles) NNW of Stockholm, on the Fyrisån River; capital of Uppsala county. The University (1477) is the oldest in N Europe; there is a fine 13th-century Gothic cathedral. Industries: printing, food processing, metal goods. Pop. (1978) 143,386.

Upwelling, the process that brings water of greater density and lower temperature up to the surface of the ocean. It is especially characteristic of the W side of continents where winds blow parallel to the coast and the water carried away by the

surface current is replaced by the bottom water. See also pp.8-9.

Ur, ancient city in S Mesopotamia. Settled in the 4th millennium BC, it prospered during its First Dynasty (2,600 BC), and during its Third Dynasty (2,300-2,200 BC) it became the richest city in Mesopotamia, probably in the late 4th century BC. Excavations undertaken in the 1920s and 1930s revealed that Ur was a thriving commercial centre before the First Dynasty. See also pp.1163-1164.

Uralic, family of languages spoken by about 23,000,000 people in parts of N and E Europe and N Asia. Its two main branches are FINO-UGRIAN and SAMOYED.

Urals, range of mountains in the Russian Republic (Rossijskaja SFSR), USSR, traditionally marking the boundary between Europe and Asia. The range extends from the Arctic in the N to the Ural River in the S. Except for the N section of the range, the mountains are extensively forested, and the timber industry is important. The Urals' chief importance lies in their mineral deposits, which include iron ore, oil, coal, copper, nickel, gold, aluminium and many precious stones. These resources have given rise to the Urals industrial region in the central and S Urals and adjacent lowlands. Industrial development was spurred under the first two Soviet five-year plans (1929-39) and during WWII, when many industries were moved there from W USSR. The highest peak is Mt Narodnaya, rising to 1,894m (6,214ft). Length: approx. 2,400km (1,500 miles).

Uraninite, oxide mineral, uranium oxide (UO₂), found in PEGMATITES and medium-temperature veins. Its crystal structure is cubic system as cubes, octahedrons and dodecahedrons; when botryoidal (like a bunch of grapes), with radiating structure, it is called PITCHBLLENDE. Greasy or dull black; hardness 5-6; s.g. 7.5-9.7. Pitchblende is a major source of URANIUM.

Uranium, radioactive metallic element (symbol U) of the ACTINIDE group, identified in 1789. It occurs in several minerals, the chief ones being PITCHBLLENDE (oxide), autunite and torbernite. The element is important because of its use in fission reactors and bombs. The naturally occurring element contains U²³⁸ (99.28%), U²³⁵ (0.71%), and U²³⁴ (0.0058%). U²³⁵ (half-life 7.1 × 10⁸ yr) is fissionable and will sustain a neutron chain reaction. Fuels used in reactors are enriched with this isotope by gaseous diffusion, using the volatile hexafluoride, or by a centrifuge. In breeder reactors the isotope U²³⁸ is converted into Pu²³⁹ by neutron capture. Chemically uranium is a reactive metal; it oxidizes in air and reacts with cold water. Properties: at. no. 92; at. wt. 238.029; s.g. 19.05; m.p. 1,132°C (2,070°F); b.p. 3,818°C (6,904°F); most stable isotope U²³⁸ (half-life 4.51 × 10⁹ yr).

Uranium oxide, one of a series of compounds of which UO₂, U₃O₈, U₂O₇ and UO₃ are the most common, and of which UO₃ is the most stable. The latter is green, brown or black with an orthorhombic crystalline structure. URANINITE and PITCHBLLENDE (containing UO₂ and UO₃) occur naturally and are used as a source of uranium.

Uranus, in Greek mythology, the starry sky, husband and son of GAIA, the broad-bosomed earth.

Uranus, seventh planet from the Sun discovered in 1781 by William HERSCHEL. It has five satellites. The outer layers of Uranus are gaseous and the surface temperature is extremely low. It has an axial tilt of 98°. Mean distance from the Sun, 2,869,000,000km (1,780,000,000 miles); mass, 14.6 times that of Earth; diameter, 51,800km (32,375 miles); rotation period, 10hr 48min; sidereal period, 84 years. See also pp.926-927, 926-927, 966, 966; 1050, 1050.

Urartu, ancient kingdom (c. 1270-612 BC) situated in present-day E Turkey. In the 8th century BC, when the empire was at its most powerful, it brought most of N Syria under its influence. See also pp.1188-1189.

Urban, name of eight Roman Catholic

popes. Saint Urban I (r.222-230) is reputed to have been a MARTYR. Urban II (c.1035-99; r.1088-89), elected in Terracina, S of Rome, was opposed by ANTIPOPE Clement III, who was supported by the Emperor Henry IV. In 1095, at the Council of Clermont, he launched the idea of the First CRUSADE. His work as a reformer encouraged the development of the CURIA ROMANA and the formation of the College of Cardinals. (See also CARDINALS, COLLEGE OF; HC1 p.176, 176.) Urban III (d.1187) was elected in 1185. Urban IV (c.1200-64; r.1261-64), who was unable to live in Rome because of civil wars there, inherited the conflict between the papacy and the HOHENSTAUFEN family. He was an able administrator and St Thomas AQUINAS worked for the Curia during his papacy. He established the feast of CORPUS CHRISTI. Urban V (c.1310-70; r.1362-70) crowned at Avignon, attempted in 1367 to return the papacy from Avignon to Rome. Insurrections led him to return to Avignon in 1370. He was beatified in 1870. The election of Urban VI (c.1318-89; r.1378-89), an Italian, was declared invalid by the 13 French cardinals in the College, who elected the French antipope, Clement VII, at Fondi in 1378, beginning the GREAT SCHISM. The papacy of Urban VI was marked by confusion. Assumed to be insane, he is believed to have murdered at least five cardinals and a bishop. Urban VII (1521-90) died in the year of his election. Urban VIII (c.1568-1644; r.1623-44), an active and knowledgeable patron of the arts, approved the establishment of new orders, and particularly encouraged missionary activity.

Urbanization, process by which population becomes concentrated in urban areas. Urbanization became widespread in Britain and the USA in the 19th century and the THIRD WORLD in the 20th century. See also pp.1566-1567.

Urbino, town in Pesaro and Urbino province, Marche (The Marches) region in central Italy. Federico da Montefeltro, Duke of Urbino and a great Renaissance patron of arts, transformed the Palace of Urbino into one of the most beautiful early Renaissance palaces. Luciano LAURANA, and PIERO DELLA FRANCESCA both worked for Federico. Today Urbino's industries include tourism and textiles. Pop (1971) 16,296.

Urdu, language belonging to the Indic group of the Indo-Iranian sub-family of the Indo-European languages, one of the official languages of Pakistan. It is the mother tongue of more than 3,000,000 people in Pakistan, but is used as a second language by about as many again. It is also spoken in India by most of the country's Muslims. Urdu is quite similar to HINDI, the chief difference being that it is written in the Arabic script. Its vocabulary contains many Arabic and Persian elements that are absent in Hindi. See also p.1878.

Urea, organic chemical compound, formula CO(NH₂)₂. It is the form in which most vertebrates excrete most of their nitrogen wastes; human urine containing about 25 grammes of urea to a litre. Because it is so high in nitrogen, urea is a good fertilizer.

Ureter, in vertebrates, 25cm (10in) long narrow duct that connects the kidney to the urinary bladder, transporting URINE from the kidney to the bladder where it is stored until voided along the URETHRA.

Urethra, duct through which URINE is discharged from the bladder in mammals. Urine is produced in the kidney, stored in the bladder until pressure in the bladder triggers specific neural responses that cause urine, under voluntary control, to be released through the urethra. In males the urethra is also the tube through which SEMEN is ejaculated.

Urethritis, inflammation of the URETHRA, most frequently found in males, due to bacterial or viral infection or to mechanical obstruction. Antibiotics or surgical procedures are used for treatment. See also p.1078.

Urey, Harold Clayton (1893-), US chemist who was awarded the 1934 Nobel

Prize in chemistry for his isolation of DEUTERIUM. He later isolated ISOTOPES of OXYGEN, NITROGEN, CARBON and SULPHUR. During WWII he helped in the research leading to the production of the atomic bomb. He then turned to GEOPHYSICS and worked on recreating the atmospheric conditions of the primeval earth to elucidate the origin of life. See also p.181.

Urfé, Honoré d' (1567-1625), French writer. His five-volume *L'Astrée* (1607-10) is regarded by some critics as the first important pastoral novel in French.

Uri, CANTON in central Switzerland; the capital is Altdorf. The terrain is glaciated and forested; there is some agriculture in the river valleys and on the lower mountain slopes. Tourism and forestry are important industries. Area: 1,075sq km (415sq miles). Pop. (1970) 34,091.

Urial, Asian wild sheep. It is reddish-brown in colour; ewes have small horns and rams have massive horns that form a complete arch. Height: to 90cm (36in) at the shoulder. Species *Ovis ammon orientalis*.

Uric acid, end product of PROTEIN metabolism and found in urine, blood and lymph, and also as a salt (urate) in calculi such as KIDNEY STONES. An excessive amount of uric acid in the blood causes GOUT, with urate deposits around joints.

Urine, fluid excreted by the KIDNEYS, passing through the URETERS to the bladder and then voided through the URETHRA.

Urogenital system, major system of the body, containing the urinary and reproductive systems. The urinary system, which is part of the body's excretory system, consists of KIDNEYS, URETERS, the urinary bladder (lying in the pelvic cavity and storing URINE) and the URETHRA. In males, the reproductive system consists of paired TESTES that produce sperm cells and HORMONES and are located in an external pouch known as the SCROTUM; accessory glands; and the PENIS, the organ through which urine is expelled and sperm is ejaculated. In females, the reproductive system consists of paired OVARIES, one on each side of the pelvic cavity; FALLOPIAN TUBES, or oviducts, which provide a passage from the ovaries to the uterus (WOMB); the uterus, or womb, located in the pelvic cavity between the bladder and rectum; and the CERVIX, or lower part of the uterus, which opens into the VAGINA, the opening for intercourse and childbirth. In females, the urethral and vaginal openings are separate but close to each other. See also pp.161, 164-165.

Uris, Leon Marcus (1924-), US author of historical novels, notably of the best-seller *Exodus* (1958), whose theme was the establishment of the state of Israel.

Urnfield culture, late Bronze Age culture that developed in central Europe and N Italy by the 12th century BC. Characterized by the spread of burial in individual urns, and the increasing use of slashing swords, the culture spread, probably without major migrations, over W Europe, and formed the basis of the Celtic civilization. See also pp.1198-1199.

Urmia, Lake (Rezā'iyeh, Daryācheh-ye), shallow salt lake in NW Iran, just E of Rezā'iyeh. The largest lake in Iran, it contains Shāhl Island to the N and small islets to the S. It has no outlets, and receives the Talkheh and Zareh rivers and drainage from nearby mountains. Sharifkhaneh is the chief lake port. Area: approx. 4,701sq km (1,815sq miles). Depth: approx. 15m (49ft).

Urochordata, subphylum of the phylum Chordata; it includes small satentary, marine animals known as Tunicates, or SEA SQUIRITS, which possess few typical chordate features except for paired gill openings. Their free-swimming larvae have a tail and a NOTOCHORD, above which is situated a tubular nerve cord. See also pp.54-55.

Urodela. See NEWT; SALAMANDER.

Urquiza, Justo José de (1801-70), Argentine general and first constitutional President from 1854 to 1860.

Ursa Major. See GREAT BEAR.

Ursa Minor. See LITTLE BEAR.

Ursinus (d. c.385), ANTIPOPE (r.366-67). He was elected simultaneously with and in

Urban II could not reside in Rome until 1093, when the antipope was expelled.

Uri; the monument to William Tell in Altdorf, capital of the canton.

Urial, or Punjab sheep, are most common in Sind, northern Punjab, Tibet and Iran.

Leon Uris's novel *Mila 18* concerned the Jewish revolt in Warsaw during WWII.

Ursula, Saint

St Ursula and the virgins; their shrine in a church at Bruges, Belgium.

Uruguay; the Palacio Legislativo (Parliament building) in Montevideo.

James Ussher drafted the articles of doctrine of the Irish Protestant church.

Utopia was written as the account of a Portuguese sailor's visit to the island.

opposition to DAMASUS I, and violence repeatedly broke out between Ursinus' and Damasus' followers. Expelled twice from Rome (in 366 and 368), he was eventually exiled to Cologne after his condemnation by a Roman synod in 378.

Ursula, Saint, legendary virgin and martyr who is especially honoured at Cologne where she is said to have been slain by the HUNS with her 11, or, in some reports, 11,000 virgins on the return from a pilgrimage to Rome. She has become the patron of many educational establishments, including the **URSULINES**. She no longer has a day in the church calendar because her authenticity is dubious. See also p.1269.

Ursulines, oldest religious order of women in the Roman Catholic Church, named after its patron, St URSULA, and founded by St Angela Merici at Brescia in 1535. The first female teaching order, it soon opened convents in Germany, France and even Canada, where the first congregation of women in North America was established in 1639. It again increased in size during the 19th century and a union of Ursuline convents was created in 1900. **Urticales**, order of flowering plants with about 3,100 species ranging from large trees such as elms to herbs such as HOPS and NETTLES. Other members are MULBERRY, Indian hemp (MARIJUANA) and FIG. **Urticaria**. See HIVES.

Uruguay, official name of the Eastern Republic of Uruguay, nation on the E coast of South America between Brazil (N) and Argentina (S). The rearing of sheep and cattle on the extensive grasslands is the mainstay of the economy. Wool is exported. The capital is Montevideo. Area: 177,508sq km (68,536sq miles). Pop. (1976 est.) 3,101,000. See p.2168.

Uruguay, river in SE South America. Rising in S Brazil, and forming part of the boundary between Rio Grande do Sul and Santa Catarina states, it flows SW to form the boundary between Argentina and S Brazil, and Argentina and Uruguay, providing hydroelectricity for the latter two countries. It empties into the Rio de la Plata. Length: approx. 1,600km (1,000 miles).

Urundi. See BURUNDI.

USA, or The United States of America, the world's fourth largest nation and its greatest producer and consumer of industrial goods. The capital is Washington. It consists of 50 states and a few islands, notably Puerto Rico and the Virgin Islands of the United States. It is divided into seven geographical regions: (east to west) the Atlantic-Gulf coastal plain, the Appalachian highlands, the interior plains, the interior highlands, the Rocky Mountain system, the Intermontane region and the Pacific Mountain system. It is the world's largest producer of meat, cheese, soybean and tobacco, the second largest of milk, butter, oats and wheat. It leads the world in producing both electrical and nuclear energy. It is one of the world's largest producers of coal and steel. It is the largest producer of mica, uranium, magnesium, pig iron, motor cars and synthetic rubber. Its major exports are motor cars and parts, aeroplanes and parts, steel and iron goods, chemicals and electronic computers. Its major imports are petroleum and petroleum products, machinery, metal products and paper. Its major trading partners are Canada, West Germany, Japan and Britain. Area: 9,363, 123sq km (3,614,343sq miles). Pop. (1980) 226,500,000. See pp.2161-2167.

U.S.A. (1937), novel in three volumes by John DOS PASSOS. Comprising *The 42nd Parallel* (1930), *1919* (1932) and *The Big Money* (1936), the trilogy paints a comprehensive picture of American life, expressed from a radical viewpoint.

Ushant (Ouessant, Île d'), island in the Atlantic Ocean off the NW coast of France. It was the scene of naval battles in 1778 and 1794 between the French and the British. There is a lighthouse on the island. Sheep rearing and fishing are the chief occupations. Area: 15sq km (6sq miles). Pop. 1,814.

US Masters Golf Championship, annual event for professionals and amateurs at the Augusta National Golf Club, Georgia. It is played on a course designed by Bobby JONES and Alister Mackenzie. The first championship was held in 1934. It is officially called the Augusta National Invitation tournament. It is a 72-hole medal-play competition. In 1980, only two non-US competitors had ever succeeded in winning this, one of the most prestigious events in the golfing world.

US Open Golf Championship, annual event held at various golf courses in the USA for professionals and amateurs. The first championship was held over 36 holes at Newport, Rhode Island, in 1895. In 1898 it was made a 72-hole event. There were no championships in 1917-18 and 1942-45. Gary PLAYER of South Africa, who won in 1965, is the only non-US or non-British winner of the championship.

US Professional Golfers' Association Championship, annual event held at various courses in the USA. The association was formed in 1916 and the first event held was in the same year. It was a match-play competition until 1958, when it became a 72-hole medal-play event. Up to 1977 the only non-US or non-British winner was Gary PLAYER of South Africa, who won in 1962 and 1972.

Ussher, James (1581-1656), Irish ANGLICAN clergyman who became Archbishop of Armagh in 1625. He settled in England in 1640 but refused to sit in the WESTMINSTER ASSEMBLY in 1643 and supported CHARLES I. His chronology *Annales Veteris Testamenti* (published 1659), dated the Creation at 4004 BC.

USSR, or Union of Socialist Soviet Republics, world's third largest country (in area the largest), successor to Imperial Russia, organized as a federation of constituent republics in 1923. The capital is Moscow, in the Russian republic, which covers 77% of the area of the country. In 1923 there were four republics in the USSR; there are now 15. It includes more than 100 ethnic groups, the chief ones being the Russians, Ukrainians and Belorussians, who speak Slavic tongues and constitute 77% of the population. There are also the Turkic-speaking Uzbeks, Tatars, Kazakhs and Azerbaijanis; and the Armenians, Georgians, Lithuanians and Moldavians. Its agricultural output is about 80% of that of the USA. It is the world's largest producer of wheat, barley, oats, rye and butter and the third largest producer of fish. It is the largest producer of timber and one of the largest of coal and steel. Two-thirds of its trade is with COMECON countries. Area: 22,402,200sq km (8,649,489sq miles). Pop. (1980) 264,500,000. See p.2153.

Ustinov, Peter Alexander (1921-), British author, dramatist and raconteur, of Russian parents. His plays include *Romanoff and Juliet* (1956) and *The Unknown Soldier and his Wife* (1967). He acted in the film *Quo Vadis* (1951), and directed and appeared in the film *Billy Budd* (1962). His autobiography *Dear Me* was published in 1977.

Ust-Kamenogorsk, major centre of the USSR atomic industry. It is situated in Kazakhstan in Central Asian USSR. Pop. (1975) 257,000.

Usury, lending of money at an excessive or unlawful rate of interest. Before the Middle Ages, payment for the use of money was regarded as usury by Christians and was forbidden, particularly by the Roman Catholic Church. In general people regarded interest and usury as synonymous until the late Middle Ages, when a distinction came to be made: reasonable interest on a loan became acceptable when the lender risked capital.

Utahawa, Kuniyoshi (1797-1861), Japanese artist of the UKIYO-E school of painting and print designing. His woodblock prints depicted historical and legendary figures, and his landscapes are particularly fine.

Utah, state in W USA in the Rocky Mts. In the N half of the state the Wasatch Range separates the mountainous E from the Great Basin, which includes the Great Salt Lake, in the W. The Colorado Plateau in

the S is dissected by many canyons cut by the Colorado River and its tributaries. The arid climate hinders agriculture. Hay, barley, wheat and sugar-beet are grown by means of irrigation. The chief farming activity, however, is stock raising, especially sheep and cattle. Most inhabitants work in mining. There are rich deposits of copper, petroleum, coal, molybdenum, silver, lead and gold. The main cities are Salt Lake City (the state capital and largest city), Ogden and Provo.

The region was ceded to the USA at the end of the MEXICAN WAR and admitted to the Union in 1896. The influence of the MORMON Church is strong in the state. Area 219,931sq km (84,915sq miles). Pop. (1980) 1,461,037.

Utah War (1857-58), conflict between the MORMON settlers of Utah, USA, and troops of the federal government. The conflict began when President JAMES BUCHANAN removed Brigham YOUNG, the Mormon leader, as territorial governor and replaced him with a non-Mormon. The Mormons rebelled and about 15,000 US troops were sent into the area to subdue them.

Utamaro, Kitagawa (1753-1806), Japanese master of the UKIYO-E woodblock colour print, the first Japanese artist to become well known in the West. He excelled in depicting birds, flowers and feminine beauty. His works were strongly erotic, precise, graceful and immensely popular; women of the court were often his subjects, as in *Catching Butterflies*.

Ute, Shoshonean-speaking tribe of North American Indians, once living in W Colorado, E Utah and part of Nevada. They were fierce, nomadic warriors who, after the introduction of the horse, engaged in warfare with other Indian tribes and hunted bison. Today approximately 3,000 live on reservations in Colorado and Utah. **Uterus**. See WOMB.

U Thant. See THANT, U.

Uthman. See OTHMAN.

Utilitarianism, branch of ethical philosophy which holds that actions are to be judged good or bad according to their utility or, in the words of Jeremy BENTHAM, in proportion as they tend towards producing "pleasure, good or happiness" and preventing "mischief, pain, evil or unhappiness". The chief sources for the doctrine are Bentham's *An Introduction to the Principles of Morals and Legislation* (1789) and John Stuart MILL's essay *Utilitarianism* (1862).

Utility clothing, clothing of a uniform, sound standard, made in Britain during WWII. The manufacture, price and rationed sale of such clothing was controlled by the government, through the Consumer Needs department of the Board of Trade, established in 1941.

Uto-Aztecan languages, family of American Indian languages spoken in SW USA and Mexico. It includes Papago, Pima and Hopi of Arizona; Ute of Utah and Colorado; Comanche of Oklahoma and Shoshone, spoken in some western states. In Mexico there are Náhuatl (the language of the Aztecs), Tarahumara and Mayo.

Utopia, book by Sir Thomas MORE, published in Latin in 1516 with the first English edition in 1551. It describes "the Highest State of a Republic" and "the New Island Utopia" ("nowhere"). More sets out an ideal government and economic and social system, with each citizen having equal involvement in all aspects of life, and satirizes the defects he saw in Europe, and particularly in the England of his time. The word Utopia soon became a general name for an imaginary but ideal place. See also pp.1381, 1408.

Utopia Limited, or The Flowers of Progress (1893), two-act operetta by Arthur SULLIVAN with libretto by William GILBERT. It was first performed at the Savoy Theatre, London.

Utopian socialism, originally derisory term used by Karl MARX for that form of socialism advocated by Robert OWEN in the early 19th century. While criticizing CAPITALISM, it advocated small-scale co-operative enterprises rather than state ownership.

Utopia Planitia. See MARS.

Utrecht, city in central Netherlands, on the Oude Rijn River, approx. 32km (20 miles) SSE of Amsterdam; capital of Utrecht province. The city has been a trade centre since medieval times. It was the scene of the Union of Utrecht (1579) and the Peace of Utrecht (1713), which ended the War of the Spanish Succession. The city has a university (1636) and a 15th-century cathedral. Industries: steel, machinery, textiles, electrical equipment, food processing. Pop. (1980) 237,037.

Utrecht, Peace of (1713–14), series of treaties that ended the War of the Spanish Succession and heralded the rise of the British Empire at the expense of French colonial expansion. Louis XIV confirmed the renunciation of claims to the French throne by his grandson, Philip V of Spain, and surrendered the Spanish Netherlands, Milan, Naples, Sardinia, Mantua and the Tuscan ports, and Breisach, Kehl and Freiburg E of the Rhine to the Holy Roman Empire. France also ceded Newfoundland, Acadia (Nova Scotia), the Hudson Bay Territory and St Kitts to Britain and was obliged to recognize the English succession as being established in the House of Hanover. Spain ceded Gibraltar and Minorca to Great Britain. Commercial concessions generally favourable to Britain were an important part of the agreements. See also HCl p.312.

Utrecht, Union of (1579), agreement among the seven northern provinces (Holland, Zeeland, Utrecht, Gelderland, Groningen, most of Friesland and Overijssel) and the southern cities of Antwerp, Breda, Ghent, Bruges and Ypres of the Netherlands to continue the fight against Spanish rule. This defence pact ultimately led to a declaration of independence (1581), and formed the constitution of the United Provinces until 1795.

Utrecht psalter, 9th-century CAROLINGIAN psalter which is now in the university library at Utrecht. Each psalm is illuminated with an ink drawing in a freehand style unlike the usual Carolingian style. It was taken to England in the 10th century and influenced the Anglo-Saxon school.

Utrecht School, Dutch school of painters who were influenced (c.1610–20) in Rome by the realism of CARAVAGGIO and his follower MANFREDI. They later worked in Utrecht, where they painted religious and genre pictures. The school included Terbrugghen, Honhorst and Baburen; Franz Hals, Rembrandt and Vermeer were influenced by it.

Utrillo, Maurice (1883–1955), French artist, son of the painter Suzanne Valadon, best known for his poetic views of Paris (especially of Montmartre, whose popular romantic image his pictures helped to create).

Uttar Pradesh, state in N India; the capital is Lucknow. It is the fourth-largest state in India and the most populous. The region is mountainous to the N and S, enclosing a low-lying plain drained by the Jumara and Ganges rivers. The economy is based on agriculture; cereals, sugar cane, rice and pulses are grown. Industries include the processing of cotton and sugar. Area: 294,413sq km (113,673sq miles). Pop. (1976 est.) 96,200,000.

Utu, Sumero-Akkadian god of sun and of justice, traditionally represented by a sun disc. When depicted as a human being, he has rays issuing from his body.

U-2 Incident (1960), international incident precipitated by the shooting down of a US aircraft, a U-2, while on a photographic reconnaissance mission over the USSR. The pilot, Francis Gary Powers, was captured and confessed to spying. KHRUSHCHEV demanded an apology and the incident led to the disruption of the 1960 Summit Conference between the USA, USSR, Britain and France.

Utzon, Jørn (1918–), Danish architect. He is famous for his domestic architecture, but is internationally known as the designer of the recently opened and much admired Sydney Opera House in Australia.

UV Ceti, flare star in the southern constellation of Cetus. An M-type dwarf star, UV Ceti is the prototype of a class of variable stars whose luminosity increases

dramatically over a period of minutes as a result of intense flare activity. Its range of magnitudes is from 6.8 to 12. See also pp.990, 992, 993.

Uxmal, ancient MAYA ceremonial and administrative centre located on Mexico's Yucatán peninsula. Two pyramids and a grouping of four rectangular buildings called the Nunnery dominated the 60-hectare (150-acre) site. Uxmal flourished AD 600–900 but was abandoned c.1450.

Uzbekistan (Uzbekskaya SSR), constituent republic of the USSR, bordered in the S by Afghanistan; the capital is Tashkent. Settled since earliest times, the region was conquered by ALEXANDER THE GREAT and passed in succession to the Arabs, Seljuk Turks, Mongols, Timurids and Uzbek Turks before coming under Russian dominance in the 19th century. Much of NW Uzbekistan lies within the Kyzyl-Kum desert; the SE has fertile soil and both areas are extensively irrigated by the Amu Darya and Syr Darya rivers and a canal system. Cereals, cotton, grapes, tobacco and sesame are grown, livestock is raised in the W and the area is rich in zinc, copper, lead, tungsten and coal. Industries include the manufacturing of textiles, chemicals, machine tools and fertilizers. Area: 447,400sq km (172,740sq miles). Pop. (1980) 15,800,000. See also p.2153.

Uzbeks, Turkic-speaking people, originally of Persian culture, who form two-thirds of the population of UZBEKISTAN and who are the second-largest non-Russian people in the USSR. They took their name from Uzbeg Khan, a chief of the GOLDEN HORDE who died in 1340. By the end of the 16th century the Uzbeks had extended their rule to parts of Persia, Afghanistan and Chinese Turkistan. Their empire was never united and in the 19th century its various states were absorbed by Russia.

V

V, 22nd letter of the alphabet, derived (as were *f*, *u*, and *y*) from the Semitic letter *vaw*, meaning *hook*. It was identical with *u* in the Greek and Roman alphabets, the Romans using it both as a vowel (*u*) and a consonant (*v*), and was not differentiated from *u* in English until the Middle Ages. In modern English *v* has only the one consonant sound, as in *vole* and *wove*. See also pp.608–609.

Vaccination, injection of a VACCINE in order to produce IMMUNITY against a disease. The term most often refers specifically to the vaccination against SMALLPOX, in which vaccine is scratched into the skin producing a typical "pox" and leaving a small scar. See also pp.1073, 1088.

Vaccines, agents used to give immunity against various diseases without producing serious or fatal symptoms of the disease. The agent may be a live attenuated virus, which is low in virulence, or a dead one still able to induce the production of ANTIBODIES within the blood. The first of the vaccines to come into general use was the SMALLPOX vaccine, developed in the late 18th century. Vaccines against POLIOMYELITIS, yellow fever, rabies, measles and other bacterial and viral diseases are available. See also IMMUNE SYSTEMS; pp.1073, 1088.

Vaccinia virus, causative agent of cowpox, a minor pustular disease of cattle and human beings. It is related to the virus of SMALLPOX, a much more serious disease, and when cowpox is contracted by human beings the ANTIBODIES it raises in their blood immunizes them to smallpox. This is the basis of protection by VACCINATION, discovered and first carried out by Edward JENNER in 1796.

Vacuole, membrane-bound, fluid-filled cavity within the cytoplasm of a CELL, believed to discharge excess water or wastes. See also p.174.

Vacuum, region of extremely low pressure. Interstellar space is a high vacuum, with an average density of less than 1

molecule per cubic centimetre; the highest man-made vacuums contain less than 100,000 molecules per cubic centimetre.

Vacuum deposition, method of producing a thin adherent coating, generally of a metal, on plastics, ceramics and other materials. The object to be "plated" is placed in a vacuum chamber that also contains a length of metal wire inside a heavy-duty coil. When a high-voltage electric current is passed through the coil, the metal vaporizes and coats the object. See also p.848.

Vacuum pump, device that exhausts air from an enclosed space, which becomes a partial vacuum. The simplest vacuum pump has water or steam ejected through a nozzle into a chamber and then out. As it enters the chamber it forces air out thus creating a partial vacuum. See also p.848.

Vacuum tube. See VALVES, ELECTRONIC.

Vadim, Roger (1927–), French film writer and director, b. Roger Vadim Plemiannikov. His most famous films are *And God Created Woman* (1956), *Les Liaisons Dangereuses* (1959) and *Barbarella* (1968).

Vaduz, capital city of LIECHTENSTEIN, on the right bank of Upper River Rhine, approx. 80km (50 miles) SE of Zurich, Switzerland. Destroyed in a war between the Swiss and the Holy Roman Emperor, it was rebuilt in the early 16th century and became a possession of the Liechtenstein family in 1712. The main source of income is tourism. Pop. (1979 est.) 4,892.

Vagina, female sexual organ, which receives the penis during copulation. It is tube-like in shape, and its flexible muscle walls are capable of remarkable dilation during CHILD BIRTH. It opens into the cervix, or mouth of the womb. See also pp.164–165.

Vaginitis, acute infectious inflammation of the VAGINA usually caused by the protozoan *Trichomonas vaginalis* and transmitted during sexual intercourse.

Vagus nerve, tenth CRANIAL NERVE running from the brain to the abdomen. It contains motor, secretory and sensory fibres and supplies branches to the lungs, heart, stomach and other abdominal organs.

Vaihinger, Hans (1852–1933), German philosopher who, in his major book *The Philosophy of "As if"* (1911), extended the philosophy of Immanuel Kant in the direction of PRAGMATISM. He viewed life as a labyrinth of frustrations and in his work proposed a philosophy to make life bearable.

Vaillant, Edouard-Marie (1840–1915), French Socialist politician, influenced by Louis Auguste Blanqui. He was elected to the revolutionary Paris Commune in March 1871, but fled to England after the Commune was crushed, returning in 1880. He was elected to the National Assembly in 1893 and was a Socialist leader from 1898 to 1915.

Vaillant, Wallerant (1623–77), French portrait painter who settled in Amsterdam. He often worked in pastel and was among the first to make MEZZOTINTS, the art of which he learnt from Prince Rupert of the Rhine.

Vaishnavas, followers of one of the three main divisions of HINDUISM, who worship VISHNU and his incarnations Rama and Krishna. A major devotional volume is the *Bhagavad Gita*.

Valadon, Suzanne (1865–1938), French painter, the mother of Maurice Utrillo. She painted mainly nudes and portraits of working-class people, and a few still-lives and landscapes. Her style was influenced by DEGAS and GAUGUIN and her treatment, especially of the nude figure, was brutally realistic.

Valdés, Juan de (c.1498–1541), Spanish religious writer who, suspected by the Inquisition, went to Naples in 1530. He was influenced by the thought of ERASMUS and his major works include *Diálogo de la doctrina cristiana* (1529; Dialogue on Christian Doctrine) and *Diálogo de la lengua española* (1535; Dialogue on the Spanish Language).

Valdés Leal, Juan de (1622–90), Spanish BAROQUE painter. His early works were

Utrecht's cathedral towers above this sunny, tree-lined street and waterway.

Uttar Pradesh; gate of the Kaiser Bagh in Lucknow, the state's capital city.

Uzbek field-hands listening to readings given by a "missionary" denouncing Islam.

Edouard-Marie Vaillant; while an exile in England he worked with Karl Marx.

Valdivia, Pedro de

St Valentine; legend holds that both saints were beheaded, one in Rome, one in Terni.

Rudolph Valentino won many hearts both on screen and off in scenes such as this.

Valkyries; figures such as these were thought to give protection to warriors.

Valladolid's formal flower gardens offer shaded relaxation from the city's bustle.

monumental renderings of saints. The use of dramatic colour and vigorous brushwork was combined with morbid subject matter. Characteristics of his works are *Triumph of Death* (1672) and *Jesus Disputing with the Doctors* (1686).

Valdivia, Pedro de (c. 1498–1554), Spanish conquistador and founder of Santiago, capital of Chile, in 1541. He became Governor of Chile in 1548 and in 1550 began to conquer the south, where he founded the city of Concepción. He was killed during a revolt by Araucanian Indians.

Valdivia, province, city and river of Chile. The province stretches from the Andes to the w coast. The city, on the River Valdivia 18km (11 miles) from the ocean, is the capital of the province. Area: 18,473sq km (7,132sq miles). Pop. (prov.) (1972) 304,106; (city) (1975 est.) 89,500.

Valencia, city in E Spain and capital of the province of Valencia. It is situated on the Turia (Guadalaviar) River, 320km (200 miles) SE of Madrid. Originally settled by the Romans, it passed to the Visigoths in the 5th century AD, was conquered by the Moors in the 8th century and made the capital of the independent Moorish kingdom of Valencia in the 11th century. It was taken in 1328 by JAMES I of Aragon. An agricultural, industrial and communications centre, its manufactures include electrical equipment, chemicals, textiles and machinery. Pop. (1974) 713,026.

Valencia, city in N Venezuela, 120km (75 miles) NE of Caracas. It was the capital of Venezuela in 1812, and in 1830 when the country was proclaimed independent of Greater Colombia. Today it is a major industrial and transport centre. Manufactures include textiles, paper, cement, soap, furniture and vehicle spares. Pop. (1971) 367,171.

Valenciennes, town in N France, on the Escaut (Schelde) River, 46km (28 miles) SE of Lille. Its museum contains the works of French and Flemish artists including Peter Rubens and Jean Antoine Watteau, who was born in Valenciennes. The town's lace industry, which flourished in the 18th century, has been revived. Other industries include coal mining, textiles, machinery and steel tubing. Pop. 47,000.

Valency, or **valence**, measure of the "combining power" of a particular element, equal to the number of (single) chemical bonds one atom can form. Thus hydrogen has a valency of 1, carbon 4 and sulphur 2, as seen in compounds such as methane (CH₄), carbon disulphide (CS₂) and hydrogen sulphide (H₂S). Covalency refers to formation of covalent bonds; co-ordinate valency to co-ordinate bonds. See also p.892.

Valency electron, electron in an atom that is transferred or shared in the formation of a chemical bond. The valency electrons of a non-transition metal are those in the outermost shell (farthest from the nucleus), and in forming compounds the atom tends to attain the stable configuration of a noble gas. TRANSITION ELEMENTS use both the outer shell and the partly filled penultimate shell in chemical bonding. See also p.892.

Valency orbital, one of the outer atomic orbitals of an atom, containing the ELECTRONS that participate in chemical bonding. In producing IONIC BONDS electrons are lost or gained by valency orbitals. Covalent bonding involves sharing of electrons between atoms, a process often visualized as overlap of valency orbitals with the formation of molecular orbitals. See also p.892.

Valentin, Moise, or Le Valentin (c. 1591–1632), French painter. He studied in Rome and worked in a style derivative of CARAVAGGIO. He was a friend of Nicholas POUSSIN. His only documented work is the *Martyrdom of SS Processus and Martinian* (1630), but he is better known for his genre paintings of gypsies and soldiers.

Valentine, Saint, name of two legendary saints of Rome: Valentine of Terni and Valentine of Rome. The former, a Roman priest and physician, and the latter, the Bishop of Terni, were both martyred c.3rd century AC. They are commemorated on 14 Feb. ST VALENTINE'S DAY is not thought to be related to the saints but is possibly connected with the pagan Roman festival of Lupercalia.

Valentinian, name of three western Roman emperors. Valentinian I (321–75) was proclaimed emperor in 364, and ably defended the frontiers in Gaul and Britain. He was a Christian, and promoted religious toleration. His second son (371–92) became Valentinian II in 375 and ruled (through his mother, Justina) Italy, Africa and Illyricum while his elder brother Gratianus ruled the remainder until 383. Forced to flee from Italy in 382, he was restored to his position in 388. Valentinian III (419–55) was made emperor in 425. He was a weak ruler and lost control of N Africa to the VANDALS in 442, and suffered the invasions of ATILA in 451. Valentinian killed his general Aetius in 454 and was himself murdered by Maximus the following year.

Valentino, Rudolph (1895–1926), US silent film star, b. Italy. He exemplified the mysterious Latin lover, and his films included *The Sheik* (1921), *The Young Rajah* (1922), *The Eagle* (1925) and *Son of the Sheik* (1926). Valentino's early death from a ruptured ulcer caused widespread hysteria among his fans. See also pp.1752, 1752.

Valentinus (d.827), Pope (r.827). A cardinal deacon under Pope ST PASCHAL I, he was respected for his piety and generosity, but held office only for a short period, dying 40 days after his election.

Val of Glamorgan, county district in S SOUTH GLAMORGAN, Wales; created in 1974 under the Local Government Act (1972). Area: 296sq km (114sq miles). Pop. (1979 est.) 108,600.

Val of the White Horse, county district in W central OXFORDSHIRE, England; created in 1974 under the Local Government Act (1972). Area: 581sq km (224sq miles). Pop. (1979 est.) 96,800.

Valera, Eamon de. See DE VALÉRA, EAMON.

Valera y Alcalá Galiano, Juan (1824–1905), Spanish novelist and critic. He held various diplomatic posts in Europe and the USA and wrote many letters that formed the basis of his novels, such as *Mariquita y Antonio* (1861).

Valerian, Publius Licinius (d.260), Roman emperor (253–260). In 257 he revived the persecution of the Christians, who were required to perform public acts of worship to the state gods; severe penalties were ordered for those who refused. See also pp.1246, 1246.

Valerian, or garden heliotrope, plant native to Europe and N Asia and naturalized in the USA. It has pinkish or pale purple flower clusters. Height: to 1.2m (4ft). Family Valerianaceae; species *Valeriana officinalis*.

Valerius Flaccus, Gaius (fl. 1st century AD), Latin poet of wealth and position. A contemporary of VESPASIAN and TITUS, he dedicated his unfinished epic, *Argonautica*, to Vespasian.

Val Royal, county district in central CHESHIRE, England; created in 1974 under the Local Government Act (1972). Area: 384sq km (148sq miles). Pop. (1979 est.) 110,000.

Valéry, Paul (1871–1945), French symbolist poet and critic. Influenced by Stéphane MALLARMÉ, his poems, including *La Jeune Parque* (1917) and *Charmes* (1922), are characterized by lyricism and abstract thought. His critical works include *La Soirée avec Monsieur Teste* (1906) and *Introduction à la Méthode de Léonard de Vinci* (1895). He was elected to the French Academy (1925) and was given a personal chair of poetry at the Collège de France, Paris (1937).

Valhalla, in Scandinavian mythology, the Hall of the Slain, where chosen warriors caroused with the god ODIN. From this glittering palace with golden walls and ceiling of burnished shields, the valiant set out each morning to battle with each other and returned to feast on boar's meat.

Validity, state or condition of a proposition that makes it logically irrefutable or correctly derived from its premises. If an inference has a conclusion that is true, and is false when one or more of its premises

are false, it is valid. See also STATISTICS.

Valine, 2-aminoisovaleric acid, a white crystalline essential AMINO ACID found in PROTEINS.

Valium, proprietary name for DIAZEPAN, a mild sedative drug used in the treatment of anxiety and as an anticonvulsant in EPILEPSY.

Valkyries, in Norse mythology, warlike handmaidens of the god ODIN who selected and conducted to VALHALLA those slain heroes who merited a place with him. They were armed and mounted and in some accounts rode to the battlefield, sometimes guarding their favourites from death and condemning others to death.

Valla, Lorenzo (1405–57), Italian scholar who translated HERODOTUS and THUCYDIDES into Latin for Pope NICHOLAS V. His masterpiece, *De elegantia latinae linguae* (1471), is a brilliant defence of classical Latin. *De voluptate ac de vero bono* (1431) deals with EPICUREANISM and STOICISM and advises the assimilation of pleasure into the Christian experience. See also p.1380.

Valladolid, city in NW central Spain, on the River Pisuerga, 160km (100 miles) NW of Madrid; capital of Valladolid province. The city was liberated from the Moors by Castilian kings in the 10th century. In 1469 it was the wedding-place of FERDINAND and ISABELLA. There is a 12th-century Romanesque church, an art museum, the church of Santa Ana (containing paintings by GOYA), and a monument to Christopher COLUMBUS, who died in the city in 1506. Valladolid's university, founded in 1346, is one of the oldest in Spain. Today its industries produce chemicals, flour, metalwork and textiles. Pop. (prov.) (1970) 413,000; (city) (1974) 275,012.

Valle Inclán, Ramón María del (1869–1936), Spanish novelist, poet and dramatist. His careful use of detail is seen in his vivid description of Galician countryside. Galicia is also used as the setting for several of his plays, notably *Divinas Palabras* (1920), which describes the brutal responses to individuality in a peasant community. Both plot and characters are distorted in *Lights of Bohemia* (1923), a play that heralded the Theatre of the Absurd.

Vallejo, César (1893–1938), Peruvian poet concerned with the sufferings of the poor and dedicated to the cause of social progress. He went to Europe in self-imposed exile in 1923 and *Poemas humanos*, published in 1939, was written during this time.

Valles, Jules (1832–85), French novelist and journalist. Valles was involved in revolutionary activities in Paris, imprisoned (1853) and exiled (1871–80) for his part in the COMMUNE OF PARIS. His most important work is the autobiographical trilogy *Jacques Vingtras*, published between 1879 and 1886. He founded *Le Cri du Peuple* (1871), which became France's leading Socialist newspaper.

Valles Marineris. See MARS.

Valletta, port and capital city of Malta, on the NE coast of the island. The city was founded in the 16th century and named after Jean Parisot de La Valette, Grand Master of the Knights of Malta. The city was badly damaged by air raids during WWII. In the city are the Royal University of Malta (1592) and the Cathedral of San Giovanni (1576). Industries: shipbuilding, tourism. Pop. (1979) 14,042.

Valley Forge, camp site 34km (21 miles) NW of Philadelphia where American soldiers under George Washington withstood the winter of 1777–78, living in log huts and with little food and inadequate clothing. The number of ragged, half-starved men dwindled to about 11,000, held together by their loyalty to Washington and the patriotic cause.

Valley of the Kings, narrow valley in W Thebes, Egypt, also called Biban al-Muluk. It contains 60 tombs of almost all the pharaohs of the 18th, 19th and 20th Dynasties. Although hidden, all the tombs except one were plundered in ancient times. TUTANKHAMEN's tomb was found and opened in 1922 by Howard CARTER.

Valley of the Queens, narrow valley in W

Thebes, Egypt, also called Biban al-Harim. It contains 70 uninscribed tombs of the queens and princes of the 19th and 20th Dynasties.

Valmiki (fl. 300 BC), Indian poet who is generally thought to be the author of the epic *Ramayana*. In seven books it deals with the story of RAMA: his courtship, marriage, loss of his wife and her subsequent recapture and the reunion of his family.

Valois, Dame Ninette de. See DE VALOIS, DAME NINETTE.

Valois Dynasty, royal house of France (1328–1589). Valois kings survived the HUNDRED YEARS WAR (1337–1453) and challenges by Burgundian and Armagnac rivals and consolidated royal strength over feudal lords. They established the Crown's sole right to tax and to wage war and extended parliaments throughout France. Louis XI (r.1461–83) is considered the founder of French royal absolutism. The direct Valois line ended (1498) with Charles VIII, when the dynasty was continued by Louis XII (Valois-Orléans) and, after his death (1515), by Francis I and the Valois-Angoulême line. With the death in 1589 of Henry III, the house of Bourbon, descending from a younger son of Louis IX, ascended the throne in the person of Henry IV. See also pp.1346–1347, 1374, 1375.

Valparaíso, port in central Chile; capital of Valparaíso province; founded in 1536. The city was heavily damaged by earthquakes in 1906 and 1971. It is Chile's chief port and is also a cultural centre, with two universities and museums of fine arts and natural history. Industries include chemicals, textiles, sugar refining, vegetable oils and paint. Pop. (1975) 248,972.

Value added tax. See VAT.

Valve, in music, piston-like mechanism in the tubes of all modern BRASS instruments except the slide trombone and bugle. Invented about 1815, valves are used to alter the length of the air column, permitting chromatic notes. There are usually three valves, lowering the pitch by a semitone, a whole tone and a minor third.

Valve, in a petrol or diesel ENGINE, device that cyclically opens and closes the intake and exhaust parts of an engine's combustion chamber or cylinder. It consists of a disc attached to a shank and held against a seat by a spring. A rotating cam pushes on the bottom of the shank, raising the valve from its seat and permitting gas to flow past it. See also p.426.

Valves, in anatomy, "gates" that prevent the backward flow of blood and lymph in the HEART, veins and lymph vessels. Heart valves separate and connect the two atria and ventricles, the right ventricle and the pulmonary artery, and the left ventricle and the aorta. The various sphincters of the body, as in the stomach, intestine, bladder and anus, are circular muscles which also act as valves, opening and closing periodically to allow materials through. See also pp.152–153.

Valves, electronic, or vacuum tubes, devices once fitted in radios, now largely replaced by TRANSISTORS, except in high-power circuits such as amplifiers and rectifiers. A valve contains two or more electrodes (current-carrying "plates"). When connected to a source of electricity, the negative electrode (cathode) becomes heated and emits electrons into the partial vacuum inside the valve. The electrons move towards the positive electrode (anode). One or more intermediate electrodes, called grids, can be interposed between the cathode and the anode, to influence the rate of electron emission – i.e. the current flowing in the valve. A small increase in grid potential (voltage) causes a large increase in cathode current. In this way, current control and amplification is possible. See also p.884.

Vampire, in legend, a corpse that lives at night and sucks the blood of the living to sustain itself. The victim in turn becomes a vampire. The monster can be killed by driving a wooden stake through its heart. Bram Stoker's *Dracula* (1897) drew on the legend of the vampire to produce a masterpiece of horror.

Vampire bat, small brown bat that lives in

tropical and subtropical America. It slices the skin of resting animals and human beings with its sharp teeth then laps up their blood. Length: 7.6cm (3in); wingspan 30cm (12in). Family Desmodontidae; species *Desmodus rotundus*. See also pp.93, 315.

Vanadium, metallic element (symbol V) of the first transition series, discovered in 1801. The metal is used in special steels, and vanadium pentoxide is an important oxidation catalyst. Chemically vanadium reacts with oxygen and other non-metals at high temperature. Properties: at.no. 23; at.wt. 50.9414; s.g. 6.1 (18.7°C); m.p. 1,890°C (3,288°F); b.p. 3,380°C (6,116°F); most common isotope V⁵¹ (99.76%). See also TRANSITION ELEMENTS.

Van Allen, James Alfred (1914–), US physicist. During WWII he helped to develop the radio proximity fuse. After the war he supervised experiments with captured German V-2 rockets, leading to research with space satellites and his discovery of the two zones of radiation encircling the Earth, commonly known as the VAN ALLEN RADIATION BELTS.

Van Allen radiation belts, two doughnut-shaped regions of radiation trapped by the Earth's magnetic field in the upper atmosphere, named after James A. VAN ALLEN, the US physicist who discovered them in 1958. The belts contain particles carrying energies of from approximately 10,000 electron volts to several million electron volts. The inner belt (of protons) centres about 3,220km (2,000 miles) above the Equator; the outer belt (of electrons) centres at about 18,500km (11,500 miles). See also p.197.

Vanbrugh, Sir John (1664–1726), outstanding English BAROQUE architect and dramatist, who worked with and was influenced by Sir Christopher WREN. Having taken London by storm with his witty RESTORATION comedies *The Relapse* (1696) and *The Provok'd Wife* (1697), he turned to architecture in 1699, when he designed Castle Howard, Yorkshire. In 1702 he became, with no training, Wren's chief colleague. Blenheim Palace (1705–20), Vanbrugh's masterpiece and the culmination of English Baroque, exemplifies his mature style. See also pp.1431, 1447.

Van Buren, Martin (1782–1862), 8th US President (1837–41) and one of the founders of the DEMOCRATIC PARTY. During his administration the country suffered its first economic depression (the Panic of 1837), the result of uncontrolled land speculation. Although millions suffered, Van Buren was adamant in denying government aid. He stood for re-election (1840) on Democratic policies but was defeated and in 1848 made another unsuccessful attempt at the presidency.

Vancouver, George (1757–98), British navigator and explorer. He was made commander of his own expedition in 1791 and ordered to survey the NW coast of North America and to search for a passage from the Pacific to Hudson Bay. He made a detailed survey and found no passage to the E. He returned by going around Cape Horn in 1794.

Vancouver, port in s British Columbia, Canada, on the s shore of Burrard Inlet; third-largest city and principal Pacific port of Canada. The area was first explored in 1792 by Capt. George Vancouver, and the first European settlement was established in 1865 and known as Granville; it was renamed Vancouver in 1886. It includes the University of British Columbia (1908) and Simon Fraser University (1963). Exports: wood products, grain, fish. Industries: timber, pulp and paper, tourism, food processing, chemicals, fishing, shipbuilding, meat packing. Pop. (1976) 410,188.

Vancouver Island, island off the coast of British Columbia, Canada, in the Pacific Ocean. Capt. James Cook visited the island in 1778; it became a British Crown colony in 1849 and part of British Columbia in 1866. Industries include timber, fishing, tourism and coalmining. Area: 32,137sq km (12,408sq miles). Pop. (1970 est.) 375,000.

Vandals, ancient Germanic people. Their

existence in E Europe is recorded during the 1st century AD; early in the 5th century they crossed the Rhine to escape the Huns. They passed through Gaul and Spain, and invaded N Africa in 429. From there they raided the W Mediterranean, briefly capturing Rome in 455. They were Arian Christians, hostile to the Catholic Church. In 533 a Roman army sent by JUSTINIAN destroyed their kingdom. See also pp.1247, 1270, 1270–1271.

Van de Graaff generator, machine that generates high voltages by concentrating electrical charges on the outside of a hollow conductor. It is used as the voltage supply for a type of electrostatic ACCELERATOR (the Van der Graaf accelerator). Positive (or negative) charges, sprayed from a set of high-voltage points on to a moving belt, are conveyed into a large hollow metal sphere to which the charges are carried by a second set of points. A voltage of about 50,000 volts applied to the points can generate up to 10 million volts.

Vanderbilt, Cornelius (1794–1877), US railway owner and financier. He began as a boy running a ferry service in New York and later established a steam boat company, with which he made his fortune. After the California gold rush of 1849, he ran a shipping line between New York and San Francisco. During the American Civil War, he built up a railway empire by gaining control of existing railways and in 1873 he connected New York and Chicago directly by rail.

Vanderlyn, John (1775–1852), US NEO-CLASSICAL painter in historical landscapes and some portraits. He lived mostly in Paris from 1796 to 1815, where he became famous for his *Marius amid the ruins of Carthage* (1807) and *Ariadne Asleep on the Isle of Naxos* (1812).

Van der Post, Laurens Jan (1906–), South African writer. He contributed in Afrikaans to the journal *Voorslag*. On the outbreak of WWII he joined the British Army, and served in the Far East. His novels include *In a Province* (1934), *Flamingo Feather* (1955), *The Hunter and the Whale* (1967) and *A Story Like the Wind* (1972).

Van de Velde, family of 17th-century Dutch artists. Jan (1593–1641) and his cousin Esaias (c.1591–1630) painted genre scenes and landscapes. Willem the elder (1611–93), the brother of Esaias, was an important marine painter; he depicted the victories of the Dutch fleet until 1672 when he moved to England. His son Willem the younger (1633–1707), worked with him on many paintings and later became court painter to Charles II. He was the leading marine painter in the England of his time.

Van der Velde, Henri (1863–1957), Belgian ART NOUVEAU architect, designer and teacher. His Bloemenwerf House at Uccle, near Brussels (1895), designed for his own family use, was influenced by William Morris and the English ARTS AND CRAFTS MOVEMENT; it heralded art nouveau. He moved to Germany in 1899 and in 1905 designed the new School of Applied Arts at Dessau, of which he was the principal.

Van der Waals, Johannes Diderik (1837–1923), Dutch physicist who was awarded the 1910 Nobel Prize in physics for his work on gases and the gas equation which he derived. The ideal gas equation is $PV=RT$ (where P is the pressure, V the volume, T the absolute temperature of the gas and R is the gas constant). The Van der Waals equation is $(P + a/V^2)(V - b) = RT$, where a and b are the Van der Waals constants. This takes into account the volume occupied by the gas molecules and their inter-molecular attraction, which were ignored by the KINETIC THEORY of gases. See also IDEAL GAS LAW.

Van der Waals forces, forces of attraction which contribute towards cohesion between neighbouring atoms or molecules. They are named after Johannes VAN DER WAALES, who investigated such phenomena during the 19th century. Van der Waals forces are caused by the similar movements of electrons in neighbouring atoms or molecules.

Van der Waals forces

Valparaíso, the most important port on South America's Pacific coast.

Vampire bats, carriers of rabies, bite into their prey with razor-like teeth.

Sir John Vanbrugh was a notable playwright, as well as an architect.

Martin Van Buren was unpopular due to economic problems during his presidency.

Van Diemen's Land

Van Diemen's Land; a drawing by Abel Tasman, showing Dutch ships and native boats.

Vanilla plants live about ten years, producing their first crop after three.

Vanity Fair, like most novels of the time, was published in monthly parts.

Lord Vansittart during the Munich crisis, 1938. His warnings went unheeded.

Van Diemen's Land, original name of Tasmania. It was discovered by Abel Tasman in 1642 and named in honour of Anthony van Diemen, the Governor-General of the Dutch East Indies. It became part of New South Wales in 1803, was made a separate colony in 1825 and given self-governing status in 1850. Van Diemen's Land was renamed Tasmania in 1855. See also p.1602.

Van Dongen, Kees. See DONGEN, KEES VAN.

Van Dyck, Sir Anthony (1599-1641), Flemish portrait and religious painter who studied in RUBENS' studio before travelling abroad, first to England in 1620. In the following year he went to Italy, where he painted many BAROQUE portraits of the Genoese nobility which show his great gift for aristocratic portraiture. He was invited to England in 1632 by Charles I, who made him court painter and a knight. He was overwhelmed with commissions and his many depictions of English aristocrats greatly influenced future English portrait painting. See also pp.1422, 1430-1431, 1430.

Vane, the Younger, Sir Henry (1613-62), English politician. He went to Massachusetts in 1635 and became governor (1636-37). As Leader of the House of Commons in 1643 he negotiated the Solemn League and Covenant; he served in the Rump Parliament and opposed its dissolution by Oliver CROMWELL in 1653. He was executed after the Restoration.

Vanern, largest lake in Sweden, in the sw of the country. It is fed by the River Klarälven and drained by the Göta älv sw into the Kattegat. The lake is crossed by the Göta Canal. Pulp and paper mills line the shores. Area: 5,584sq km (2,156sq miles).

Van Eyck. See EYCK, VAN.

Van Gogh, Vincent. See GOGH, VINCENT VAN.

Vanilla, climbing orchid native to Mexico. The vines bear greenish-yellow flowers that produce seed-pods 20cm (8in) long which are the source of the flavouring vanilla, which is prepared by drying and curing. Family: Orchidaceae; species: *Vanilla planifolia*.

Vanini, Lucilio (1585-1619), Italian free-thinker, pseudonym Julius Caesar. He studied at Naples and Padua and took holy orders, but preached a modern anti-religious form of pantheism. He was arrested for atheism and witchcraft and later burnt at the stake. His works include *De Admirandis Naturae Arcanis* (1616).

Vanir, in Norse mythology, group of mature gods, the patrons of fertility and wealth who were opposed to the Aesir. They consisted of Njörðr, the water god; his wife, Skadi; his son, Frey; and his daughter, Freya.

Vanity Fair, a Novel without a Hero (1848), novel by William Makepeace THACKERAY. It vividly portrays the lives and loves of his main female characters, Becky Sharp and Amelia Sedley, with those of a number of goddesses, self-satisfied and pompous men.

Van Loo family, French painters of Flemish descent. Jean Baptiste (1684-1745), a portraitist, was acclaimed in Paris and London for his paintings of Louis XV and Sir Robert Walpole. Carle (1705-65), brother of Jean-Baptiste, became principal painter to Louis XV in 1762 and his work was mainly decorative. Louis Michel (1707-71), son of Jean-Baptiste, was court painter to Philip V of Spain (1736-52).

Vansittart, Robert Gilbert (1881-1957), British diplomat. He entered the Foreign Office in 1902 and was Private Secretary to Lord Curzon from 1920 to 1924. As Permanent Under-Secretary for Foreign Affairs between 1930 and 1938, he warned against the growing military power of Germany but his advice went unheeded and in 1938 he was demoted, becoming diplomatic adviser to the government.

Vant' Hoff, Jacobus Henricus. See HOFF, JACOBUS HENRICUS, VANT'.

Vantongerloo, Georges (1886-1965), Belgian sculptor, a founder member of the de STIJL movement. After 1938 he became

interested in space and movement, and used wire or clear plastic in curved structures. His *Composition* (1920) is made of concrete.

Van Vollenhoven, Tom (1935-), South African rugby wing-threequarter of startling speed. He played seven times for South Africa (1955-56) at rugby union, before changing to rugby league and playing in Britain for St Helens, for whom he scored 381 tries in 393 matches.

Vaporization, or volatilization, the conversion of a liquid or solid into its vapour, eg the heating of water to make steam. Solids such as ammonium chloride, when heated, pass directly into the vapour state, a process known as SUBLIMATION. Vaporization of a solid or liquid can also be achieved by lowering the surrounding pressure or by EVAPORATION, a process which in nature is caused on a large scale by the combined effects of sun and wind.

Vapour, fundamentally the same thing as a gas, but used to mean the gaseous state of a material which is more commonly found at standard temperatures and pressures as a solid or liquid.

Vapour pressure, the pressure exerted by a vapour in equilibrium with its liquid or solid. It is an important property in chemical analysis, because when a solid is dissolved in a liquid, the vapour pressure of the liquid is reduced by an amount proportional to the solid's molecular weight.

Varanasi, also known as Benares and Banaras, city in Uttar Pradesh state, N India, on the River Ganges, about 640km (400 miles) WNW of Calcutta. BUDDHA is reputed to have preached his first sermon near by, and Varanasi is considered by Hindus to be a holy city. It is a centre of pilgrimage with about 1,500 temples and mosques. Products include silk brocade and brassware. Pop. (1971) 583,856.

Vardon, Harry (1870-1937), British golfer. He won six British Open Championships and the 1900 US Open, and with fellow British professionals James Braid and John Henry Taylor formed the "Great Triumvirate" that dominated golf in Britain for 20 years until 1914.

Varenus, Bernhardus, or Varen, Bernhard (1622-50), German geographer. He is best known for his *Geographia generalis* (1650), in which he attempted to structure geography on a scientific basis and organize and co-ordinate its various branches. He developed the concept of what is now known as regional geography.

Varese, Edgard (1885-1965), French composer, a leading advocate of 20th-century experimental music. He lived in the USA after 1915 and composed *Hyperprism* (1923) for wind instruments and percussion, *Ionisation* (1931) for two groups of percussion instruments and *Deserts* (1954) for tape-recorded sound. He concentrated on ELECTRONIC MUSIC after the early 1950s. See also p.1754.

Vargas, Getúlio Dornelles (1883-1954), twice President of Brazil. He seized the presidency in 1930, establishing dictatorial control and encouraging the country's economic growth, but was deposed in 1945 in favour of a democratic constitution. Re-elected in 1951, he was forced to resign three years later under threat of impeachment, and committed suicide.

Variable, in mathematics, symbol used to represent an unspecified quantity. Variables are used to express a range of possible values, eg in the equation $(x+1)^2 = x^2 + 2x + 1$, x is the variable.

Variable, in statistics, item that may change or vary unlike a constant, which maintains a given value. The mark given to each student in a class is a variable; it changes from student to student.

Variable star, any star that exhibits regular or irregular fluctuations in brightness. Regular variables include eclipsing variables and the pulsating stars of the CEPHEID or RR LYRAE type. Irregular variables include NOVAE and flare stars.

Variation, in biology, difference between members of the same SPECIES due to heredity or environment. The difference may be in type of reproduction, fertility or physical appearance. See also ADAPTATION; EVOLUTION.

Variation, in music, a variety of treat-

ments upon a single theme, by such means as simple elaboration, change of KEY, change of TIME SIGNATURE and INVERSION. **Varicella**. See CHICKEN POX.

Varicose veins, VEINS that are distorted and distended with blood. They can occur anywhere in the body, but are usually found in the legs. The condition arises from the failure of the VALVES in the veins. Treatment includes wearing elastic-type stockings or surgical stripping of the affected veins. See also p.1067.

Variola major. See SMALLPOX.

Variscite, glassy white to green phosphate mineral, hydrous aluminium phosphate with iron impurities found with aluminium-rich rocks near the Earth's surface. It occurs as crystals in the orthorhombic system. It resembles TURQUOISE, but is greener, and is used in jewellery. Hardness 3.5-4.5; s.g. 2.5.

Varley, Frederick Horsman (1881-1969), Canadian artist, b. Britain, who settled in Canada in 1912. He is known chiefly for his penetrating portraits and landscapes which owe much to EXPRESSIONISM.

Varna, port in E Bulgaria, on the Black Sea; founded in the 6th century BC. It came under Turkish rule in 1391. It was ceded to Bulgaria by Turkey in 1878. Industries include textiles, flour-milling, ship building and the manufacture of diesel engines. Pop. (1978) 278,827.

Varnish, solution of a resin in a solvent applied as a film to wood or metal to give a hard glossy transparent protective coating. Pigments may be added for colour. Film formation is the result either of solvent evaporation or of oxidation or polymerization. Shellac in methanol or ethanol (french polish) and cellulose ester in ketones are examples of solvent-evaporation varnishes.

Varro, Marcus Terentius (116-27 BC), Roman scholar and writer. Serving as a deputy of POMPEII in Spain, he was treated kindly by CAESAR when Pompeii was defeated and was made director of the public library in Rome. QUINTILIAN called him "the most erudite Roman of them all". Varro was a prolific writer of historical, biographical, philosophical and geographical treatises.

Varuna, in Vedic mythology, the supreme ruler, guardian of cosmic order, omniscient, omnipresent and possessed of universal power. He is worshipped as the upholder of moral order who presides over the sky, being particularly identified with the moon.

Varve, term applied to a layer of sediment deposited in a single year in a body of still water. Specifically a varve consists of two layers of sediment, a coarse layer deposited in the summer and a fine layer deposited in the winter in glacial melt-water lakes. Varves have been used to date the age of Pleistocene glacial deposits. See also pp.268-269.

Vasa dynasty (1523-1818), royal dynasty of Sweden. It was established after Gustav Eriksson, a relative of the Stures, a noble Swedish family, revolted against Denmark in 1520 and ended the union. He was elected king in 1523 and moulded Sweden into a nation, stabilized state finances and confiscated property belonging to the Roman Catholic Church, thus precipitating the Reformation in Sweden. The dynasty ended when Jean Bernadotte, one of Napoleon's marshals, was chosen to rule upon the sudden death of the heir to the throne. Bernadotte succeeded to the throne as Charles XIV of Sweden and Norway in 1818.

Vasarely, Victor de (1908-), Hungarian painter who worked in Paris after 1930. His early work was influenced by CONSTRUCTIVISM. His paintings, with their emphasis on exciting spatial and optical effects, anticipated OP ART. By the 1960s there was a kinetic effect in his works. Among his paintings is *On* (1968). See also p.1763.

Vasari, Giorgio (1511-74), Italian painter, architect and art historian. He painted in the mannerist style, mainly in Florence and Rome, but was more well known in his day for his architectural works, which include the Palazzo dei Cavalieri, in Pisa. His fame today rests on

his history of Italian art. *The Lives of the most excellent Painters, Sculptors and Architects* (1550). See also p.1398.

Vasco da Gama. See GAMA, VASCO DA.

Vasconcelos, José (1882–1959), Mexican statesman and intellectual. He dedicated himself to raising the cultural level of his country, emphasizing public education and government patronage of the arts. He was also a prolific writer, and is best known for a number of philosophical, sociological and historical works, and for his four autobiographical volumes (1935–39).

Vascular plant, or tracheophyte, plant with vessels or ducts to carry water and food materials within it. All higher plants – FERNS, CONIFERS and FLOWERING PLANTS – have a vascular system (XYLEM and PHLOEM). This system exists in roots, stems and leaves. See also pp.356–357.

Vas deferens, long narrow tube that carries SPERM from the TESTES, around the bladder, and opens into the seminal vesicles, where the sperm are stored until ejaculation. See also VASECTOMY: p.164.

Vasectomy, method of sterilizing the male, in which the VAS DEFERENS, through which sperm pass from the testes to the penis, is severed. It is an increasingly acceptable form of BIRTH CONTROL in men.

Vasoconstrictor, any substance, natural or artificial, which causes constriction of blood vessels. An example is the hormone VASOPRESSIN. Vasoconstrictors are administered to reduce the peripheral circulation, so raising BLOOD PRESSURE.

Vasopressin, HORMONE secreted by the posterior lobe of the PITUITARY GLAND situated under the brain. It is also called antidiuretic hormone or ADH, its action being to prevent excessive water loss by reabsorption of water in the KIDNEY tubules during the making of urine.

Vassal, in the Western European FEUDAL SYSTEM, a free man who bound himself to another (the lord) by an oath of FEALTY for mutual protection. In exchange for certain obligations, such as military service, he received direct maintenance in the lord's household, or a benefice or FIEF to work himself.

Vasteras, inland port in E Sweden, at the mouth of the River Svartan on Lake Malaren. Founded in 1100, it was an important medieval city and the scene of several diets, including the diet of Vasteras Recess in 1527 which formed the Lutheran state Church, and the diet of 1544 which made the Swedish throne hereditary. Exports: iron ore, timber. Industries: metal goods, electrical goods, textiles, glass. Pop. 118,044.

Vastitas Borealis. See MARS.

VAT, Value Added Tax, indirect tax in Britain, introduced in 1971. It consists of a series of *ad valorem* taxes levied on goods in the various stages of their manufacture at the point of sale: raw material to the manufacturer, wholesale product to the retailer, and retail product to the consumer.

Vatican, The, residence of the Pope in Rome. It is said that a papal residence was first erected on the site near the basilica of St Peter by Pope Symmachus (498–514). Innocent III rebuilt (c.1200) an earlier residence and, after the return from the BABYLONIAN CAPTIVITY in 1377, it became the main residence of the head of the Roman Catholic Church. See also VATICAN CITY.

Vatican City, independent sovereign state existing as an enclave within Rome. It is the official home of the Pope and the centre of the ROMAN CATHOLIC CHURCH. The area was used as a burial ground until AD 59 when NERO made it a garden. The first papal residence was established there in the 5th century. Vatican City did not achieve full independence until 1929. Area: 44 hectares (109 acres). Pop. (1982 est.) 1,000. See p.2168.

Vatican Council, Second. See SECOND VATICAN COUNCIL.

Vatican Councils, series of two ECUMENICAL COUNCILS of the Roman Catholic Church. The First Vatican Council (Vatican I), held in 1869–70, was the twentieth ecumenical council, according to the reckoning of the Church. Convened by Pope

PIUS IX to deal with a variety of subjects, such as the effects of rationalism and liberalism, ecclesiastical discipline, canon law, Church-state relations etc the council is mainly associated with the definition of the dogma of papal INFALLIBILITY. During a recess, Piedmontese troops occupied Rome and ended the temporal power of the Pope there; Pius IX then suspended the council. The SECOND VATICAN COUNCIL (Vatican II), held in 1962, dealt with the Church's role in modern society.

Vauban, Sébastien le Prestre, Marquis de (1633–1707), French military engineer, royal engineer (1655–1703) and marshal (1703–07). During the wars of Louis XIV he conducted a long series of sieges and built and improved many fortresses.

Vaudeville, popular US equivalent of the British music hall variety entertainment. Its rise and fall followed the same pattern as its European counterpart, having its heyday in the late 19th century and eventually succumbing to the cinema's popularity.

Vaughan, Henry (c.1621–95), English poet, b.Wales. After studying law he turned to medicine and became a doctor in Wales. One of the metaphysical poets, his best work was inspired by religious experience and includes *Poems* (1646) and *Silx Scintillans* (1650–55). See also METAPHYSICAL POETRY.

Vaughan Williams, Ralph (1872–1958), British composer. His interest in English folk music is apparent in his three *Norfolk Rhapsodies* (1905–07) and his instrumental arrangement *Fantasia on Greensleeves* from the opera *Sir John in Love* (1929). He also used elements of English Tudor music in his *Mass in G Minor* (1923) for unaccompanied chorus. He wrote nine symphonies, the best known of which are the *Sixth Symphony* (1947) and the *Sinfonia Antartica* (1952), based on his music for the film *Scott of the Antarctic*. See also p.1754.

Vault, in architecture, a curved, often ribbed ceiling constructed from bricks, stone blocks or wooden beams, which form a rigid structure. The ancient Egyptians used brick vaults for their drainage systems. During the Middle Ages the technique became complex, with varied constructions. See also pp.1332–1333, 1352–1353.

Vaulting, exercise in gymnastics. The apparatus used is called a horse; men vault its length and women the breadth. Vaults are judged on the first flight from take-off (from a small springboard), the positioning of the hands on the horse, the flight from the horse until and including landing, and the difficulty of the vault. The whole performance takes only a few seconds.

Vauxhall, district of the borough of Lambeth, London, S of the River Thames. The name comes from Falkes Hall, from Falkes de Bréauté, the 13th-century Lord of the Manor. Gardens laid out there in 1661 became fashionable in the 18th century but were closed in 1859.

Vavassor, feudal tenant or vassal, indicating, in Normandy, a man who owned less land than a BARON, but who nevertheless owed some military service. The term passed into English usage after 1066 and by the 12th century, as the status of barons rose, so too did the vavassors and the title was replaced by that of KNIGHT.

Vayu, in Vedic mythology, the god of the atmosphere, wind and breath of life. He is gentle and one of the Vedic triad, the other two being Agni, the fire god, and Surya, the sun. In mythology he is king of the northwest quarter and father of HANUMAN and is symbolized by an antelope.

Vazov, Ivan (1850–1921), Bulgarian poet, novelist and playwright. Known as Bulgaria's national poet, he wrote the revolutionary's battle hymn *Pravopretis i gusla* (1876) and recorded his country's struggle for independence against the Turks in the novel *Pod Igoto* (trans. *Under the Yoke*, 1894) and the poems *Tăgite na Balgariya* (1877).

Vázquez, Horacio (1860–1936), three times President of the Dominican Republic between 1899 and 1930. He retired from a second term as President during the US occupation of the Republic from

1916 to 1924, but emerged as the dominant figure when US forces withdrew. Rafael Trujillo forced him out of office in 1930.

VD. See VENEREAL DISEASE.

Veal, the meat of the calf, which has little fat and a high proportion of muscle, and so tends to be lean, if dry. Larger cuts of veal may be roasted with added fat; small pieces are usually braised to prevent loss of moisture. See also pp.730, 730.

Veblen, Thorstein Bunde (1857–1929), US economist. He originated the institutionalist school of economics, studying the economy as a whole and institutions and their role in the economic system. His most famous books are *The Theory of the Leisure Class* (1899), in which he criticized conspicuous consumption, and *The Theory of Business Enterprise* (1904).

Vecchieta, Lorenzo di Pietro (c.1412–80), Italian sculptor of the Siennese School who also worked as a painter and architect. He was a pupil of Sassetta, and was also greatly influenced by DONATELLO, who visited Siena in 1457. His *Assumption* and *St Catherine* (both c.1462) exemplify his expressive, naturalistic style.

Vector, in mathematics, quantity that has both a magnitude and a direction, as contrasted with a SCALAR which has magnitude only. For example, the VELOCITY of an object is specified by its speed (how fast it is moving) and the direction in which it is moving; similarly, a force has both magnitude and direction. Mass is a scalar quantity, but weight (the force of gravity on a body) is a vector.

Vector, in disease, any agent that carries an infectious agent from one host to another. It may be an insect such as a mosquito or flea, or an inanimate object such as a cup. It also may serve as an intermediate host for the infectious agent.

Vector analysis, study of the mathematical properties of VECTORS. The addition of two vectors is the diagonal of a parallelogram formed with the two vectors as adjacent sides. Multiplication of a vector by a SCALAR *a* gives a vector with the same direction but its magnitude multiplied by *a*. Two vectors can also be multiplied; this may occur in two ways: the scalar, or dot product of vectors *a* and *b* (written *a · b*) is a scalar given by *ab cos θ*, *θ* being the angle between the vectors and *a* and *b* being their magnitudes; the vector, or cross product (written *a × b* or *a × b*), is a vector given by *ab sin θ*, directed at right-angles to the plane of *a* and *b*.

Vedanta, in HINDUISM, the Conclusion to the sacred literature, the Vedas; the best-known and most popular form of Indian philosophy. It was expounded by the 7th–8th century philosopher Sankara, and holds that the natural world is an illusion. There is only one self, Brahman-Atman; ignorance of the oneness of the self with Brahman is the cause of rebirth. Vedanta also believes in the transmigration of souls and the desirability of release from the cycle of rebirth.

Vedas, ancient sacred books of the Hindus. There are four Vedas: the RIG VEDA, containing priestly tradition originally brought to India by the ARYANS; the YAJUR VEDA; the SAMA VEDA; and the Atharva Veda. Vedic literature consists of the *Samhitas*, basic hymns contained in the four Vedas, and the elaborations that came to accompany them; the BRAHMANAS, prose explanations of rituals, which are complemented by the *Aranyakas*; and, the final stage of commentary, the UPANISHADS. The Vedas were composed over a long period, probably c.1500–1200 BC.

V-E Day (8 May 1945), the day WWII ended in Europe. The Germans surrendered unconditionally to Britain, France, the USA and the USSR.

Vedda, or Veddah, aboriginal people of Sri Lanka, now almost absorbed into the modern Sinhalese population. Physically related to the DRAVIDIANS, they were hunters and gatherers, living in caves and practising an ancestral and SHAMANISTIC religion.

Vega, Garcilaso de la. See GARCILASCO DE LA VEGA.

Vega, or Alpha Lyrae, white main-

Velázquez, Diego

sequence star in the constellation of Lyra; the fifth-brightest star in the sky. It is one of the three brilliant stars making up the Summer Triangle. Characteristics: apparent mag. 0.03; absolute mag. 0.3; spectral type AO; distance 26 light-years. See also pp.978, 989, 1013, 1013, 1018–1019, 1019, 1021, 1021.

Vega Carpio, Lope Félix de (1562–1635), Spanish poet and Spain's first great dramatist. A voluminous writer, he produced epics, pastorals, odes, sonnets and novels and created Spanish Romantic drama. About 300 of his works survive, with a further 100 doubtful attributions, including the plays *Peribáñez y el Comendador de Ocaña* (c.1610) and *Fuente Ovejuna* (c.1613). Other works include the novels *La Arcadia* (1598) and *La Dorotea* (1632), and the poems *La Hermosura de Angélica* (1602).

Vegetable, as opposed to animal, a form of life which builds up its tissues by means of growth using the energy of sunlight, carbon dioxide from the air, and the green pigment CHLOROPHYLL. This process is known as PHOTOSYNTHESIS. Vegetables, or green plants, need also to be supplied with water and mineral salts, which are usually present in the soil. The term vegetable is also used in a more restricted sense for vegetable foods.

Vegetarianism, way of life advocated and practised by those who abstain from eating meat. A minority of vegetarian purists, known as Vegans, also exclude from their diet all animal products such as butter, eggs, milk or cheese. There are also many degrees of vegetarianism between the two categories. Vegetarianism has a religious basis in many cultures, particularly among various sects of Hinduism and Buddhism and the Seventh Day Adventists. It is also advocated on ethical, medical and economic grounds.

Veidt, Conrad (1893–1943), German film actor, often cast as a villain in the many films he made in Britain and the USA. His most famous German film was *Cabinet of Dr Caligari* (1919). Others included *The Thief of Baghdad* (1940), *Nazi Agent* (1942) and *Casablanca* (1942).

Veii, ancient town of Etruria, Italy, 19km (12 miles) SW of Rome. It grew up in the Villanovan epoch, and is therefore much older than Rome. It was the nearest Etruscan city to Rome, which fought many wars against it and finally conquered it c.396 BC after a ten-year siege.

Veil nebula, the remnants of a star which exploded about 60,000 years ago in the constellation Cygnus, the Swan. The gases from this explosion, still moving outwards at a high speed, have a gauzy, veil-like appearance. See also pp.985, 985.

Veins, in mammals, vessels that, with the exception of the two pulmonary veins, carry deoxygenated blood to the right upper chamber of the heart. The pulmonary veins carry oxygenated blood from the lungs to the left upper chamber. See also ARTERY; pp.152–153.

Velasco Alvarado, Juan (1910–), President of Peru from 1968 to 1975. A career military officer, he led the 1968 coup against President Fernando Belaúnde over the president's failure to expropriate US-owned oilfields. An advocate of social democracy, Velasco was deposed by his military commanders and replaced by Gen. Francisco MORALES BERMUDEZ.

Velasco Ibarra, José María (1893–), Ecuadorean politician, elected President of Ecuador five times between 1934 and 1972. Deposed or forced to resign before completing any of his terms of office, he became unpopular because of the country's increasing economic and political problems.

Velázquez, Diego (1465–1524), Spanish CONQUISTADOR and first Governor of Cuba (1514–21; 1523–24). He sailed with COLUMBUS to Hispaniola in 1493 and commanded the expedition that conquered and colonized Cuba (1511–14). He commissioned three expeditions to the Mexican coast, placing Hernán CORTÉS in charge of the third venture (1519). Velázquez sent Pánfilo NARVÁEZ (1520) and later Cristóbal de Olid (1524) to com-

Velázquez, Diego Rodriguez de Silva y

pel Cortés to return to Cuba but both were defeated.

Velázquez, Diego Rodriguez de Silva y (1599–1660), Spanish painter, among the greatest masters of realism, hailed in the 19th century as the greatest painter. His early genre works (1617–22) include *The Old Woman Cooking Eggs* (1618) and *The Water Carrier of Seville* (c.1619). In 1623 he became court painter to Philip IV, and throughout his career painted many royal portraits. He also executed, with sensitivity and compassion, splendid portraits of dwarfs and jesters. His *Don Juan of Austria* is a typical example. His portrait of Pope Innocent X (c.1650) ranks with the greatest of all portrait paintings. Velázquez's later works began to merge reality and illusion and include *The Hilanderas* (c.1655) and *Las Meninas* (1656).

Velocipede, early form of BICYCLE or tri-cycle, also called hobby-horse or dandy-horse. The *Célérifère*, built in 1791 by the Comte de Sivrac, consisted of a wooden frame supported by two in-line wheels. A rider straddled the bench-like frame and by pushing his feet on the ground "walked" the machine along. See also pp.488–489.

Velocity, rate of change of distance, ie length per unit time in a specified direction. Thus it is a VECTOR, whereas speed, which merely measures length per unit time with specifying direction, is a SCALAR. See also p.826.

Velvet, soft thick fabric made in a pile weave using silk, cotton or synthetic fibres. It is characterized by a downy pile formed by clipped yarns. See also p.593.

Vena cava, main VEINS of vertebrates that supply the HEART with deoxygenated blood, emptying into its right atrium. The superior vena cava is a large vein formed by the union of the right and left brachiocephalic veins in the lower neck. The inferior vena cava is formed by the union of the right and left iliac veins and also receives venous blood from the renal (kidney), lumbar and hepatic (liver) veins. See also pp.152–153.

Vendée, Wars of the, counter-revolutionary risings by the peasantry of the Vendée district of France. They were in great part stimulated by ROBESPIERRE's attack on the Roman Catholic Church. They began in 1793 when Henri de la Rochejaquelein raised a force of 30,000 men to rid the district of revolutionary officials. After initial success, these forces were heavily defeated in 1795 and made a peace which granted them amnesty and freedom of religion. A brief, and again unsuccessful, rising occurred in 1796.

Vendetta, private family blood feud, especially one practised through generations, as in Corsica and parts of Italy.

Vendôme, Louis Joseph, Duc de (1654–1712), French soldier, also known as the Duc de Penthièvre. As the commander in Catalonia he captured Barcelona in 1697. He led the French army against Prince Eugene of Savoy at Luzzara in 1702 and defeated the Austrian army at Brihuega and Villaviciosa in 1710.

Veneer, extremely thin sheet of wood, or a thin sheet of a precious material such as ivory or tortoise-shell. Plain, cheaper woods or substitutes (such as plywood, chipboard or blockboard) may be completely covered in a richly coloured or grained veneer to give it the appearance of a decorative hardwood. Veneers may also be used as decorative shapes inlaid or set into the cut patterns in a surface such as wood.

Venera space missions, series of space probes sent to Venus by the USSR after 1965. Venera 3, launched in 1965, was the first spacecraft, a year later, to make impact on another planet. Venera 9 and 10 made soft landings on Venus in 1975 and transmitted pictures and atmospheric data for an hour. See also pp.941, 941, 1027, 1027, 1046–1047, 1046.

Veneral disease, any of the diseases transmitted through sexual contact, chief of which are SYPHILIS, GONORRHOEA and chancroid. Syphilis is the most dangerous and may be passed from an infected

mother to her unborn child. Caused by the bacterium *Treponema pallidum*, it follows three stages: firstly a chancre (hard sore) forms on the genital region. Then, about 12 weeks after exposure, a general rash is seen with sores in the mouth and the involvement of the central nervous system and eyes. Syphilis is very infectious at this stage. Thirdly the general symptoms may disappear, but after some years such effects as syphilitic heart disease, blindness, locomotor ataxia and madness may occur. PENICILLIN and its derivatives can still cure syphilis in its early stages.

Gonorrhoea is caused by the gonococcus bacterium and if diagnosed early may be treated with SULPHA DRUGS. Typical symptoms are pain when urinating for a man, and the discharge of pus from the vagina and a burning pain during urination for a woman. Untreated the gonococci reach deeper into the urinary and reproductive systems, possibly attacking the heart valves. All forms of venereal disease respond to the appropriate treatment, but the duration and effectiveness of the treatment depends on an early diagnosis. See also pp.1078–1079.

Venetia (Veneto), region in NE Italy, bounded by the Adriatic Sea (E) and Austria (N); Venice is the capital. The N of the region is mountainous and in the S is the fertile Venetian Plain. The chief river is the Po. Most of the population are farmers; the most important crops are cereals, fruits, sugar-beet and hemp. Industries include chemicals, textiles, paper, tourism, fishing, wine and food processing. The region was settled c.900 BC and came under Roman rule in the 2nd century BC. From the 10th century AD cities in the region were powerful under the rule of noble families, and by the 15th century the republic of Venice was dominant. Venetia was later held by Austria, and it finally passed to Italy in 1866. Area: 18,368sq km (7,092sq miles). Pop. (1971 est.) 4,122,000.

Venetian glass, the cristallo soda-glass wares made in Venice, particularly in the 15th and 16th centuries, characterized by its decorativeness, in both colour and structural embellishment. Subsequent technical advances in England and elsewhere developed a glass that was less brittle, but from the 13th to 16th centuries Venetian glass was pre-eminent. In 1291 the island of Murano became the centre of manufacture and there the secret techniques of gilding, enamelling, colouring, millefiori, latticework and engraving were refined and guarded.

Venetian school, school of Italian painting which flourished in the 15th, 16th and 18th centuries. Its centre was Venice. It developed under the influence of ANTONELLO DA MESSINA and was notable for the sumptuousness and radiance of its colour, a legacy from Byzantine art. Its early masters included the BELLINI and VIVARINI families, followed by TITIAN and GIORGIONE, then TINTORETTO and VERONESE. In the 18th century TIEPOLO, CANALETTO and GUARDI revived Venetian painting.

Veneto. See VENETIA.

Venezia. See VENICE.

Veneziano Domenico. See DOMENICO VENEZIANO.

Venezuela, republic in N South America, including 72 islands in the Caribbean Sea. It is the world's fifth-largest producer of oil and one of the wealthiest countries in Latin America – 80% of the country's income comes from oil. Other exports include iron ore, coffee, cocoa, rice, cotton, steel products, sugar and fruit. The capital is Caracas. Area: 912,050sq km (352,143sq miles). Pop. (1979 est.) 14,539,000. See p.2168.

Venice (Venezia), city in N Italy, 260km (162 miles) E of Milan. It is built on 118 islands, separated by narrow canals, in the Lagoon of Venice, and joined by causeway to the mainland. Settled in the 5th century, it became a vassal of the Byzantine Empire until the 10th century. After defeating Genoa in 1381 Venice became the most important European sea-power, engaging in varied trade in the Mediterranean and Asia. The importance of

Venice declined in the 16th century and it was ceded to Austria in 1797. It became part of Italy in 1866. Venice is the site of many churches, palaces and historic buildings. Industries include glass, textiles, tourism and shipbuilding. Pop. (1979 est.) 355,865. See also pp.1293, 1324–1325, 1340, 1435.

Vening Meinesz, Felix Andries (1887–1966), Dutch geophysicist and geodesist who in 1923 developed a method of measuring gravity in ocean basins. He is also noted for research on the effect of solar movements on the Earth's surface and his studies of convection currents within the Earth.

Venison, meat of the deer, commonly the red or fallow deer. It is lean although it tends to be tough and stringy. See also p.737.

Venizelos, Eleutherios (1864–1936), Greek statesman. In 1910 he became Prime Minister and expanded Greek territories during the Balkan Wars and WWI. He negotiated for Greek interests at the Versailles peace conference but was voted out of office in 1920. He became Prime Minister again in 1928 and 1935 but fought against the monarchy and was forced to flee in 1935. He died in France.

Venn diagram, diagrammatical representation of the relations between mathematical sets or logical statements named after the British logician John Venn (1834–1923). The sets or statements are drawn as geometrical figures, usually circles, which overlap whenever different sets have a common property. See also EULER DIAGRAM; pp.790–791.

Venom, snake, toxic substance produced in the poison glands of snakes and injected into their victims through ducts in or along their fangs. Many venoms are dangerous and some can be lethal unless counteracted by antisera. The effects of snake venom vary according to the species and the constituents of the poison. Blood coagulation, respiratory effects, neurotoxic effects, haemorrhage and anticoagulant effects are among the most common. See also p.67.

Venous thrombosis, the formation of a blood clot in a vein, particularly the deep veins of the leg after a surgical operation. The danger of deep vein thrombosis is that part of the clot may break from the original thrombus and lodge elsewhere, such as in the lung or the heart. See also pp.1067, 1067.

Ventifact, in geology, any stone which has been shaped and sculptured by wind-blown sand. See also p.229.

Ventris, Michael (1922–56), British architect and archaeologist. In 1952 he deciphered MYCENAEAN scripts, particularly Linear B, which was found at Knossos and other sites. His theory (now widely accepted) that Linear B was an archaic form of the Greek language was published, in collaboration with John Chadwick, in *Evidence for Greek Dialect in the Mycenaean Archives* (1953).

Venus, Roman goddess of unknown origin originally associated with gardens and cultivation but also with the ideas of charm, grace and beauty. She became identified with the Greek goddess APHRODITE, and hence also personified love and fertility. See also p.1904.

Venus, second planet from the Sun and almost as large as the Earth. It has no satellites. Its dense atmosphere is largely composed of carbon dioxide. Mean distance from the Sun, 108,200,000km (67,200,000 miles); mass and volume, 0.82 and 0.88 times that of Earth respectively; diameter, 12,100km (7,500 miles); rotation period, 243 days; sidereal period, 224.71 days; surface temperature, approx 485°C (900°F). See also pp.926–927, 926–927, 940, 943, 1027, 1027, 1046, 1047.

Venus de Milo, Greek statue in marble, generally dated 2nd century BC. Found on the island of Melos in 1820, it was taken by the French ambassador to Turkey and later presented to the LOUVRE by LOUIS XVIII. It is one of the most famous statues in the world and has been generally accepted as the embodiment of the ideal of feminine beauty. See also p.1514.

Venus figures, palaeolithic figurines carved from wood, ivory or stone, usually highly stylized representations of a woman. These early sculptures have been found throughout Europe. See also pp.1156–1157, 1904.

Venus of Willendorf. See VENUS FIGURES.

Venus's flower basket, SPONGE found in deep marine waters. Its long cylindrical skeleton is formed from separate silica spicules with a latticed framework of silica. Length: 25cm (10in). Phylum Porifera; species *Euplectella aspergillum*. See also p.53.

Venus's fly trap, INSECTIVOROUS PLANT, *Dionaea muscipula*, native to the marshlands of North and South Carolina, USA. Its leaves resemble jaws, hinged on the mid-line, with a row of tooth-like hairs and sensitive spines along the edges. When an insect touches one of these spines the halves shut, imprisoning the insect, which is then dissolved by ENZYMES and absorbed by the plant. Family Droseraceae. See also pp.357, 371.

Veracruz, port in Veracruz State, Mexico, on the Gulf of Mexico. It was the first Spanish colonial port in Mexico, established in 1519; US forces captured it in 1847 during the Mexican War. Today one of Mexico's two chief ports, Veracruz is an important commercial centre for an oil-processing region. Industries: tourism, textiles, footwear, confectionery, brewing. Pop. (1977 est.) 288,813.

Verb, in the grammar of most languages, the part of speech (either a word or a phrase) which expresses action, occurrence or existence. The tense of the verb indicates the time of the action, ie past, present or future. A verb is regarded as regular or irregular, according to its series of forms, or "conjugation". A transitive verb requires an object, an intransitive verb does not.

Verbena, genus of annual and perennial trees, shrubs and herbs native to the Western Hemisphere. Some species are popular garden plants and have pink, white or purplish flowers. Family Verbenaceae; there are about 2,600 species.

Vercors, one of the most westerly ranges of the ALPS, which extends between the rivers Isère and Drôme in the French départements of the same name. The MAQUIS were active there during WWII and today the spectacular scenery attracts many tourists. The highest peak is Grand Veymont, 2,346m (7,697ft).

Verdi, Giuseppe (1813–1901), Italian composer, principally of opera. The early operas display an original and lively talent and a promising sense of the dramatic. Up to 1853 his masterpieces were *Rigoletto* (1851), *Il Trovatore* (1853) and *La Traviata* (1853). In *The Sicilian Vespers* (1855) the influence of MEYERBEER is apparent – an influence that led also to *Un ballo in maschera* (1859). *Aida* (1867), shows a development in style, with richer and more imaginative orchestration. With Verdi's last three operas, *Don Carlos* (1884), *Otello* (1887) and *Falstaff* (1893), Italian opera of the 19th century reached its greatest heights. Among other compositions are songs and several sacred choral works, such as the *Requiem* (1874) and *Stabat Mater* (1898).

Verdigris, green copper carbonate which forms on objects made of copper or bronze which have been exposed to atmospheric corrosion. The word also refers to the blue-green powder (copper acetate) formed from metallic copper and acetic acid. See also PATINA.

Verdun, Battle of (Feb.–Sept. 1916), the longest and one of the bloodiest engagements of WWI. On 21 Feb. 1916 the Germans launched a massive offensive against the fortress of Verdun in NE France. A British offensive on the Somme relieved German pressure and by December the French had recovered most of the ground lost. Over 2,000,000 men were engaged at Verdun; and there were more than 600,000 casualties. See also p.1668.

Verdun, Treaty of (843), partition of CHARLEMAGNE's empire among his three grandsons, the sons of Emperor LOUIS I. Charles II the Bald received the western part of France, Louis the German terri-

tory extending from the Rhine, Germany to the eastern part of the empire and Lothar I the central part of the empire which included the Low Countries, part of Germany and France and much of Italy. Lothar also kept the imperial title. The Treaty of Verdun was significant as marking the end of political unity in Western Europe. See also pp.1287, 1287.

Vereeniging, city in the Transvaal, NE South Africa, on the Vaal River 56km (35 miles) S of Johannesburg. Founded in 1892, the city developed as a coal-mining centre. The Treaty of Vereeniging, ending the South African War, was negotiated there in 1902. Industries include iron and steel and bricks. Pop. 169,553.

Verelst, Simon (1644–c.1720), Dutch still-life painter. He worked in England at the court of CHARLES II, where the Duke of BUCKINGHAM persuaded him to take up the art of court portraiture.

Verezhagin, Vasilii (1842–1904), Russian artist and sailor. Generally his subjects were battles, for which he drew inspiration from campaigns which he himself witnessed, including the Russo-Turkish War of 1877.

Verga, Giovanni (1840–1922), Italian novelist and short-story writer. His works about Sicilian fishermen and peasants include the collection of short stories *Vita del Campi* (1880) and the novel *Maestro Don Gesualdo* (1889). See also p.1575.

Vergennes, Charles Gravier, Comte de (1717–87), French Foreign Minister (1774–87). Encouraged by Louis XVI, he actively supported French intervention in the War of AMERICAN INDEPENDENCE. Vergennes advocated secret aid to the American colonies as early as 1775 and made an official alliance with them in 1778. In 1779 he brought Spain into the war against Britain.

Vergil, Polydore (c.1470–1555), Italian historian and humanist scholar. He settled in England in the early 16th century. His chief work was *Anglicae Historiae Libri XXVI* (Twenty-six Books of English History) (1546) which influenced HALL and HOLINSHED and, in 1582, became standard reading in English schools.

Verhaeren, Émile (1855–1916), Belgian poet and critic. He studied law, turned to literature and founded the literary review *La Semaine*. His works include the symbolic *Les Soirs* (1888), *Les Forces tumultueuses* (1902) and the war poems *Les Ailes Rouges de la Guerre* (1916).

Verissimo, Erico Lopes (1905–), Brazilian novelist and critic. In his novels he explores the effects of the changing social structure in Brazil. Among his most acclaimed novels are *Crossroads* (1935), *The Rest is Silence* (1943) and *Time and the Wind* (1950).

Verity, Hedley (1905–43), British cricketer who played for England and Yorkshire. A left-arm spin bowler, he played in 40 Test matches between 1931 and 1939 (144 wickets, average 24.37).

Verlaine, Paul (1844–96), French poet. His early poetry, *Poèmes saturniens* (1866) and *Fêtes galantes* (1869), shows the influence of BAUDELAIRE. An intense relationship with RIMBAUD broke up his marriage and he was imprisoned for shooting Rimbaud in 1873. While in jail (1874–75), he wrote *Romance sans paroles* (1874), an early work of Symbolism. He returned to Catholicism and his later poetry, such as *Sagesse* (1880) and *Jadis et Naguère* (1884), deals with the conflict between the spiritual and the carnal.

Vermeer, Jan (1632–75), Dutch painter of genre subjects, portraits and townscapes. His earliest works (1655–60) are in a style close to early Italian BAROQUE and include *The Procuress*, *A Girl Asleep*, *Christ at the House of Mary and Martha* and *Little Street in Delft*. His next group of paintings mark his classic phase, in which he often depicts a single figure, treated in precise detail and bathed in natural lighting. Examples from this period include *Woman with a Red Hat* and *Head of a Young Girl*. See also pp.1444–1445.

Vermeyen, Jan Cornelisz (c.1500–59), Dutch painter, tapestry designer and engraver. He may have studied under

MABUSE, but his style is closer to that of his friend Jan van SCOREL. He became court painter to Margaret of Austria, Regent of the Netherlands, in 1525.

Vermiculite, clay mineral. Its flakes are light and are used in plaster and insulation, and as a packing material. The mineral is also used widely for conditioning soil and as a starting medium for seeds.

Vermont, state in NE USA, in New England, on the Canadian border. The N–S ranges of the Green Mountains dominate the terrain. Most of the W border of the state is formed by Lake Champlain. The region is heavily forested and arable land is limited. Dairy farming is by far the most important farming activity and the state is a major producer of maple sugar and syrup. Mineral resources include granite, slate, marble and asbestos. Manufacturing industries include pulp and paper, food processing, computer components and machine tools. Tourism is important to the state's economy. The principal cities are Montpelier, the state capital, and Burlington.

In 1609 Samuel de CHAMPLAIN discovered the lake that bears his name but the region was not settled permanently until 1724. Land grant disputes with the colonies of New Hampshire and New York persisted for many years. In 1777 Vermont declared its independence as the republic of New Connecticut and kept this unrecognized status until it was admitted to the Union in 1791. Area: 24,887sq km (9,609sq miles). Pop. (1980) 511,456. See also p.2161.

Vermouth, white wine-based drink which has been sweetened, infused with aromatic herbs and fortified by adding brandy. Vermouth is traditionally from France or Italy. It is used as an aperitif, and as an ingredient of many cocktails.

Verne, Jules (1828–1905), French writer of adventure stories. His works are characterized by fantastic settings; he is often considered a founder of science-fiction. His novels include *Journey to the Centre of the Earth* (1864), *From the Earth to the Moon* (1865), *Twenty Thousand Leagues Under the Sea* (1870) and *Around the World in Eighty Days* (1873). See also p.1027.

Vernet, name of a notable family of French painters. Among the most important were Claude Joseph (1714–1789), a landscape and marine painter (see also HC2 p.118); Antoine Charles Horace (1758–1835), his son, who painted vast battle pieces of MARENGO and AUSTERLITZ; and Emile Jean Horace (1789–1863), one of the great French military painters, who decorated the Gallery of Battles at VERSAILLES.

Verneuil process, method for making gemstones artificially, particularly rubies and sapphires. Both of these gems are essentially forms of aluminium oxide (Al₂O₃) coloured with small amounts of other metal oxides. These are fused together in an oxyhydrogen flame, to form molten droplets of the coloured substance, which builds up gradually into a crystalline boule that is cut to make the gemstone.

Vernier, Pierre (c.1580–1637), French mathematician who invented the VERNIER SCALE. He spent the greater part of his life in the service of the King of Spain.

Vernier scale, on instruments for measuring length, small scale that moves alongside the main scale. Its function is to allow more precise measurement by interpolation, and for this purpose it is subdivided more finely than the main scale. Thus, if the main scale extends from 0 to 10 units, the vernier scale may extend from 0 to 1 unit to allow interpolation to one or two places of decimals. On MICROMETERS the vernier scale is on the stem, at right-angles to the spiral main scale.

Vernon, Edward (1684–1757), British admiral. He entered the navy in 1707 and rose steadily in rank. He advocated war with Spain (the War of JENKIN'S EAR) and won great popularity in 1739 by his capture of Portobello. Vernons' nickname, "Grog", was given to the drink – rum diluted with water – that he ordered to be served to his sailors to reduce the amount of alcohol they drank.

Verona, city in NE Italy, 147km (92 miles) E of Milan, on the River Adige; capital of Verona province. The city was captured by Rome in 89 BC. It was a free commune by the 12th century, and prospered under the Della Scala family in the 13th and 14th centuries; it was held by Austria from 1797 to 1866, when it joined Italy. Verona is the site of a Roman amphitheatre dating from the 1st century AD, the church of St Zeno Maggiore (5th–15th centuries), and Gothic tombs of the Scaligeri family. Industries: textiles, chemicals, paper, printing, wine. Pop. 269,763.

Verona, Congress of (1822), conference held in Italy and the last meeting of those powers involved in the Quadruple Alliance of 1814. The Congress decided to use a French army to end a rebellion in Spain against FERDINAND VII, and this decision provoked a rift between the British representative and the other powers. See also p.1662.

Veronese, Paolo Caliari (c.1528–1588), Venetian painter and decorator, who painted large festive works of pageantry using Biblical, allegorical or historical themes. From 1562 he executed a number of large banquet scenes, including *Marriage at Cana*. His last great commission (from 1577) was the decoration of the duke's Palace in Venice. See also p.1390.

Veronica, Saint, traditionally the woman who lent Jesus her head-cloth to wipe his face as he carried the cross. When he returned it, the cloth was supposed to have an imprint of his face and was later thought to perform miracles.

Veronica, or speedwell, widely distributed genus of annual and perennial plants of the figwort family. The small flowers are white, blue or pink. Height: 7.5–153cm (3in–5ft). Family Scrophulariaceae; the genus includes about 250 species.

Verrazano, Giovanni da (c.1485–c.1528), Italian explorer. He explored the Atlantic coast of N America in 1524 in the service of France and discovered New York and Narragansett bays.

Verrio, Antonio (c.1639–1707), Italian decorative painter who went to England in 1671. He worked at Windsor and Whitehall, and succeeded Sir Peter LELY as First Painter to the King in 1684. See also pp.1431, 1431.

Verrocchio, Andrea del (c.1435–88), Florentine sculptor, painter and goldsmith, whose real name was Andrea di Michele di Francesco Cioni. He is believed to have been a pupil of DONATELLO and put great emphasis on surface finish and elaborate detail. In 1472 he designed the coffins of Piero and Giovanni de' Medici in San Lorenzo, which show skilled metalworking. Among other works are a bronze *David* (pre-1476) and *A Boy with a Dolphin* (c.1480), both in Florence and the equestrian statue of Bartolomeo Colonna (c.1480), in Venice. See also pp.1380, 1387, 1387.

Verruca, medical term for a wart, commonly on the sole of the foot, which is painful because it is forced to grow inwards. It also refers to tuberculous warts on the hands. Caused by a virus infection of the skin, local epidemics of verrucas can occur, particularly where many people walk barefoot together. Verrucas may be cut out or treated by cauterization or by gradual scraping after they have been softened by formalin.

Versailles, city in N France, 16km (10 miles) WSW of Paris; capital of Yvelines département. Originally just a village, it grew in size and fame in the late 17th century when Louis XIV built the celebrated palace. The palace contains the royal apartments, the famous Hall of Mirrors and a museum; magnificent gardens, a lake, and several outlying buildings, including the Grand and Petit Trianon palaces, complete the estate. The palace was the German headquarters during the Franco-Prussian war (1870–71) and the scene of the signing of the Treaty of Versailles (1919). Pop. (1968) 90,829. See also pp.1443, 1448.

Versailles, Treaty of (1783). See PEACE OF PARIS.

Versailles, Treaty of (1919), chief among

the five peace treaties that formally terminated WWI. The leading figures at the conference were Woodrow WILSON for the USA, David LLOYD GEORGE for Britain, Georges CLEMENCEAU for France and Emanuele ORLANDO for Italy. The treaty represented a compromise between Wilson's FOURTEEN POINTS and the demands of Britain, France, Italy and the other Allies for reparations from Germany. It demilitarized Germany and created a triple defence alliance against her. Former German colonies were made mandates of the LEAGUE OF NATIONS, which was created by the treaty; Poland received a corridor to the Baltic; and Yugoslavia was awarded the port of Rijeka (Fiume). The treaty was never ratified by the USA because the high reparations contradicted Wilson's programme. See also pp.1672–1673.

Vers Libre, or "free verse", term used to describe poetry in which the restrictions of metre and rhyme are relaxed. The term originated in 19th-century France when RIMBAUD and Laforgue attempted to free French verse from the stranglehold of the alexandrine measure. Modern development owes much to Walt WHITMAN, Ezra POUND and T. S. ELIOT.

Vertebra, one of the bones making up the spine (backbone), or vertebral column. Each vertebra is composed of a large solid body from the top of which wing-like processes project to either side; a central opening (vertebral foramen) through which the spinal cord passes below which is often another opening enclosing blood vessels (haemal arch). Further projections extend from the vertebral foramen and haemal arch. See also p.147.

Vertebral column. See SPINE.

Vertebrate, animal with individual discs of bone or cartilage called VERTEBRAE surrounding or replacing the embryonic NOTOCHORD to form a jointed backbone. The head-end of the nerve cord is enlarged into a brain, and the attendant sense organs of smell, taste, sight, hearing and balance are correspondingly complex. The principal division is between the aquatic, fish-like forms (several extinct and living classes) and the partly (AMPHIBIANS) and wholly (REPTILES, BIRDS, MAMMALS) land-adapted forms. Four-legged vertebrates are called tetrapods, and those with fluid-filled embryonic membranes that permit development on land are known as amniotes. Birds and mammals are the only warm-blooded vertebrates with circulatory, respiratory and excretory systems which allow for constant high body temperatures. Phylum Chordata; subphylum Vertebrata. See also CHORDATE; FISH; REPTILE; pp.4, 5, 54–55.

Vertex (pl. vertices), point at which two sides of a triangle or other polygon intersect or at which three or more sides of a pyramid or other polyhedron intersect. It is also the point of a cone.

Vertigo, disruption of the body's sense of balance or equilibrium. It may be produced by rapid body rotation, some diseases, a brain disorder or reduced flow of blood to the brain due to altitude. It may be accompanied by nausea.

Vertov, Dziga (1896–1954), Soviet film director who specialized in documentaries. A newsreel cameraman, he founded the Kinoki (film-eye) group in 1918 to enhance realism by using the camera as a human eye. He also experimented with crosscutting, camera angles, slow motion and enlarged close ups. His films include *A Sixth of the World* (1927), *Symphony of the Don Basin* (1931) and *Lullaby* (1937). See also p.1760.

Vertue, George (1684–1756), British antiquary, collector and engraver. He compiled voluminous notes for a history of the arts which were bought by Horace WALPOLE, and used as the basis for his *Anecdotes of Painting in England* (1761–71).

Vertumnus, Roman god associated with the ripening of fruit and hence the seasons of the year. At his festival on 13 August, timed to coincide with the ripening of fruit, people made offerings of the first fruits of the harvest.

Amerigo Vespucci gave his Christian name to America, the coast of which he explored.

Vesuvius; the greatest destruction in recent times was during the 1906 eruption.

Viaducts were first built by the Romans and many fine examples survive.

Vichy; Pétain's government had its headquarters here at the Pavillon de Sévigné.

Verulamium, Romano-British town built to the W of the modern city of St Albans, Hertfordshire. It is thought to have been awarded the status of *municipium* (its inhabitants having the same rights as Roman citizens) in the 1st century AD, soon after the Roman conquest. It was then destroyed by BOADICEA but soon rebuilt. Excavations have revealed a theatre dating from the 2nd century AD, a market hall and a number of mosaics and wall paintings. See also pp.1234-1235, 1238-1239.

Vervet monkey. See GUENON.

Verviers, city in E Belgium on the River Vesdre. An important weaving centre since the 15th century, it remains the focus of Belgium's woollen trade. Pop. (1971 est.) 33,600.

Vervoerd, Henrik Frensch (1901-66), South African Prime Minister. He held a number of important posts in the Nationalist Party and became Prime Minister in 1958. An ardent segregationist, he led South Africa out of the British Commonwealth in 1961. He was assassinated in 1966. See also p.1736.

Vesalius, Andreas (1514-64), Flemish anatomist. His *De Corporis Humani Fabrica*, stating the results of his study and dissection of the human body, marked the beginning of modern anatomy. See also pp.1436, 1437.

Vespasian (AD 9-79), Roman emperor (r.69-79), founder of the Flavian dynasty. He commanded the army in Germany (42) and England (43), served as governor of Judaea under NERO and conducted the war against the Jews from 40 to 68. His soldiers proclaimed him emperor when Nero died. He instituted a period of peace, improved Rome's financial state and started the building and inspired the Romanization of England. See also pp.1232, 1241.

Vespers, evening office of the Western Church. It consists of psalms, a reading from the Bible, the Magnificat, a hymn and a collect. Celebrated in the late afternoon, it is the basis of the Anglican evensong service.

Vespucci, Amerigo (1454-1512), Italian navigator and explorer. He was the first to consider America to be a separate continent, which was named after him by Martin Waldseemüller. Vespucci made several expeditions along the coast of Central and South America (1497-1503) in the service of Spain. He developed a method for computing nearly exact longitude. See also pp.1368, 1368.

Vesta, in Roman religion, the goddess of fire and purity, supreme in the conduct of religious ceremonies. Her priestesses were the VESTAL VIRGINS. Vesta was the guardian of the hearth and patron goddess of bakers. Her festival, the Vestalia, was held on 7-15 June. See also p.1227.

Vesta, brightest ASTEROID in the SOLAR SYSTEM, and the only one visible to the naked eye. Its mean distance from the Sun is 352,800,000km (219,130,000 miles) and it has a diameter of approx. 590km (360 miles). See also pp.1227, 1227.

Vestal virgins, in ancient Rome, the priestesses of the cult of VESTA, who tended the sacred fire in the Temple of Vesta and officiated at ceremonies in the goddess' honour. The Vestals remained in the service of the temple for up to 30 years under vows of absolute chastity, violation of which was punishable by burial alive. They enjoyed great prestige in the social order of Rome. See also HESTIA; pp.1227, 1227.

Vestigial structure, in biology, an organ or limb that is deformed or degenerate in appearance, and no longer has any recognizable function. Human vestigial structures include the tonsils and the appendix.

Vestris family, family of Italian-French dancers. Gaetan Vestris (1729-1808) studied in Paris and became ballet master to Louis XVI. He introduced the use of facial expressions in mime. His son Auguste (1760-1842) was the leading dancer with the Paris Opéra for many years. See also p.1483.

Vesuvianite. See IDOCRASE.

Vesuvius, Mount (Vesuvio), active volcano in S Italy, on the Bay of Naples.

There are several villages and numerous vineyards on the fertile lower slopes. The earliest recorded eruption was in AD 79 when Pompeii and Herculaneum were destroyed. It is the site of several seismological stations. The height of the volcano changes with each eruption; in 1970 it was 1,280m (4,198ft). See also pp.1228, 1229.

Veterinary medicine, medical science that deals with diseases of animals. It was practised by the Babylonians and Egyptians some 4,000 years ago. Late in the 18th century, schools of veterinary medicine were established in Europe. Today's veterinary surgeons spend most of their time treating household pets and farm animals. Many animal diseases, such as rabies, tuberculosis, psittacosis (parrot fever), tularemia (rabbit fever) and brucellosis, can be transmitted to human beings, and in these areas a veterinarian's work becomes especially important.

Veto, power to reject. The royal veto in Britain, one of the Crown's PREROGATIVE powers, has not been used to reject parliamentary bills since Queen ANNE vetoed the Scottish militia bill in 1708.

Vevers, Henry Gwynne (1916-), British zoologist. He was appointed Curator of Aquaria and Assistant Director of Science, Zoological Society of London in 1955. His publications include *Nature of Animal Colours* (1960, with H. M. Fox) and *London's Zoo* (1976).

VHF (very high frequency), range or band of radio waves of frequencies 30 to 300MHz and of wavelength of 1-10m. This band is employed in radio broadcasting to provide high-quality reception. See also pp.638-639.

Viaduct, bridge (usually resting on several narrow, concrete or masonry arches) with high supporting piers, which carries roads or railways. Steel bridges comprising short spans carried on high towers are also referred to as viaducts. See also AQUE-DUCT; p.533.

Vian, Sir Philip Louis (1894-1968), British admiral. In WWII he commanded the 4th destroyer flotilla in the action against the German pocket battleship *Bismarck*. He also took part in the invasion of Sicily, the Salerno landing and in the Normandy landing in 1944.

Viani, Alberto (1906-), Italian sculptor. He studied at the Academy of Fine Arts, Venice (1944-47), under Arturo Martini and became his assistant. In 1946 he joined the Fronte Nuovo dell' arte group. Influenced by ARP and Brancusi, he later developed his personal, more monumental, abstract form. His works include *Caryatid* (1952) and *Abstract Nude* (1949-53).

Vibraphone, musical instrument with metal bars of different lengths which are struck with sticks or mallets to produce various notes. The notes are amplified by resonance: tubes beneath the bars vibrate at the same frequency as the bar above and magnify the sound. See also p.835.

Viburnum, genus of flowering shrubs and small trees native to North America and Eurasia. All have small, fleshy fruits containing single flat seeds. The flowers are small, fragrant and clustered. Well-known species are the wayfaring tree, hobblebush, black haw, arrow-wood, highbush, cranberry and snowball. There are about 120 species. Family Caprifoliaceae.

Vicar, in the Church of England, a priest who is the head of a parish. In the Roman Catholic Church "vicar" is used in several senses. The pope is called Vicar of Christ, meaning representative of Christ. A vicar apostolic is a bishop representing the pope in a country that does not have an established branch of the Catholic Church.

Vicente, Gil (c.1470-c.1536), Portuguese playwright and humanist whose works reveal the influence of Renaissance Italy. His plays vividly portray Portuguese society and include *Auto da Mofina Mendes* (1534), *Comedia de Rubena* (1521) and *Auto da Lusitania* (1532). They were published in 1562 by his son and daughter.

Vicenza, industrial city of NE Italy, 64 km (40 miles) W of Venice. Founded as a Ligurian settlement, it became a member of the Lombard League in the 12th cen-

tury. It was taken by Venice in 1404 and held by Austria from 1797 until 1866, when it was united with Italy. Industries include the manufacture of machinery and chemicals and printing. Pop. (1979) 117,571.

Vice-president, deputy for a president. In the USA he may succeed to the presidency in the event of the death, resignation, physical disability or removal from office by impeachment of the president. The American vice-president belongs to the same political party as the president and is elected with the president to serve a four-year term of office.

Viceroy, governor of a country or province, ruling in place of the Sovereign. The office was used in the old Spanish monarchy and by the British in India from 1858 to 1947.

Viceroy butterfly, large BUTTERFLY that has orange-brown wings with black veins and borders. It is noted for its mimicry of the MONARCH BUTTERFLY. The viceroy can be distinguished from the monarch by its smaller size and a transverse black band on its hind wings. Species *Limenitis archippus*. See also p.47.

Vichy, town in central France on the River Allier, 320km (200 miles) SSE of Paris. The Romans called it Aquae Calidae ("warm springs") after its hot and cold alkaline springs. This water, now bottled commercially and exported to many parts of the world, is reputed to mitigate stomach and liver complaints. After the fall of France (July 1940) Vichy became the seat of government until the German occupation (Nov. 1942).

Vichy Government, regime set up in the town of Vichy to rule those parts of France and the French overseas empire not occupied by the Germans after the France-German armistice of 22 June 1940. Its prime minister was Marshal PÉTAIN, a hero of WWI, but its most important member was the deputy prime minister, Pierre Laval. From November 1942 German troops occupied all of France, and the Vichy regime lost all but the shadow of power. After the Allied invasions of 1944, the highest officials of the right-wing, authoritarian Vichy regime moved east with the Germans, and the Free French movement of De Gaulle became the dominant political organization. See also pp.1710, 1710.

Vickers, Jon (1926-), Canadian tenor. He became a principal tenor at COVENT GARDEN in 1957 and made his METROPOLITAN OPERA COMPANY debut in 1959. He is highly regarded as a Wagnerian tenor.

Vicksburg, Siege of (1863), major offensive by Union forces under Gen. Ulysses S. GRANT during the AMERICAN CIVIL WAR. The capture of Vicksburg meant the division of the Confederacy. Confederate troops and civilians suffered greatly to hold the city but it fell on 4 July 1863, after a campaign lasting more than a year.

Vico, Giambattista (1668-1744), Italian historian. In his *New Science* (1725; revised 1730 and 1744) he argued for a study of history as the development of human societies through various historical periods. He is sometimes considered the father of modern historiography.

Victor, name of three popes and two antipopes. Victor I (r.c.189-199) was an African. He threatened to excommunicate Roman Catholics of Asia Minor because of the unorthodoxy of the date on which they celebrated Easter. Following the intervention of St Irenaeus and others he relented and avoided a schism. Monarchism arose during his pontificate. Victor II (c.1018-57; r.1055-57) executed the duties of his office along the reformed and uncorrupt lines established by his predecessor LEO IX. Victor III (1027-87; r.1086-87) campaigned successfully against the Saracens in N Africa and continued the ban on lay investiture, despite continual opposition from the antipope Clement III. Victor IV (r.1138) was an antipope chosen in opposition to INNOCENT II by Roger II of Sicily and the Pierleoni family, but was persuaded to submit by St BERNARD OF CLAIRVAUX. Victor V (also known as IV) (r.1159-64) was an antipope elected by Frederick I

Vienna Boys' Choir

Barbarossa to oppose ALEXANDER III. Europe was against the imperial control of the papacy and Victor received little support.

Victor Amadeus, name of three dukes of Savoy. Victor Amadeus I (1587-1637) became duke in 1630. Victor Amadeus II (1666-1732) was duke from 1675. He fought in the War of the SPANISH SUCCESSION on the HAPSBURG side after 1703 and was proclaimed King of Sicily in 1713. In 1720 he ceded Sicily to Austria and became King of Sardinia-Piedmont instead, but abdicated in 1730. Victor Amadeus III (1726-96) was Duke of Savoy and King (as Victor Amadeus II) of Sardinia (r.1773-96). He lost Nice and Savoy to France and was forced to abdicate by NAPOLEON in 1796.

Victor Emmanuel, name of three Italian kings. Victor Emmanuel I (1759-1824) became Duke of Savoy and King of Sardinia in 1802. He joined the First Coalition against France (1792-97), and lost all his territories except Sardinia to NAPOLEON (1802-14). After his restoration, his reactionary policies led to his abdication in 1821. Victor Emmanuel II (1820-78) became King of Sardinia-Piedmont in 1849. He appointed Camillo Cavour to be chief minister in 1852, led the fight to expel Austria from Italy, and encouraged Giuseppe GARIBOLDI to conquer Sicily and Naples. He was proclaimed the first King of Italy in 1861. He secured Venetia as part of Italy in 1866, and the PAPAL STATES in 1870. Victor Emmanuel III (1869-1947) was King of Italy (r.1900-46). He originally sought neutrality in WWI, and failed to oppose the rise of MUSSOLINI. In 1943 he had Mussolini arrested, but fled to Italy when the Germans occupied Rome. He abdicated in 1946. See also pp.1588, 1589.

Victoria, in Roman religion, an ancient agricultural divinity who became identified with Roman military success. As the personification of victory, she was associated with MARS and JUPITER.

Victoria (1819-1901), Queen of Great Britain and Ireland (r.1837-1901) and Empress of India (r.1876-1901). She was the daughter of Edward, Duke of Kent (the fourth son of GEORGE III), and of Mary Louisa Victoria of Saxe-Coburg-Gotha, and was the successor to WILLIAM IV. Her reign was the longest in English history. On her accession to the throne she allowed LORD MELBOURNE, the Whig Prime Minister, to become her adviser. She married her first cousin, Prince ALBERT of Saxe-Coburg-Gotha in 1840, and had nine children. He taught her devotion to, and neutrality in, political work. On ALBERT's death in 1861, she retired to private life at BALMORAL for three years, during which time her popularity declined; but with Benjamin DISRAELI as Prime Minister after 1868 she took a new interest in politics. In her later years her dislike of WILLIAM GLADSTONE was to influence affairs, especially his policy of Irish Home Rule. Her reign was important at home in winning respect for the monarchy in an increasingly parliamentary age and abroad for extending British influence. See also pp.1590-1591, 1619.

Victoria, Guadalupe (1789-1843), Mexican soldier and political leader, original name Manuel Félix Fernández. He served as a revolutionary soldier after 1810 and as first President of the Mexican Republic from 1824 to 1829. As president, he organized the economy, established diplomatic relations with other countries and abolished slavery.

Victoria, Tomás Luis de (c.1548-1611), Spanish composer, member of PALESTRINA's school in Rome. His works, which include masses, motets, psalm settings and two passions, although influenced by his school, retain a unique Spanish style and made him one of the greatest composers of the 16th century.

Victoria, state in SE Australia bounded by the Indian Ocean, the Bass Strait and the Tasman Sea; the most densely populated state in Australia. The area is crossed by the Australian Alps and other ranges of the Eastern Highlands. Irrigation is used extensively to grow wheat, oats, barley,

fruit and vegetables; sheep and dairy cattle are also important. The principal industries are motor vehicles, textiles and food processing. Coal, natural gas and oil are the chief mineral resources. The main cities are Melbourne (the capital), Geelong, Ballarat and Bendigo.

Sheep farmers from Tasmania began the first permanent settlement in the 1830s. Known as Port Phillip District, the region was part of the colony of NEW SOUTH WALES until 1851, when it became a separate colony. The population increased rapidly after 1851, when gold was discovered. Victoria became part of the Commonwealth of Australia in 1901. Area: 227,620sq km (87,813sq miles). Pop. 3,443,800. See also p.1974.

Victoria, city in British Columbia, SW Canada, on SE Vancouver Island; capital, largest city and chief port of British Columbia. Founded in 1843, it developed during the gold rush in 1858 as a supply base for gold prospectors. The city has the University of Victoria (1902). Industries: timber, shipbuilding, fish processing, deep sea fishing, tourism. Pop. (1971) 61,761. **Victoria**, capital of the British Crown colony of Hong Kong, situated in the NW of Hong Kong Island. Victoria has one of the finest deep water harbours in the world and is the largest trans-shipment centre in E Asia. The commercial centre of Hong Kong, it has many banking institutions. It is the seat of the University of Hong Kong (1911). Pop. (1971) 520,932.

Victoria, capital of the Seychelles, a group of islands in the Indian Ocean. Situated on NE Mahé island, it has a deep-water harbour and is the only town of significant size in the group. Pop. (1971 est.) 13,622.

Victoria, or **Victoria Nyanza**, lake in E central Africa on the border of Tanzania and Uganda. The second-largest freshwater lake in the world, its coastline of more than 3,200km (2,000 miles) provides harbours for coastal towns. It is the chief reservoir of the River Nile. Area: 69,484sq km (26,828sq miles).

Victoria Cross, highest military decoration awarded to the Commonwealth armed services for acts of exceptional bravery. Instituted in 1856 by Queen Victoria, vcs consist of a bronze cross with a crimson ribbon. They were first struck from the metal of cannon captured at Sebastopol but since 1942 have been made from gunmetal.

Victoria de Durango. See DURANGO.

Victoria Falls, waterfalls on the Zambezi River at the border of Rhodesia (Zimbabwe) and Zambia. Formed by water erosion along a fracture in the Earth's CRUST, they are divided by several islets into a series of falls. They were discovered by the British explorer DAVID LIVINGSTONE in 1855 who named them after Queen Victoria. Maximum drop: 108m (355ft); width: more than 1,700m (5,580ft).

Victorian Order, Royal, British order of chivalry instituted by Queen Victoria in 1896. It consists of a Grand Master, Chancellor, Secretary, Registrar, Chaplain and five classes: Knight Grand Cross, Knight Commander, Commander, and Member of the fourth and fifth classes.

Victory, HMS, British warship launched in 1765 as a 104-gun ship of the line, 57m (186ft) long and displacing 2,162 tonnes. In 1805 Nelson used it as his flagship. *Victory* is now kept as a museum at Portsmouth. See p.567.

Victory (Nike) of Samothrace (Winged Victory), heroic marble statue of the HELLENISTIC period, depicting a winged female figure swathed in gracefully draped robes. Supposedly carved by Pythecritus of Rhodes (early 2nd century BC), it is in the LOUVRE, Paris.

Victrola, trade mark and name for phonographs (gramophones) manufactured by the Victor Talking Machine Company (1906-29). The name became synonymous with the disc gramophone. See also p.642.

Vicuña, graceful, even-toed, hoofed South American mammal, humpless and smallest member of the CAMEL family. It lives near the snowline of the Andes Mountains. It resembles the LLAMA and its silky coat is tawny brown with a yellowish

bib under the neck. It can run at 48km/h (30mph). Height: 86cm (34in) at the shoulder; weight: 45kg (100lb). Family Camelidae; species *Vicugna vicugna*. See also GUANACO; pp.95.

Vidal, Gore (1925-), US writer. His first novel, *Williwaw*, appeared in 1946. Other works include *In a Yellow Wood* (1947), *The City and the Pillar* (1948), *Myra Breckinridge* (1968) and its sequel *Myron* (1974). He wrote a trilogy about American political life which began with *WASHINGTON DC* (1967), continued with *BURR* (1973) and ended with *1876* (1976). Vidal is also the author of critical essays, plays and screenplays, including *Suddenly Last Summer* (1958).

Videla, Lieut-Gen. Jorge Rafael (1925-), President of Argentina from 1976. He had a military career, becoming Chief of the Army General Staff in 1973 and Commander-in-Chief in 1975. In 1976 he deposed President PERÓN.

Video recording, the principle of recording and reproducing sound and moving pictures, ie television programmes. It is essential in modern television because of the saving in cost and processing and editing time, two disadvantages of films. The video recorder developed from the magnetic tape recorder from which it differs significantly in two respects: video tape is wider to accommodate the picture signals; and the relative speed at which the tape passes the magnetic head is faster to deal with the larger amount of information necessary for recording and reproducing pictures. See also pp.644-645.

Videotape, magnetic tape that records television signals. The signals are passed through the recording head (an electromagnet) of a videotape recorder, so that they fix, by induction, a magnetic pattern on the tape. These patterns generate the original signals when the tape passes the replay head (also an electromagnet). See also pp.644-645.

Vienna (Wien), capital of Austria, on the River Danube. Vienna became an important town under the Romans but after their withdrawal in the 5th century it fell to a succession of invaders from E Europe. The first HAPSBURG ruler was instated in 1276 and the city was the seat of the HOLY ROMAN EMPIRE from 1558 to 1806. The city was occupied (1806 and 1809) by the French during the NAPOLEONIC WARS, and was later chosen as the site of the Congress of VIENNA. As the capital of the Austro-Hungarian Empire, it became the cultural and social centre of 19th-century Europe under the Emperor FRANCIS JOSEPH I, but suffered an economic and political collapse following the defeat of the Central Powers in WWI. In 1938 HITLER's armies invaded Vienna after Germany had annexed Austria and after WWII it was occupied (1945-55) by joint Soviet-Western forces. Vienna has many famous historical buildings, including the 12th-century St Stephen's Cathedral, the Schönbrunn (royal summer palace) and the Hofburg (a former residence of the Hapsburgs). Its industries include chemicals, textiles, furniture and clothing. Pop. (1981) 1,580,600. See also pp.1558-1559, 1561.

Vienna, Congress of (1814-15), assembly of European leaders held to reorganize Europe after the defeat of NAPOLEON. The essential provisions of their treaty lasted for almost a century. The victors - Britain, Russia, Prussia and Austria - together with defeated France, balanced power and territory in Europe with the aim of preventing war, but often at the expense of the national hopes of the peoples affected. The main territorial adjustments were: France lost little, except the Rhineland to Prussia, which also gained some of Saxony; the defunct Holy Roman Empire was superseded by the German Confederation; and Austria received territories in N Italy. Poland was divided between Austria, Russia and Prussia. See also pp.1538-1559, 1586.

Vienna Boys' Choir, music group consisting of 22 boys between the ages of eight and fourteen years. The oldest Viennese musical institution, it was founded in 1498 as the choir of the court chapel.

Victoria's reign saw the height of imperial power and great advances in science.

Victoria's capital city is Melbourne, part of which is shown in this view.

HMS Victory was Nelson's flagship at Trafalgar, a decisive battle in naval history.

Vienna's Opera House was designed to resemble an earlier one destroyed in WWII.

Vienna circle

Vienna circle, group of philosophers and mathematicians who met in Vienna from 1922 to 1936 to discuss scientific language and philosophy. The resulting philosophical movement became known as logical positivism. Members of the circle included Moritz Schlick, its leader, and Rudolf Carnap.

Vienna Sezession (1897), radical movement of young Austrian artists who organized their own exhibitions in defiance of the traditional organizations and aligned themselves with their progressive European contemporaries. The first president was Gustav Klimt and other members were Oskar Kokoschka and Egon Schiele. Together with the Sezessionists in Munich and Berlin, these artists were the instigators of the Jugendstil movement.

Vientiane (Viangnan), capital of Laos, in central Laos on the Mekong River. It was the capital of the Lao kingdom from 1707 to 1828, when it was destroyed by the Siamese. The city passed to the French in 1893 and in 1899 became the capital of the French protectorate. Industries: textiles, hides, wood products. Pop. (1979 est.) 90,000.

Vieta, Franciscus (1540–1603), French mathematician. He devised methods for solving algebraic equations to the fourth degree and his *Isagoge in artem analyticam* (1591) is probably the earliest work on symbolic algebra.

Viet Cong nickname for the guerilla army which fought against the South Vietnamese government and its allies during the 1960s and 1970s. It was formed as an armed opposition to the dictatorial regime of President Diem and from 1960 was directed by the National Liberation Front (NLF). In spite of massive US aid to the South Vietnamese government, the Viet Cong (closely linked to the North Vietnamese government of HO CHI MINH) was remarkably successful during the VIETNAM WAR, and proved its military capacity during the Tet offensive of 1968. American forces were then progressively withdrawn, and a peace was signed at Paris in 1973. In 1975, however, this broke down, and together with North Vietnamese regulars the Viet Cong took over South Vietnam. See also pp.1778–1779, 1778–1779.

Viet Minh, Vietnam League for Independence, founded by HO CHI MINH (then an exile in China) in 1941. From 1943 it conducted operations against the Japanese but in 1945, when the French refused to recognize a Viet Minh provisional government, it began a guerrilla war against the French administration. Brilliantly led by General Giap, Viet Minh forces eventually defeated the French at Dien Bien Phu in 1954. See also pp.1778–1779.

Vietnam, independent nation in SE Asia. Under foreign influence for centuries, it was divided into two countries in 1954 and reunited in 1975 after the VIETNAM WAR. The northern region is covered by thick jungle and the climate causes frequent flooding. Fertile soil produced good harvests, however, until the escalation of the war in the 1960s, when both agriculture and industry came to a standstill. The capital is Hanoi. Area: 338,392sq km (130,653sq miles). Pop. (1981) 54,000,000. See p.2169.

Vietnamese, the national language of VIETNAM, spoken by about 38 million inhabitants, most of the country's people. It is part of the Muong branch of the Mon-Khmer subfamily of Asiatic languages and derives much of the vocabulary from Chinese.

Vietnam War, military conflict between South Vietnamese government forces, aided by the USA, and the Communists (Viet Cong), supported by North Vietnam. A civil war aimed at reunification of Vietnam following its partition in 1954 into North (Communist) and South (non-Communist) rapidly developed into a major conflict. In the early 1960s the USA became militarily involved and by 1968 there were more than 500,000 US troops in South Vietnam. North Vietnam received aid from the USSR and China. Despite US intervention, the South Vietnamese were unable to defeat the Viet Cong and North

Vietnamese. By the late 1960s pressure developed within the USA for the withdrawal of US troops. Efforts towards a negotiated peace were begun in 1969 and a peace treaty was signed in January 1973 by South Vietnam, the USA, North Vietnam and the National Liberation Front (the Communist provisional revolutionary government in South Vietnam). It provided for an end to hostilities and for the withdrawal of US forces. Fighting between South Vietnamese and Communists continued, however, and in April 1975 the South Vietnamese government fell to the Communists. See also pp.1733, 1778–1779, 1778–1779.

Vigée-Lebrun, Marie Louise Elisabeth (1755–1842), French painter. Her portrait of MARIE ANTOINETTE (1779) led to a lasting friendship with the queen and to her appointment as Painter to the Queen. She also kept a distinguished salon. Her portraits include *Lady Hamilton as Sybil* and *The Artist and her Daughter*.

Vigilius, Roman Catholic pope (c.537–555). He was elected by the persuasive powers of Emperor JUSTINIAN and, with the Empress Theodora, planned the deposition of Pope SILVERIUS, his predecessor. Involved in the MONOPHY SITE controversy, he became a virtual prisoner in Constantinople for eight years and died on the way back to Rome.

Vigneaud, Vincent Du (1901–78), US biochemist was awarded the 1955 Nobel Prize in chemistry for determining the structure and synthesis of VASOPRESSIN and oxytocin, two polypeptide hormones. In the 1930s he discovered the metabolic processes by which a methyl group (–CH₃) is moved from one compound to another, called transmethylation. He also deduced the two-ring structure of biotin in 1943 and studied INSULIN, PENICILLIN synthesis and AMINO ACID metabolism.

Vignette, small decorative motif found in books of the 18th and 19th centuries. The term now also applies to vignetted photographs and to any drawn image that fades away towards the edges.

Vignola, Giacomo Barozzi da (1507–73), Italian MANNERIST architect, the leading architect in Rome after the death of MICHELANGELO, whom he succeeded (1567–73) as architect of St Peter's. His Gesù, Rome (1568), mother church of the Jesuits, with its revolutionary design uniting clergy and congregation more closely, has been more widely copied than any other church. His other major works include the Palazzo Farnese, Caprarola (1559), a magnificent pentagonal palace; and the Tempietto di San Andrea (1550) and Sant' Anna dei Palafrenieri (1473), both in Rome.

Vignon, Claude (1593–1670), French painter who worked for LOUIS XIII and RICHELIEU. From 1618 to 1624 he worked in Rome where he was influenced by the followers of CARAVAGGIO, especially SIMON VUET. He later developed a style similar to that of REMBRANDT, who was his friend.

Vigny, Alfred de (1797–1863), French romantic poet, dramatist and novelist. A pessimist, he emphasized the lonely struggle of the individual in a hostile universe. He never expressed personal emotion but presented his ideas through general symbols. His best poems are found in *Poèmes antiques et modernes* (1826), and his novels include *Cinq-Mars* (1826).

Vijayanagar, ancient city of SE India. In the 14th–16th centuries its empire controlled most of S India, and the city itself was an important Hindu cultural centre. Vijayanagar was destroyed by Muslim forces in 1565.

Vikings, Scandinavian marauders and invaders also called Norsemen and in E Europe Varangians. They were skilled shipbuilders and sailors, and raided areas of continental Europe and the British Isles from the 9th to the 11th centuries. In some areas they established colonies, exerting considerable influence on the history of Europe by encouraging the growth of the FEUDAL SYSTEM. See also pp.1275, 1288, 1288, 1290–1291, 1290.

Viking space mission, exploration of Mars by two US spacecraft which landed there in the summer of 1976. The mission included

experiments to search for evidence of life. Viking 1 landed on the Chryse basin on 20 July; Viking 2 landed on 3 September on Utopia Planitia. Both spacecraft sent back spectacular colour photographs showing reddish soil strewn with rock. They dug into the soil and collected samples which were analysed in their biology laboratories for signs of life. No organic compounds were detected. Viking detected silicon, iron, calcium, aluminium and titanium as major elements in the Martian soil. See also pp.946–947.

Vila, capital of the New Hebrides, in the SW Pacific Ocean, on SW Efate island. Vila is the major port and commercial centre of the island group. Pop. (1972) 12,536.

Villa, Pancho (1877–1923), Mexican revolutionary leader. He began as an outlaw and later joined the revolutionary forces of Francisco Madero (1909). He sided with Venustiano Carranza for some time, but later supported Emiliano Zapata. Angered by US recognition of Carranza's government, Villa murdered US citizens in N Mexico and New Mexico. President Woodrow WILSON sent troops to capture him but they failed and in 1920 he was granted a pardon in return for agreeing to retire from politics. He was assassinated three years later. See also pp.1740, 1741.

Villa, large country house of the Roman and post-Roman period. The private residences of important citizens, villas had spacious reception rooms, often with mosaic floors and sometimes even underground heating.

Villafranca, Treaty of (1859), armistice concluded between France and Austria after the French victory at Solferino in the war to drive Austria out of northern Italy. Austria was allowed to retain Venetia, but Lombardy was given up to France so that it might then be ceded by France to Piedmont. The treaty was broken in 1860 when Piedmont annexed the central duchies of Tuscany and Modena. See also p.1588.

Village Romeo and Juliet, A, opera in prologue and three acts by Frederick DELIUS; libretto by the composer, based on the story by Gottfried KELLER. It was first produced in Berlin in 1907, and in London in 1910.

Villa-Lobos, Heitor (1887–1959), Brazilian composer and conductor. His work was influenced by South American Indian folk music and the music of DEBUSSY. His range of works includes operas, ballets, symphonies, religious and chamber works. The nine *Bachianas Brasileiras* are a type of Brazilian transcription of the music of BACH; other Brazilian works are fourteen *choros* (serenades) for various instrumental combinations.

Villanueva, Carlos Raúl (1900–), Venezuelan architect. He introduced the European style of modern architecture to his country, particularly in his School of Architecture (1957) and the Auditorium at University City, Caracas (1950–51). His work exploits exposed concrete and is often brightly decorated.

Villard, Paul (1860–1934), French physicist. In 1900, while studying radiation emitted from uranium, he found that some of it was more penetrating than either alpha or beta rays and, unlike these two, was not deflected by a magnetic field. This new form of radiation was similar to X-rays and later came to be called GAMMA RADIATION.

Villard de Honnecourt (fl.13th century), French architect and master mason, known only through his sketchbook, which is now in the Bibliothèque Nationale, Paris. It contains plans of buildings then being constructed, such as REIMS and Leon Cathedrals, projects for his own works, some elementary geometry and notes for younger sculptors.

Villars, Claude-Louis-Hector, duc de (1653–1734), French general. In the War of the SPANISH SUCCESSION (1701–14), he won victories at Friedlingen (1702) and Höchstädt (1703). See also p.1446.

Villeda Morales, Ramón (1908–71), President of Honduras (1957–63). A civilian and a leader of the Liberal Party, he brought Honduras into the Central

American Common Market in 1960. He was deposed by a military coup.

Villehardouin, Geoffroi de (c.1150–c.1213), French historian. He was one of the leaders of the fourth crusade, which was responsible for the conquest of Constantinople and the establishment of the Latin Empire there. He received a title and lands in Thrace for his services.

Villein, medieval serf, an unfree peasant in the European FEUDAL SYSTEM. He was the chattel property of his lord and could be bought and sold. The labour shortage caused by the BLACK DEATH resulted in the gradual replacement of villeins by COPYHOLDERS. Villeinage in England had disappeared by the end of the 15th century.

Villette (1853), novel by Charlotte BRONTË. Taking the common theme of a governess's life, the story reflects Charlotte Brontë's own feelings of desperate love for M. Heger, who is given the character of Paul Emanuel in the book.

Villi, in anatomy, small, finger-like projections of a mucous membrane such as that which lines the inner walls of the small intestine. In digestion intestinal villi absorb most of the products of food broken down in the stomach and duodenum. Each villus contains blood capillaries, which receive PROTEINS and CARBOHYDRATES, and a lacteal or lymph capillary, which receives FATS. See also pp.160–161, 161.

Villiers, Barbara. See CLEVELAND, DUCHESS OF.

Villiers, George. See BUCKINGHAM, GEORGE VILLIERS, DUKE OF.

Villiers de L'Isle-Adam, Philippe Auguste Mathias (1838–89), French poet and dramatist. His short stories are collected in *Contes Cruels* (1883; tr. *Cruel Tales*, 1963), and perhaps his finest achievement is the visionary drama *Axel* (1886).

Villon, François (1430–c.1463), French lyric poet now considered the greatest of his day. Born François de Montcorbier or François des Loges, he took the name of his tutor, Guillaume de Villon. He took the degree of master at the Sorbonne in 1452 but led a troubled life after killing a priest in 1455. He wrote his famous *Ballad of a Hanged Man* while awaiting execution in 1462 (the sentence was later commuted to banishment).

Villon, Jacques (1875–1963), real name Gaston Duchamp, French painter and etcher, half-brother of the artists Marcel Duchamp and Raymond Duchamp-Villon. He was first influenced by IMPRESSIONISM and FAUVISM and later by CUBISM, which is reflected in the style of geometric abstraction which he developed about 1919.

Villot, Cardinal Jean (1905–79), Roman Catholic churchman who was appointed Secretary of State of the VATICAN CITY and Prefect of the Council for the Public Affairs of the Church in 1959.

Vimy Ridge, Battle of (1917), WWI campaign, fought in France. The Allies launched the attack on the German-held position in order to draw German reserves away from the main action on the river Aisne. On the Allied side the battle was fought almost entirely by the Canadian corps which, in its finest achievement of the war, succeeded in capturing the position in four days (14–17 April).

Vincennes, suburb of Paris, 8km (5 miles) E of Paris, on a wooded plateau in the Val-de-Marne département. Bois de Vincennes in the S, between Bois and the town, is a famous château (begun in the 12th century) and former royal residence. It was a state prison in the reign of Louis XIV.

Vincent de Paul, Saint (c.1580–1660), French priest called the Universal Patron of Works of Charity. As a young man he was captured by Barbary pirates and spent two years as a slave in Tunisia. After escaping back to France, he began a mission to the peasantry, founding the Congregation of the Mission (or Lazarists). Showing great organizing ability, he later helped to found the Daughters of Charity in 1633 to minister to the sick, the old and orphans.

Vincent of Beauvais (c.1190–1264), Dominican monk, regarded as a major

Encyclopaedist. Becoming a monk before 1220, he was patronized by Louis IX and compiled three parts of the *Speculum majus*, purportedly a summary of all contemporary knowledge.

Vincent of Lerins, Saint (d.c. 450), theologian. Born in Gaul, he became a priest in the Abbey of Lérins where he was noted for his learning. Some scholars take his *Commonitoria* to be in opposition to the theology of St Augustine.

Vinci, Leonardo da. See **LEONARDO DA VINCI**.

Vindication of the Rights of Women (1792), essay by the British writer Mary WOLLSTONECRAFT. Written in the early days of the French Revolution, it argued for the political and social equality of women.

Vine, plant with a long, thin stem that climbs rocks, other plants and supports. Vines develop modifications such as tendrils, disc-like holdfasts, adventitious roots and runners. Examples are tropical LIANAS, wild GRAPES, and MORNING GLORY. See also pp.675, 696-697, 699.

Vinegar, acid condiment made by fermenting malt to make alcohol, as in BREWING, then further fermenting the alcohol to ACETIC ACID. The alcohol fermentation is carried out by brewer's yeast (*Saccharomyces*) and the acid fermentation carried out by bacteria of the genus *Acetobacter*. The French "vinaigre" means sour wine.

Vinegar Hill, Battle of (1798), episode in the Irish Rebellion of 1798. The rebels who had captured Wexford made their headquarters at Vinegar Hill, Enniscorthy. It was attacked on 21 June by a powerful British force led by General Lake. The British victory was followed by the taking of Wexford Town and the collapse of the rebellion.

"Vingt, Les" (The Twenty or Société des Vingt), group of painters who exhibited in Brussels between 1891 and 1893. They were brought together by a common interest in SYMBOLISM. Members of the group included ENSOR, SEURAT, GAUGUIN and Van GOGH. Among their significant shows was an exhibition of the works of Henri de Toulouse-Lautrec in 1892.

Vinland (Wineland), area in North America discovered c.AD 1000 by LEIF ERICSSON. Whether his expedition was planned or accidental is unknown, but the probability is that as he sailed from Norway to Greenland his ship was blown off course to the s and w. What is certain is that he discovered a land containing grapes and self-sown wheat, which he called Vinland. His original landing was probably in Nova Scotia.

Vinland Map, world map showing Vinland. Allegedly drawn c.1440, a facsimile of the map was published in 1965 by YALE UNIVERSITY. The existence of the map was thought by some to prove that North America had been discovered before the voyages of Christopher COLUMBUS. The authenticity of the map, based on the script, paper and watermarks, was a subject of controversy until 1973, when it was judged fraudulent after an ink analysis revealed pigments known only after 1920.

Vintage car racing. See **MOTOR RACING**.

Vinyl chloride, gas with an ether-like odour (formula CH_2CHCl) manufactured by the chlorination of ethylene. It polymerizes to form polyvinyl chloride (PVC, the plastic) and is widely used in this form. Properties: m.p. -153.8°C (-244.8°F); b.p. -13.4°C (7.9°F).

Vinyl plastics, any of several substances composed of large molecules linked by the polymerization of vinyl compounds. They are used in plastic film, upholstery, floor tiles, toys, buttons and in fibres. The most common is PVC. See also p.588.

Viol, fretted stringed musical instrument, played with a bow; it was one of the most important instruments from the 15th to early 18th centuries. It is held on or between the knees and, in its most usual shape, has sloping shoulders and a flat back. The six strings are tuned in fourths, in the same manner as the LUTE. There were four principal sizes, and often a double bass viol, the violone, was added. A possible derivative, the modern DOUBLE BASS, is perhaps the only type of viol to

survive; it shows its ancestry by being tuned in fourths (unlike members of the violin family, which are tuned in fifths). See also p.1580.

Viola, stringed musical instrument of the violin family. It is 5cm (2in) longer than the violin and its four strings are tuned a fifth lower. It is the tenor member of a string quartet. See also pp.1580-1581.

Viola. See **PANSY**.

Violet, any of about 850 species of herbs, shrubs and small trees of the family Violaceae, found in all parts of the world. All cultivated species are of the genus *Viola*. Violets may be annual or perennial, with 5-petaled flowers that grow singly on stalks; usually blue, violet, lilac, yellow, or white. See also p.307.

Violin, stringed musical instrument. It is thought to have derived from the *lira da braccio*, a Renaissance bowed instrument, and the REBEC. It was perfected in Italy by the AMATI, STRADIVARI and GUARNIERI families between 1650 and 1740. The body is assembled from curved wooden panels, the front pierced by two f-shaped sound holes. Four taut strings are played by drawing a horsehair bow across them, or sometimes by plucking them with the fingers (pizzicato). See also pp.834, 835, 1580-1581.

Violoncello. See **CELLO**.

Violet-Le-Duc, Eugene (1814-79), French architect who was one of the leaders of the GOTHIC REVIVAL in France and well known for his restoration work on historic French buildings. Among his books on the theory of architecture is *Entretiens sur l'architecture* (1858-72). See also pp.1600, 1600, 1658.

Viotti, Giovanni Battista (1755-1824), Italian violinist and composer. In 1784 he became court musician to MARIE ANTOINETTE and after the French Revolution worked in London. He returned to Paris in 1818. As a virtuoso and composer, he made a significant contribution to the violin concerto.

Viper, any of 150 species of poisonous snakes characterized by a pair of long, hollow, venom-injecting fangs in the front of the upper jaw which can be folded back when not in use. The pit-vipers (of which the rattlesnake is an example) have a heat-sensitive organ between the eyes. The common adder (*Vipera berus*) of Europe and E Asia has a dark, zigzag band along its back. Length: to 3m (10ft). Family Viperidae.

Viper's bugloss. See **BUGLOSS**.

Virchow, Rudolf (1821-1902), German pathologist. His discovery that all cells arise from other cells completed the formulation of the cell theory and repudiated the theories of spontaneous generation. He also studied the nature of disease on a cellular level and established the science of cellular pathology.

Viren, Lasse (1949-), Finnish athlete. A dominating long distance runner of the early 1970s, he won gold medals for the 5,000m and 10,000m events at the Olympic Games of 1972 and 1976.

Vireo, any of 42 species of American songbirds. They have bristled forehead feathers, slightly downcurved bill and green, grey or yellow plumage. Family Vireonidae.

Virgil, or Vergil (70-19 BC), real name Publius Vergilius Maro, Roman poet. Virgil enjoyed the patronage of MAECENAS, who gave him a house near Naples, and was a friend of HORACE. He wrote the *Eclogues* (42-37 BC) and the *Georgics* (36-29 BC), and for the rest of his life wrote the *AENEID*, the epic tale of Aeneas' escape and adventures after the fall of Troy.

Virginal, keyboard musical instrument of the HARPSICHORD family; the strings, a single set running nearly parallel to the keyboard, are plucked by quills. Two instruments, each differing in size and pitch, were sometimes incorporated into the same case; the smaller could be removed and placed over the larger. Virginals were particularly popular in 16th- and 17th-century England.

Virgin Birth, term designating the orthodox Christian doctrine whereby Christ was conceived by the Blessed Virgin Mary through the power of the Holy Spirit. One

of the basic tenets of Catholicism, most Protestant Churches and of the Muslims, the belief has led to doctrinal argument concerning Mary's perpetual virginity in spite of childbirth.

Virginia, state in E USA, on the Atlantic coast, the most northerly of the southern states. The coastal plain is low lying and drained by the Potomac, Rappahannock, York and James rivers. There are extensive forests. To the w the Piedmont Plateau rises to the Blue Ridge Mts. Virginia's economy is varied. Farming is an important element and the chief crops include tobacco, peanuts, grain, vegetables, apples and peaches. Dairy farming and poultry raising are also important. Chemicals form the state's leading industry. Other industries include shipbuilding, fishing, transport equipment, food processing, textiles and wood products. Coal is the most important mineral deposit; stone, sand and gravel are also quarried. The principal cities are Richmond, the state capital, Norfolk and Newport News.

The first permanent British settlement in North America was made at Jamestown in 1607. Virginia, became a royal colony in 1624 and evolved an aristocratic plantation society based on vast tobacco holdings. Virginia's leaders, who included THOMAS JEFFERSON and GEORGE WASHINGTON, were in the forefront of the fight for American independence. Richmond became the Confederate capital and Virginia was the chief battleground of the AMERICAN CIVIL WAR. The state was readmitted to the Union in 1870, but its social and economic recovery after the War was slow. Area: 105,710sq km (40,814sq miles). Pop. (1980) 5,346,279. See also p.2161.

Virginia Companies, two English companies chartered by JAMES I in 1606 to establish colonies in America. The Virginia Company of London was to found a colony 100 miles inland from the coast between latitudes 34°N and 41°N, the Virginia Company of Plymouth one of the same size between latitudes 38°N and 45°N. The London Company founded the first permanent English colony in 1607, but lost its charter in 1624. The Plymouth, which was less successful, was reorganized as the Council for New England in 1620.

Virginia creeper, also called woodbine or American ivy, tendrill-climbing vine native to North America, but generally found only in eastern areas. It has leaves divided into five parts, green flower clusters and blue-black inedible berries. Family Vitaceae; species *Parthenocissus quinquefolia*.

Virgin Islands. See **BRITISH VIRGIN ISLANDS**; **VIRGIN ISLANDS OF THE UNITED STATES**.

Virgin Islands of the United States, group of 68 islands in the Lesser Antilles, in the West Indies, administered by the USA. The chief islands are St Croix and St Thomas, which includes the capital Charlotte Amalie. Livestock raising and the cultivation of sugar cane are the chief farming activities. The islands were Danish until 1917, when they were bought by the USA. Area: 344sq km (133sq miles). Pop. (1975 est.) 92,000. See also MW p.182.

Virgin Mary. See **MARY, SAINT OR BLESSED VIRGIN MARY**.

Virgo, or the Virgin, equatorial constellation on the ecliptic between Leo and Libra. It lies in a region of the sky that has many galaxies and galaxy clusters. The brightest star is the 1st-magnitude Alpha Virginis, or Spica. See also pp.1004, 1006, 1007, 1015, 1015, 1020, 1021, 1894-1895, 1894-1895.

Virology, study of VIRUSES. The existence of viruses was established in 1892 by D. Ivanovski, a Russian botanist, who found that the causative agent of tobacco mosaic disease could pass through a porcelain filter impermeable to BACTERIA. Bacteriophages (viruses that infect bacteria) were discovered in 1915. The introduction of the electron microscope in the 1940s made it possible to view viruses.

Virtanen, Artturi Ilmari (1895-1973), Finnish biochemist who was awarded the 1945 Nobel Prize in chemistry for his work on fodder preservation. During the

1920s he discovered that fermentation in green fodder, which ruins silage stores, could be prevented by the addition of hydrochloric and sulphuric acids. He also found that this technique, known as the AIV method, had no detrimental effects on the nutritional qualities or edibility of the fodder.

Virus, sub-microscopic infectious organism. Viruses vary in size from 10 to 300 nanometres (1 nanometre = 1 millionth of a millimetre), and contain only genetic material, in the form of deoxy-ribonucleic acid (DNA) or ribonucleic acid (RNA). This is enclosed in a PROTEIN coat known as the capsid.

Viruses can grow and reproduce only when they enter another cell, such as a bacterium or animal cell, because they lack energy-producing and protein-synthesizing functions. When they enter a cell, the host's metabolism is subverted so that viral reproduction is favoured. Pathogenesis is the result of cell death or altered metabolism as the virus multiplies.

Control of viruses is difficult because harsh measures are required to kill them. The animal body has, however, evolved some protective measures, such as production of INTERFERON and of ANTIBODIES directed against specific viruses. One attack of certain viral diseases confers lifetime immunity to the survivors. Where the specific agent can be isolated, VACCINES can be developed, but some viruses (such as influenza) change so rapidly that vaccines become ineffective. See also VIRUS INFECTIONS; pp.15, 190, 910, 1060.

Virus infections, diseases caused by VIRUSES, among the greatest health problems facing man now that ANTIBIOTICS have achieved some measure of control over bacterial infections. Many virus infections can be treated only with specific VACCINES and antisera. Notable amongst viral infections affecting man are SMALLPOX, YELLOW FEVER, RABIES, INFLUENZA (FLU), MEASLES and POLIOMYELITIS. Viruses are also responsible for many diseases in plants, in which they are particularly difficult to control. The role of viruses in causing CANCER has been the subject of research since this effect was discovered in 1908. Living cells gain some protection by their own production of INTERFERON, which leads to the formation of another protein virus inhibitor. See also p.1061.

Visayan Islands, also known as Bisayas, island group in the central Philippines, comprised of Cebu, Leyte, Masbate, Negros, Panay, Samar and many small islands. Cebu, Negros and Panay are the commercial heart of the group; the port of Cebu is the second largest in the Philippines, after Manila. Area: approx. 61,077sq km (23,582sq miles). Pop. (1970) 9,273,937.

Viscacha, South American rodent closely related to the CHINCHILLA. Its fur is not commercially valuable. Family Chinchillidae; species *Lagostomus maximus* (plains viscacha), *Lagidium peruanum* (mountain viscacha). See also pp.300, 301.

Vischer, name of a family of German sculptors and bronze-workers. Peter, the elder (c.1460-1529), was one of the greatest bronze casters of all time. He was trained by his father, Hermann (d.1488), and influenced to some extent by Italian art. His masterpiece is the tomb of St Sebaldus in Nuremberg (1508-19). Of his five sons who carried on his work, the most celebrated were Hermann, the younger (c.1486-1517) and Peter, the younger (1487-1528).

Visconti, Italian family that ruled Milan from the 13th century until 1447. Ottone Visconti (c.1207-95), appointed (1262) archbishop of Milan by Pope Urban IV, used his position to become the first Visconti Signore (lord) of Milan. Supporters of the Ghibellines, the Visconti established their control over Lombardy in the 14th century, and in 1349 the title of Signore became hereditary. Visconti lordship of Milan passed to the Sforza family after the death of Filippo Maria Visconti in 1447.

Visconti, Luchino (1906-76), Italian film

Viscose

director who made his debut in 1942 with *Ossessione*. His other films include *Bellissima* (1951), *Senso* (1953), *Rocco and His Brothers* (1960), *Death in Venice* (1971) and *Conversation Piece* (1976).

Viscose. See RAYON.

Viscosity, internal friction of a liquid or gas. In the flow of a liquid through a pipe, the central portion moves the fastest and the layers next to the pipe barely move. Thus layers of the fluid are sliding over one another; the more viscous the liquid, the slower it flows. Viscosity is large for liquids and extremely small for gases. In most liquids, it increases with decreasing temperature. See also p.839.

Viscount, rank of the nobility in Britain, falling below an earl and above a baron. A viscount is entitled to sit in the House of Lords; he is addressed as the Right Honourable and his coronet has 16 pearls set around its edge. Viscount is also a subsidiary title of a number of earls. The last viscount created was in 1964.

Vishnu, in Hindu mythology, one of the supreme triad with Brahma and Shiva. He reigns in heaven with his wife LAKSHMI, the goddess of wealth, as the most important solar deity. Vishnu is depicted as a young man with four hands holding a shell, discus, mace and lotus. As Vishnu he was worshipped as a preserver and restorer; and other incarnations include RAMA and KRISHNA. See also pp.1361, 1906-1907.

Visigoths. See GOTH.

Vision. See SIGHT.

Vision, in religion, sensory experience of spiritual or earthly events, remote in space and time, by individuals especially chosen by divine election. Biblical examples are numerous and usually involve the transmission to humanity of divine revelation, but visions are part of the experience of many religious groups, notably American Indians, Hindus and Christian saints and mystics.

Vistula (Wista), longest river in Poland. It rises in the Carpathian Mts of w Poland and flows NE past Kraków, turns NW through Warsaw and then flows NW through Toruń to enter the Gulf of Danzig at Gdańsk. It is the major waterway of Poland, and serves a large area through its tributary system, which includes the Bug, San, Wisłoka and Pilica rivers. Canals link it with other important rivers. Length: 1,068km (663 miles).

Visual purple. See RHODOPSIN.

Vitale da Bologna (fl. 1330-61), Italian painter and a founder of the Bolognese school of art. His panel and fresco paintings show a strong Sienese influence. The panels entitled *Life of St Anthony Abbot* are highly detailed and original in surface treatment.

Vitalianus, Saint (d.672), Pope (r.657-72). His election was confirmed by Emperor Constant II, whom Vitalianus ceremonially received into Rome in 663. Constant nonetheless supported the rejection by Maurus, Archbishop of Ravenna, of control from Rome. Vitalianus was interested in the development of the Anglo-Saxon Church and consecrated THEODORE OF TARSUS as Archbishop of Canterbury.

Vitalism, philosophical theory that living matter is essentially different, and not reducible to mechanisms. Vitalists hold that various "powers", eg BERGSON's "élan vital", are operative in the behaviour of living organisms.

Vitamin deficiency, lack of a sufficient amount of a vitamin in the diet, generally resulting in one or another form of deficiency disease. Deficiency of vitamin C causes scurvy; of vitamin D, rickets; of B vitamins, beriberi, pellagra, pernicious anaemia and forms of dermatitis; of vitamin A, dry eyes and night blindness; and deficiency of vitamin E causes sterility in rats, if not in human beings. Most people in the western world get all the vitamins they need from a normal, balanced diet. See also pp.1060-1061.

Vitamins, organic compounds that are essential in small amounts to the maintenance and growth of higher animals. The name is a contraction of vital amines. They are usually taken in the diet but some are synthesized in the body: vitamin B₁₂ is

synthesized in the intestine, and vitamin D is synthesized on the skin when it is exposed to sunlight. Vitamins act as COENZYMES in the regulation of energy transformation and the catalysis of such metabolic processes as the production of HORMONES, the synthesis of cell components and in the detoxification of body wastes. Today most vitamins can be made synthetically, and they are classified in three ways: alphabetically; as either water or fat soluble; or according to their chemical composition. Lack of a particular vitamin can lead to a DEFICIENCY DISEASE.

Vitrac, Roger (1899-1952), French poet and dramatist who followed in the footsteps of DADAISM and SURREALISM. He was associated with Antonin Artaud and with him founded the Théâtre Alfred Jarry where he produced his own play *Victor ou Les Enfants au Pouvoir* (1928). His plays include *Le Loup-Garou* (1939) and *Le Sabre de mon Père* (1951).

Vitreous humour, transparent jelly-like medium which fills the eyeball between the lens and the retina. It constitutes the vitreous body, which serves to hold the retina in position and combines with the lens to ensure the clear passage of light to the receptor cells of the retina. See also AQUEOUS HUMOUR; pp.136-137.

Vitrification, in ceramics, process of producing a glassy phase or close crystallization by firing at a high temperature. Vitrified clay becomes non-porous and loses its plasticity. See also p.546.

Vitriol. See SULPHURIC ACID.

Vitruvius (fl. early 1st century AD), Roman architect and engineer, b. Marcus Vitruvius Pollio. His ten-volume *De Architectura* (before AD 27), an encyclopaedic work covering almost every aspect of ancient architecture including town planning, types of buildings and materials, was used by Renaissance artists and architects as their chief reference on architectural theory.

Vittoria, Battle of (1813), victory of British, Spanish and Portuguese forces under the Duke of WELLINGTON over a French army under King Joseph Bonaparte. The Battle was part of the PENINSULAR WAR and resulted in the expulsion of the French from Spain.

Vittorio Veneto, town near the foothills of the Alps in the Veneto region of Italy. It is situated on the Piave line, the Italian front in WWI, and was the scene of a series of battles between 24 Oct. and 4 Nov. 1918 which brought about the surrender of the Austrian forces.

Vitus, Saint (fl. 4th century), Italian martyr. Secretly raised as a Christian by his nurse, he was put to death during the persecutions of DIOCLETIAN. The patron saint of actors, his intercession is invoked against sudden death, St Vitus' dance and hydrophobia (rabies).

Vivaldi, Antonio (c. 1675-1741), Italian composer. A master of the concerto and a virtuoso violinist, he helped to standardize the three-movement concerto form and to develop the *concerto grosso* (a concerto for two or more solo instruments). His best-known work is *The Four Seasons* (1725). See also pp.1484, 1484-1485.

Vivarini, Antonio (c. 1415-c. 1476), Italian painter. The founding father of a prominent family of Italian painters of the VENETIAN SCHOOL, he worked in the late GOTHIC style. He worked, mostly in collaboration with relatives, on large, elaborately framed altarpieces. His son Alvise (c. 1445-c. 1505), also a painter of the Venetian school, was influenced by Giovanni BELLINI and ANTONELLO DA MESSINA. He became an influential teacher, and his pupils included Lorenzo LOTTO and Jacopo de' BARBARI.

Vivisection, the dissection of living bodies. Work with laboratory animals in testing drugs, vaccines and pharmaceuticals frequently involves such dissections. The smaller animals such as rats, mice and hamsters are usually killed painlessly after the survey of the test results. The ethical issue of experimenting on living animals is still a matter of controversy, because alternative methods may be available, if not as cheap or convenient to use.

Vizsla, pointer and retriever breed of dog

with innate hunting ability; also called Hungarian pointer. The rusty gold or dark sandy yellow coat is short, smooth and dense. Height: to 63.5cm (25in) at the shoulder; weight: to 34kg (75lb).

V-J Day (2 Sept. 1945), the day WWII ended in the Pacific. Japan surrendered to the Allies on board the USS *Missouri* in Tokyo Bay.

Vladimir, name of two Russian rulers: Vladimir I (c.956-1015), an Orthodox saint, became Grand Prince of Kiev in 980 after overcoming his half-brother. Converted to Christianity c.987, he became the first Christian to rule in Russia and spent much of the rest of his life working to end pagan practices. Vladimir II (Monomakh) (1053-1125), was Grand Prince of Kiev from 1113. A strong, successful ruler, he helped to restore order among his feuding cousins and prevented civil war. See also pp.1454-1455.

Vladivostok, port in the Russian SFSR (Rossijskaja SFSR), USSR, on the Sea of Japan; chief Soviet Pacific port and a principal city in the Soviet Far East. Founded in 1860 as a military post, the city developed as a naval base after 1872, and it was used as a major supply depot by the Allies in WWI. Vladivostok is the terminus of the Trans-Siberian Railroad which connects the city with Moscow. The harbour is kept open in winter by ice breakers and is a major base for whaling and fishing fleets, and the principal base for the Soviet navy in the Pacific. Industries include ship repairing, metal working and food processing. Pop. (1980) 558,000.

Vlaminck, Maurice (1876-1958), French painter. Largely self-taught, he was an early FAUVIST who was successively influenced by Vincent van Gogh, African sculpture and Paul CÉZANNE.

Vltava, longest river in Czechoslovakia. It rises in the Bohemian Forest in sw Czechoslovakia and flows SE then N to join the River Elbe at Melník. Length: 435km (270 miles).

Vocal cords. See LARYNX; VOICE.

Vocational guidance, advice on the choice of a career. Its extent varies widely, from simple advice often given in schools according to a person's preferences, to that given by psychologists based on the results of aptitude tests, personality tests and interviews.

Vodka, colourless alcoholic spirit distilled from fermented rye and wheat, or sometimes from potatoes. It is commonly made in Russia and Poland. Most natural flavouring constituents of vodka are eliminated in the course of its preparation and so others, such as herbs, berries, or fruits, are often added after the neutral liquor has been produced. See also p.703.

Vodun. See VOODOO.

Vodyanoy, in Slavic mythology, an evil, destructive freshwater spirit. The Vodyanoy would seize and enslave people imprudent enough to swim in ponds after sunset.

Vogel, Sir Julius (1835-99), New Zealand politician, b. London. He moved to New Zealand in 1852, and became colonial treasurer (1869-72) and Prime Minister (1873-75, 1876), during which time he sponsored public works.

Vogt, Alfred Elton van (1912-), Canadian SCIENCE FICTION writer. His first SF work was a short story, *Black Destroyer* (1939), which was later incorporated into the novel *The Voyage of the Space Beagle* (1950). He soon gained international popularity with his many books, which include *The World of Null-A* (1956) and *Battle for Forever* (1971).

Vogt, Hans (1890-), German electrical engineer and inventor. Working with Dr J. Engl and Joseph Massolle between 1918 and 1925, he invented a sound motion pictures film that carried on it the recording of the sound.

Voice, in human beings, sound produced by air from the lungs passing through the vocal cords, causing them to vibrate. The cords are two wedge-shaped bands of fibrous, elastic tissue attached to the cartilage of the LARYNX (voice-box), which bulges in the front of the neck as the Adam's apple. The respiratory tract above the larynx acts as a resonating chamber,

lending the voice its particular timbre. The voice of a bird is produced differently by a vocal apparatus called the SYRINX, located at the base of the windpipe.

Voice, in grammar, mode of inflecting verbs to indicate whether the subject acts (active voice), is acted upon (passive voice) or acts so as to affect itself (middle voice).

Volcanism, or vulcanism, volcanic activity. The term is a general one and includes all aspects of the process: the eruption of molten and gaseous matter, the building up of cones and mountains and the formation of lava flows, geysers and hot springs. See also p.204.

Volcano, vent from which molten rock or lava, solid rock debris and gases issue. The term is also applied to the pile of rock around the vent. Volcanoes may be of the central vent type, where the material erupts from a single pipe, or of the fissure type, where material is extruded along an extensive fracture, building plains and plateaus. Volcanoes are usually classed as active, dormant or extinct. See also pp.204-205, 214.

Vole, short-tailed, small-eared, prolific rodent living wild in the Northern Hemisphere. Most voles are greyish-brown, herbivorous ground-dwellers and quite small. The semi-aquatic water vole is the largest. Length: to 18cm (7in). Family Cricetidae. See also pp.304, 321.

Volga, river in E European USSR; the longest river in Europe and the principal one in the USSR. The drainage basin of the Volga covers approx. one third of European USSR. The river rises in the Valdai Hills, flows E past RZEV and Kalinin and through the Rybinsk Reservoir to Kazan', where it turns S and continues past Uljanovsk, making a hairpin bend at Kujbysev. It continues SW to Volgograd (Stalingrad) and SE to enter the Caspian Sea through a wide delta below Astrakhan'. The Volga is connected to the Baltic Sea by the Volga-Baltic Waterway, with Moscow by the Moscow Canal, and with the Black Sea and the Sea of Azov by the Volga-Don Canal. Many dams and hydroelectric power stations have been constructed along the river's course, and more than half of all river freight in the USSR is transported on the Volga. Its waters are used to irrigate the steppes of the lower Volga region. The river is navigable for almost all of its course. Length: 3,692km (2,293 miles).

Volgograd, formerly known as Stalingrad, seaport in SW Russian SFSR, USSR, on the River Volga and the E terminus of the Volga-Don Canal. Founded in 1589, the port was taken by COSSACKS in 1670. The city was defended by Soviet troops under STALIN in 1918 and renamed in his honour, but was almost completely destroyed by WWII. Renamed again in 1961, Volgograd is a major rail and heavy industry centre. Industries include oil refining, ship building, flour milling and the production of chemicals and steel. A major hydroelectric power station was completed in 1960. Pop. (1980) 939,000.

Volkswagen, literally "car for the people", name of a German range of cars made by Volkswagenwerk A.G. The best-known, the "Beetle", was planned in 1934 and designed by Ferdinand Porsche. First produced in 1936, the air-cooled rear-engined design proved internationally popular and had changed very little when the model was discontinued in 1977. See also p.493.

Volkswagenwerk A.G., West German car manufacturing corporation. It was founded in 1936, and its mid-1970s workforce numbered about 200,000 people. See also p.493.

Vollard, Ambroise (1865-1939), French art collector, dealer and publisher, who championed unknown artists of the time, including CHAGALL, ROUAULT and VLAMINCK. He opened a gallery in Paris (1893) where the first one-man exhibitions of CÉZANNE (1898), PICASSO (1901) and MATISSE (1904) were held.

Volleyball, sport played indoors or outdoors. A court is divided into two 30-ft (9.1m) squares by an upright net which stands 8ft. (2.4m) from the ground. Two

teams, each of six players, take up positions on either side of the net. The serving team uses an open hand or fist to volley an inflated rubber or leather ball, about 27in (68.6cm) in circumference, over the net and the opponents must return it before it hits the ground. Points are scored only by the serving team and 15 points are needed to win. Volleyball originated in the USA in 1895 and was included in the Olympic Games since 1964.

Volsunga saga, Icelandic saga, probably written c.1270. A Scandinavian prose version of the German Nibelungenlied, it tells of the mythical Völsungs and how a magic sword, won from ODIN, was broken but reforged by Sigurd (the German SIEGFRIED).

Volt, unit of electric potential difference, or voltage. It is the difference of potential between two points on a conducting wire carrying a constant current of one ampere when the power dissipated between these points is one watt. The volt is also the unit of electromotive force (EMF).

Volta, Count Alessandro Giuseppe Antonio Anastasio (1745–1827), Italian physicist who in 1800 invented the first electric battery, the voltaic pile. He also invented a charge-accumulating machine which incorporated the principle of some modern electrical condensers. His investigations into electricity led him to interpret correctly Luigi GALVANI's experiments with muscles, showing that the metal electrodes and not the tissue generated the current. The volt was named in his honour. See also pp.902, 902, 1476, 1477, 1637.

Volta, principal river of Ghana. Formed by the confluence of the Black Volta and White Volta rivers, which rise in Upper Volta, it flows SE to Ada, on the Guinea coast. Length (including Lake Volta, an artificial lake completed in 1967): 483km (300 miles).

Voltage, measure of the electrical potential difference between two points in a circuit. Two points are at a potential difference of one volt if one coulomb of electricity (electric charge) does one joule of work in flowing between them. Voltage is also given by the RESISTANCE multiplied by the CURRENT (using OHM'S LAW).

Voltaire (1694–1778), pseudonym of François Marie Arouet, French philosopher, historian and poet, the outstanding figure of the French Enlightenment. He spent much of his life combating intolerance and injustice. His *Philosophical Letters* were published in 1734. He wrote several tragedies, including *Brutus* (1730) and *Zaire* (1732), the comedy *Mérope* (1743), and the philosophical novel *Candide* (1759). He contributed to the *Encyclopédie* of Diderot, wrote the *Century of Louis XIV* (1751) and outlined his view of morality in *Essay on Morals* (1756). He was a lifelong opponent of the Catholic Church. See also pp.1459, 1466–1467, 1479.

Volterra, Daniele Ricciarelli da (1509–66), Italian MANNERIST painter and sculptor, a close acquaintance of MICHELANGELO. *Descent from the Cross* (1541) in SS Trinità dei Monti, Rome, is the most famous of his paintings.

Voltmeter, instrument for measuring the potential difference between two points in an electrical circuit. Voltmeters are therefore always connected across (in parallel with) the components whose potential differences (voltages) are being measured. A voltmeter has a high internal resistance (compared with the resistance across which it is connected) so that it takes a negligible proportion of the circuit's current – which affects the voltage. See also AMMETER.

Volume, measure of the amount of space taken up by a body. Volume is the mass of a body divided by its density, and is measured in cubic units, eg cm³, ft³ or m³.

Volumetric analysis, in chemistry, widely used method of finding the concentration of solutions. The solution of unknown strength is titrated against one of known strength which reacts with it. The point of complete reaction, the end point, is often shown by a change in colour of an INDICATOR also present. The quantity of known

solution used, together with knowledge of the reaction involved, allows a chemist to calculate the concentration of the unknown solution. End points of titrations may also be detected electrometrically using a voltmeter. See also QUANTITATIVE ANALYSIS; pp.904, 905.

Voluntary muscle, also called skeletal, or striped muscle, the muscle that moves the limbs, trunk and head and (unlike muscle of the heart, gut and other internal organs) is under conscious control. Microscopically it is seen to consist of fine fibres having a banded, or striped appearance. These are grouped together in bundles, which are in turn bundled together to make the individual muscles. See also INVOLUNTARY MUSCLE; pp.148–149.

Volvox, genus of tiny, single-celled green ALGAE. It forms hollow, spherical colonies, barely visible to the naked eye. The lashing of the whip-like flagella of the colony's members makes the whole colony turn slowly about a definite axis. See also p.358.

Von Braun, Wernher (1912–77), German engineer, known for his role in many aspects of rocketry and space exploration. In 1929 he began experiments with liquid-fuel rockets and he was instrumental in the development of the German V2 ROCKET. In 1945 he went to the USA and directed the Redstone rocket programme which launched the first US satellite, Explorer I (1958).

Vondel, Joost van den (1587–1679), Dutch poet and dramatist. One of the last Dutch writers of Renaissance principles, he struggled against humble birth, limited education and religious persecution to produce outstanding work based on biblical and classical sources. The tragedy *Lucifer* (1654) is his masterpiece.

Von Euler, Ulf. See EULER, ULF VON.

Von Frisch, Karl. See FRISCH, KARL VON.

Von Haast, Sir Julius (1822–87), New Zealand colonist and scientist, b. Germany. He explored the South Island, discovering the coal deposit of the West Coast. He was the first European to see Haast's Pass and the Franz Josef glacier. **Vonnegut, Kurt, Jr** (1922–), US writer whose bizarre novels and short stories used black humour to deplore the horrors of the 20th century. His books include *Player Piano* (1952), *Slaughterhouse Five* (1969), *Breakfast at Champions* (1973) and *Slapstick* (1976).

Von Sydow, Max. See SYDOW, MAX VON.

Voodoo, religious belief derived from the God Vodun. It is prevalent in parts of Africa, and is the national religion of Haiti. Adherents believe in the reincarnate qualities of Loa, which include deified ancestors, local gods or Roman Catholic saints. Roman Catholicism became incorporated into voodoo during early French colonialism. Loa possesses the believers during dreams or ceremonies, which include dancing and hypnotic trances. In Haiti voodoo is exploited commercially for its tourist potential.

Voroshilov, Kliment Yefremovich (1881–1969), President of the USSR from Stalin's death (1953) to 1960. He took a military rather than political role during the Russian Revolution (1917) and was commissar for defence (1925–40) until the initial Soviet defeats in WWII. He held responsible posts until he retired in 1960.

Vorster, Balthazar Johannes (1915–), South African political leader. Elected to parliament in 1953 as a member of the Nationalist Party, he was Minister of Justice from 1961 to 1966. He succeeded Hendrik VERWOERD as Prime Minister in 1966. Although friendly to black African leaders, he ruthlessly crushed internal opposition to his segregationist policies. Elected President in 1978 he was forced to resign in 1979 when it was proved that he had withheld knowledge of the misappropriation of State funds.

Vorticism, British art movement. Derived from CUBISM and Italian FUTURISM, it was originated by Wyndham LEWIS in 1912 and was an attempt to express the zeitgeist (spirit of the time) in harsh angular forms derived from machinery. The artists Edward Wadsworth, David BOMBERG, Henry GAUDIER-BRZESKA and Jacob

Epstein were members of the movement. The Vorticists' only exhibition took place in 1915. See also HC2 p.280.

Vos, de, name of two Flemish painters. Cornelis de (c.1584–1651) worked for RUBENS. His family portraits are in the style of Rubens and VAN DYCK, and have been mistaken for theirs. His brother Paul (c.1596–1678), was a painter of lively hunting scenes and large still-lives. His art has much in common with that of his brother-in-law, Frans SNYDERS.

Vostok 1, first of a series of manned spacecraft placed into Earth orbit by the USSR on 12 April 1961. It was launched by the two-stage Vostok rocket and carried cosmonaut Yuri GAGARIN. Vostok is an improved version of the Vostok launcher. See also pp.1026, 1027, 1040.

Vote, right conferred upon members of a group or society to express in an ELECTION, REFERENDUM, parliamentary division or similar formal function their preference, either of people or proposals. The vote may be expressed by voice, by the raising of hands or by Secret BALLOT. See also SUFFRAGE; REFORM BILLS.

Voysey, Charles Francis Annesley (1857–1941), British architect and designer. The Pastures (1901), at North Luffenham in Leicestershire, England, is a good example of his style: a long, low building, with rough-cast walls, and low roof.

Vries, Hugo de. See DE VRIES, HUGO.

V2 rocket, large liquid-fueled rocket developed by the Germans during WWII; the first ballistic missile used in war. The name was an abbreviation for *Vergeltungswaffen zwei*, German for "Vengeance Weapon Number Two". See also p.563.

Vuillard, Jean-Edouard (1868–1940), French painter and printmaker, a leading member of the NABIS. He developed a distinctive style of INTIMISM characterized by simplicity and richness of texture and pattern. He specialized in interiors and street scenes.

Vulcan, Roman god of fire and volcanoes, originally called Volcanus. His temples were prudently sited outside city walls. Often invoked to avert fires, he was associated with thunderbolts and the Sun, and was finally interpreted in terms of life-giving warmth. His main festival, the Vulcanalia, was held on 23 August.

Vulcanization, chemical process, discovered in 1839, of heating sulphur or its compounds with natural or synthetic rubber of improve its durability and resilience. See also p.588.

Vulgate, oldest surviving version of the complete Bible, compiled and translated, mostly from Greek, into Latin by St JEROME for Pope DAMASUS I from 382. The text was revised several times and was used universally in the Middle Ages. It was promoted as the official Latin translation in 1546 by the Council of TRENT, reacting to demands for vernacular versions from the leaders of the REFORMATION. It was again revised, by the Benedictines, in 1933.

Vulture, large, keen-sighted, strong-flying bird that feeds on carrion. New World vultures, forming a distinct family, are found throughout the Americas and include the CONDOR, turkey BUZZARD and king vulture; family Cathartidae. Old World vultures, related to eagles, are found in Africa, Europe and Asia and include the Egyptian vulture and the griffon vulture; family Accipitridae. See also p.80.

Vulva, in females, the external genitalia. A pair of fleshy lips (labia majora) surround the vulvar orifice. Within them two smaller folds of skin (labia minora) surround a small depression called the vestibule, within which are the urethral and vaginal openings. See also p.164.

Vyshinski, Andrei Yanuarievich (1883–1954), Soviet politician. Originally a Menshevik, he joined the Bolshevik party during the Civil War. With the outbreak of WWII Vyshinski became deputy commissar for foreign affairs (1940–49) and foreign minister (1949–53). In 1953 he was appointed permanent Soviet delegate to the UN.

Alessandro Volta became a count and a senator of the kingdom of Lombardy.

Volvox colonies may contain between 500 and 50,000 individual flagellates.

Vultures will soar effortlessly for long periods on their broad wings.

Andrei Vyshinski, photographed in 1933 when he was deputy state prosecutor.

Virginia Wade won the women's singles championship at Wimbledon in 1977.

Wagner, painted by Renoir; his work greatly influenced contemporary thought.

Wagtail; the yellow wagtail, the only species to reach the New World, breeds in Alaska.

Kurt Waldheim explaining his peace plan for a divided Cyprus to the UN in 1975.

W

W, 23rd letter of the alphabet which, like *f*, *u*, *v* and *y*, was derived from the Semitic letter *waw* (meaning *hook*). The Romans wrote it like a *V*, first pronouncing it like a *w* and later as a *v*. Norman-French writers of the 11th century created the modern form of the letter by doubling a *u* or *v* to represent the Anglo-Saxon letter *wyn*, which had no counterpart in their alphabet. In English *w* has a consonant sound, as in *war* and *row*, and is silent in such words as *answer* and *wring*. In some combinations with *h* the *w* is also silent (as in *who* and *whom*) and in others it is the *h* that is not pronounced (as in *which* and *what*). See also pp.608-609.

Waal, Johannes Diderik van der. See VAN DER WAALS, JOHANNES DIDERIK.

Wace, Robert (c.1100-75), Anglo-Norman poet and chronicler, *b.* Jersey and educated in France. He wrote several lives of the saints in verse, the *Roman de Rou* (an epic of the exploits of the Dukes of Normandy), and the *Roman de Brut*, based on Geoffrey of Monmouth's *Historia Regum Britanniae*.

Waddell, Helen Jane (1889-1965), British scholar, a specialist in medieval studies. Her books include *The Wandering Scholars* (1927), an account of the poets of the later Middle Ages, and *Medieval Latin Lyrics* (1929).

Wade, Sarah Virginia (1945-), British tennis player. She won the US women's singles title in 1968, the Australian championship in 1972 and Wimbledon in 1977.

Wadi, gorge cut into the solid rock of an arid area. Wadis are water-formed features, but contain streams only during the rainy seasons. See also p.229.

Wad Medani, city in the Sudan on the Blue Nile, 161km (100 miles) SSE of Khartoum and on the railway from Khartoum to Sannar. It is the capital of Blue Nile province. Pop. 82,000.

Wagner, Otto (1841-1918), Austrian architect. He synthesized architecture and technology in an ambitious programme of modern design for public buildings and utilities in Vienna. His book *Moderne Architektur* (1895) had wide influence throughout Europe and particularly on his pupils Joseph Olbrich and Josef Hoffmann.

Wagner, Richard (1813-85), German composer. His works consist entirely of opera, for which he provided his own libretti. It was with Wagner's work that German Romantic music received its fullest expression. His early operas include *Rienzi* (1842), *The Flying Dutchman* (1843) and *Tannhäuser* (1845). With *Tristan and Isolde* (1865) and *The Ring of the Nibelungs* (1851-74) the genius of Wagner is fully displayed. The innovations that he introduced to operatic form were vast and served to fuse the elements of music and stage drama as one. Other operas include the *Mastersingers of Nuremberg* (1868) and the sacred stage drama *Parsifal* (1882).

Wagner von Jauregg, Julius (1857-1940), Austrian neurologist and psychiatrist. He was awarded the 1927 Nobel Prize in physiology and medicine for his discovery of a treatment for the general paralysis caused by malaria.

Wagon trains, convoys of large wagons which were the principal method of migration westward in the USA from the late 18th century until the advent of railways. Settlers usually travelled in groups as defence against Indians. The greatest wagon trains were those which crossed the GREAT PLAINS and the ROCKY MOUNTAINS along the OREGON TRAIL and the SANTA FE TRAIL.

Wagram, Battle of (1809), military engagement resulting in victory for the French army under NAPOLEON over the Austrian army under the Archduke Charles during the NAPOLEONIC WARS. It took place on the Marchfeld, a plain NE of Vienna, and lasted for two days (5-6 July). The French army numbered about

154,000 men, the Austrian about 158,000. The French casualties were 34,000 men; Austrian losses were 40,000. After their defeat the Austrians were compelled to sign the Treaty of SCHÖNBRUNN.

Wagstaff, Harold (1891-1939), British rugby league centre who made his senior debut for Huddersfield at the age of 15 and later captained their "team of all the talents". One of the game's greatest players, he played 13 times for Great Britain (1911-22), having played for England against the Australians at the age of 17.

Wagtail, any of several species of mainly Old World birds that live near streams; it wags its long tail while foraging for insects. Family Motacillidae.

Wahhabism, puritanical Muslim movement founded in Arabia by Mohammed ibn 'Abd al-Wahhab (1703-92). The movement stresses the absolute oneness of God, literal belief in the KORAN and Hadith (Islamic tradition), the inseparability of belief from ethical action, belief in predestination, rejection of all non-orthodox views (such as SUFISM), and the need to establish the Muslim state on Islamic law alone.

Waikato, longest river in New Zealand, in central and NW North Island; rises from Lake Taupo in the central highlands, and flows NNW into the Tasman Sea. Hydroelectric schemes along the river provide power for most of North Island. The river is navigable for 129km (80 miles). Length: 425km (264 miles). It is also the name of a district.

Wailing Wall, or Western Wall, place in Jerusalem sacred to all Jews. It is a remnant of a wall of the great Temple destroyed by the Romans in AD 70, and is the focus of many pilgrimages. Jews publicly mourn the Temple's destruction at the wall.

Wain, John Barrington (1925-), British poet, novelist and critic who published his poetry in *Mixed Feelings* (1951), *New Lines* (1956) and *Wildtrack* (1965). His novels include *Hurry on Down* (1953) and *The Young Visitors* (1965).

Waitangi, Treaty of (1840), pact between Britain and several New Zealand MAORI tribes. The agreement protected and provided rights for Maoris, guaranteeing them possession of certain tracts of land, while permitting Britain formally to annex the islands and purchase other land areas from the Maoris. See also pp.1604, 1604.

Waiting for Godot (1952), Theatre of the Absurd tragic-comedy written by Samuel BECKETT. Illustrating their boredom and disenchantment with life, the two tramp-like characters, Vladimir and Estragon, loiter on a nearly barren stage, awaiting Godot, who never comes. See also p.1767.

Waltz, Theodor (1821-64), German anthropological psychologist. He wrote extensively on psychology and is the author of *Anthropologie der Naturvölker* (1859-71).

Wajda, Andrzej (1926-), Polish film director whose trilogy *A Generation* (1954), *Canal* (1957) and *Ashes and Diamonds* (1958) was a turning-point in modern Polish cinema. His films examine Poland's historic place in WWII (*Lotna*, 1959), express the unhappiness of adolescent sexuality (*Love at Twenty*, 1962) and include a personal film (*Everything for Sale*, 1968) about the death of his friend, actor Zbigniew Cybulski, the star of his trilogy.

Waka, Japanese courtly poetry, written in the 6th-14th centuries AD. It has various different forms, ranging from long "choka" poetry to the epigrammatic "tanka". The term refers to poetry written in Japanese, or in a Japanese style, rather than in the Chinese language or idiom.

Wakamatsu. See KITAKYUSHO.

Wakefield, Edward Gibbon (1796-1862), British colonial reformer. He came to notice with the publication of a *Letter from Sydney* (1829), in which he argued for a rational system of the sale of Crown lands in the colonies, the revenue from which could be used to assist emigration. He organized an association for colonizing New South Wales in 1834 and founded a

similar society for New Zealand in 1837. **Wakefield**, county district in SE WEST YORKSHIRE, England; created in 1974 under the Local Government Act (1972). Area: 333sq km (129sq miles). Pop. (1979 est.) 309,700.

Wakefield Plays, cycle of MYSTERY plays performed by the workmen of WAKEFIELD and dating from c.1450. Apart from the *Second Shepherd's Play*, unique to the Wakefield text, the sequence enacts the traditional biblical events performed in contemporary cycles but employing a more earthy and humorous dialogue. A shortened adaptation of the plays has been frequently performed since 1967.

Waksman, Selman Abraham (1888-1973), US microbiologist, *b.* Russia. He was awarded the 1952 Nobel Prize in physiology and medicine for his discovery of STREPTOMYCIN in 1943. He developed techniques for extracting ANTIBIOTICS from various micro-organisms and discovered several new ones, including NEOMYCIN.

Walachia. See WALLACHIA.

Walcheren expedition (1809), British disaster in the NAPOLEONIC WARS. A fleet of about 100 ships with 40,000 men under the Earl of Chatham landed on the island of Walcheren in the Scheldt estuary in July, in an effort to divert French troops. The island was held but the French fleet escaped and the last of the British troops were withdrawn in Dec. 1809 after heavy losses from fever.

Walcott, Derek (1930-), West Indian playwright and poet. His first work was *Twenty-five Poems* (1948). Subsequent works include *In a Green Night* (1962) and *The Castaway* (1966).

Walcott, "Jersey Joe" (1914-), US boxer, *b.* Arnold Raymond Cream. He beat Ezzard Charles in 1951 for the world heavyweight title in Pittsburgh and lost it in 1952 to "Rocky" Marciano.

Wald, George (1906-), US biologist who shared the 1967 Nobel Prize in physiology and medicine with Haldan HARTLINE and Ragnar GRANIT for his research into the chemical processes of vision. He discovered that vitamin A is an essential component of visual pigments and later determined the chemical reactions which occur in the rods of the retina.

Waldemar, name of four kings of Denmark. **Waldemar I** (1131-82; *r.* 1157-82), known as "the Great", defeated Sweyn III in 1157 and became king, with his foster-brother Bishop Absalon as his adviser. **Waldemar II** (1170-1241; *r.* 1202-41), known as "the Victorious", was forced to relinquish territory by the German princes. He lost Estonia in 1227, but regained it in 1238. His son, **Waldemar III**, ruled jointly with him from 1218 to 1231. **Waldemar IV Atterdag** (c.1320-75; *r.* 1340-75), united the kingdom in 1361.

Waldenses, small Christian sect which had its origin in the "Poor Men of Lyons", as the followers of Peter WALDO of Lyons (*d.* c.1218) were called. Waldo translated the Bible into French and preached without ecclesiastical authorization which led to his excommunication (1184). The Waldenses renounced private property and led an ascetic life. They repudiated many Roman Catholic doctrines and practices such as INDULGENCES, PURGATORY and MASSES for the dead, and denied the validity of SACRAMENTS administered by unworthy priests. The movement flourished briefly in the 13th century, but active persecution extinguished it except in the French and Italian Alps. In the 16th century the remaining Waldenses made contact with the Protestant Reformers, who attended a synod convened by them in 1532 at Cianforan. The synod adopted a confession of faith which included the doctrine of PREDESTINATION. The Waldenses still exist as a small sect, and about 3,000 live in Valdesse, North Carolina, founded by members of the sect who emigrated to the USA during the 19th century.

Waldheim, Kurt (1918-), Austrian Foreign Minister between 1968 and 1970, diplomat, and Secretary-General of the United Nations Organization (1972-82). He headed Austria's first UN delegation in 1955 and was its representative (1964-

68; 1970-71). He was elected as successor to U THANT. See also p.1784.

Waldo, or Valdo, Peter (c.1140-c.1218), French religious reformer after whom the WALDENSES are named. He sent out disciples, known as Poor Men, to read to the common people from the Bible. The authorities forbade them to preach but Waldo persisted and came to oppose many teachings of the Church.

Waldorf, William, Viscount Astor. See ASTOR FAMILY.

Wales, Prince of. See PRINCE OF WALES.
Wales, principality of Great Britain, occupying a broad peninsula to the w of central Britain. The country is mountainous in the N and S; lowland areas are confined to the borders regions and coastal plains. The principal rivers are the Severn, Dee, Conway and Teifi. Much of the land is used for rough grazing although Wales' major contributions to the economy of the UK come from coal mining and iron and steel manufacture. The capital is Cardiff. Area: 20,761sq km (8,016sq miles). Pop. (1979 est.) 2,775,000. See p.2170.

Waley, Arthur Schloss (1889-1966), British poet and Oriental scholar, best known for his translations of Chinese verse. His collection of 170 Chinese Poems (1917) influenced such leading 20th-century poets as POUND and YEATS. His other translations include the 16th-century Chinese novel *Monkey* (1942), and Japanese works such as SKIKIBU MURASAKI's *Tale of Genji* (1925-32) and SEI SHONAGON's *Pillow Book* (1927). His work is noted for its combination of poetic imagination and meticulous scholarship.

Walesa, Lech, leader of the Polish 'free' trade union Solidarity, which gained considerable concessions - such as the right to strike - from the authorities. Its suppression and the internment of several of its leaders including Walesa, caused worldwide indignation in 1981.

Walker, Sir Emery (1851-1933), British process engraver and typographer. He helped William MORRIS to establish the KELMSCOTT PRESS (1890); with T. J. Cobden-Sanderson he founded the Doves Press (1900), which lasted until 1909.

Walker, John (1952-), New Zealand middle-distance runner. He achieved international reputation when he came second in Filbert BAY's record-breaking 1,500m run in the Commonwealth Games in Christchurch in 1974. In May 1975 he broke the world record for the mile, with a time of 3min 49.4sec.

Walker, Robert (d.c.1658), English painter, a follower of VAN DYCK, and best known for his portraits of John EVELYN (1648) and Oliver CROMWELL (1649).

Walker, William (1824-60), US military adventurer. His greatest success was in Nicaragua between 1855 and 1857, where he took advantage of a civil war to make himself president. He was ousted by a coalition of Central American states in 1857 and surrendered to the US navy. After three attempts to return to Nicaragua, he was arrested by the British navy and turned over to the Honduran authorities who executed him.

Walker Cup, biennial competition between teams of amateur male golfers from the USA and Britain. It was founded in 1922 by Cyril Walker, who donated the International Challenge Trophy. Eight 18-hole foursomes and 16 18-hole singles are played over two days.

Walking, in sport, rhythmic action defined by the British Race Walking Association as "a progression by steps so taken that unbroken contact with the ground is maintained". Under the International Amateur Athletic Federation rules, there must be a momentary straightening of the knee in every stride.

Wallabies, name given to Australia's national rugby union team, after the bush kangaroo indigenous to Australia. The Wallabies' first major tour was of Britain in 1908, when they won the rugby union gold medal at the Olympic Games.

Wallaby, any of various medium-sized members of the kangaroo family of marsupial mammals, occurring chiefly in Australia. All species are herbivorous, feeding in open grassland at night, and

using the scrubland vegetation for daytime resting. They move fast in a series of leaps, using both strong hind legs simultaneously, balanced by the tail. Length: head and body 45-105cm (18-41in); tail 33-75cm (13-30in). Family Macropodidae. See also KANGAROO.

Wallace, Alfred Russel (1823-1913), British naturalist and evolutionist, who developed a theory of NATURAL SELECTION independently of but at the same time as Charles DARWIN. He wrote *Contributions to the Theory of Natural Selection* (1870) which, with Darwin's *Origin of Species*, comprised the fundamental explanation and understanding of the theory of EVOLUTION. He gave his name to WALLACE'S LINE. See also pp.182-183, 187, 290, 294.

Wallace, Edgar (1875-1932), English novelist and playwright who produced 170 novels in 25 years. He published his first novel, *The Four Just Men*, in 1905 and went on to become a best-selling writer whose fast-moving and tightly plotted stories remain popular. His first stage success came with *The Ringer* in 1926 and he wrote the screenplay of the classic film *King Kong* (1933).

Wallace, George Corley (1919-), US politician. As Democratic governor of Alabama in 1962, he attempted unsuccessfully to block federal efforts to end racial segregation in Alabama state schools (1962-66). His first wife, Lurleen Wallace, succeeded him as governor in 1966 but he was re-elected in 1970 and 1974. In 1972, while campaigning for the Democratic presidential nomination, he was shot and severely wounded and has remained paralysed from the waist down.

Wallace, Lewis (1827-1905), US writer, diplomat and Civil War general. He is best known for his popular, romantic novel *Ben-Hur* (1880), a story of the Roman Empire and the rise of Christianity. Other works include *The Fair God* (1873) and *The Prince of India* (1893).

Wallace, Sir William (c.1270-1305), Scottish soldier. He led troops to victory over the English at Lanark and STIRLING BRIDGE in 1297 and carried out raids in the N of England. Defeated by EDWARD I's army at Falkirk in 1298, he fled to France to seek foreign aid. He returned to Scotland, was betrayed in 1305 and executed in London. See also pp.1317, 1317.

Wallace, William Vincent (1812-65), Irish composer who led an adventurous life, visiting Australia, India and South America. He became a violinist and a pianist. His opera *Martina* (1845) was performed in London with great success. See also p.1471.

Wallace's line, imaginary line dividing the islands Borneo and Bali from Celebes and Lombok. It was drawn by Alfred Russel WALLACE to demarcate animal populations which live close to each other and yet are extraordinarily different. Earlier this observation had influenced Wallace to state his theory of natural selection, which was coincident with that of Charles DARWIN. He argued that homogeneous animal populations could, for various reasons, divide and diversify gradually until they had evolved into separate species. See also p.294.

Wallach, Otto (1847-1931), German chemist who was awarded the 1910 Nobel Prize in chemistry for his research into TERPENES. In 1884 he began investigations into the essential oils in plants and, by a method of repeated DISTILLATION, he isolated the components of these complex compounds.

Wallachia, historic region in Romania; formerly the principality between the River Danube and the Transylvanian Alps. It is said to have been established in 1290 by Ralph the Black, vassal of the king of Hungary, from whom the region secured temporary independence in 1330.

However, it came gradually under the domination of the Turks, whose suzerainty was acknowledged in 1417. Wallachia and MOLDAVIA became protectorates of Russia under the Treaty of Adrianople (1829) and, by their union in 1859, formed the state of Romania. Wallachia is an important agricultural region, but has been developed industrially in recent

years. The Ploesti oil fields are located near Bucharest; other products include chemicals and heavy machinery. Area: 76,599sq km (29,575sq miles).

Wallenstein, Albrecht Eusebius Wenzel von (1583-1634), German general. He sided with the Holy Roman Empire when the THIRTY YEARS WAR broke out in 1618, and eventually became the commander of the imperial armies.

Waller, Fats (1904-43), US jazz and blues pianist and composer, real name Thomas Waller. He wrote many successful tunes, including *Honeysuckle Rose* and *Ain't Misbehavin'*, but owed his popular success to his ability to entertain audiences as a comedian as much as to his musical gifts.

Waller, Fred (1886-1954), US film director and inventor in 1928 of the ultra-wide film-screen process known as CINERAMA.

Wall-eye. See STRABISMUS.

Wallflower, any of several species of sweet-scented perennial plants that are commonly cultivated in Europe. The European wallflower, *Cheiranthus cheiri*, has lance-shaped leaves and red, orange, yellow, or purple flowers. Height: to 90cm (36in). Family Brassicaceae.

Wallis, Alfred (1855-1942), English PRIMITIVE painter. He was born in Devon and was almost illiterate; he worked as a fisherman in St Ives from 1892. In his seventies he began painting (1928) and continued to do so until his death in a workhouse. His favourite subjects were St Ives and the sea, which he painted with ship's paint, usually on bits of cardboard carton, often allowing the asymmetrical, casually torn shape of the card to dictate the picture's design.

Wallis, Sir Barnes Neville (1887-1979), British aeronautical engineer and inventor, best-known for his invention of the bouncing bomb during WWII. In the 1920s he designed the airship R100 and after the war the first swing-wing aircraft.

Wallis, Henry (1830-1916), British painter. Among his best works is *The Death of Chatterton* (1856), painted in the manner of the Pre-Raphaelites.

Wallis, John (1616-1703), English mathematician, who systemized the use of formulas and made a study of the quadrature of circles.

Wallis and Futuna, French island territory in the S Pacific Ocean, w of Samoa. The territory is made up of two small groups of volcanic islands, the Wallis Islands and the Hoorn Islands. The principal islands are Uvea, Futuna and Alofi, and the chief town is Matautu. Timber is the main export. The French took the islands in 1842 and they became an overseas territory in 1959. Pop. (1972 est.) 10,000.

Walloons, term for the French-speaking people of southern Belgium as opposed to the Flemish-speaking people of the north. They inhabit chiefly the provinces of Hainaut, Liège (the term originally meant the French dialect spoken there), Namur and southern Brabant. In the early 1970s they numbered about 3,000,000.

Wallpaper, paper wall coverings which first appeared in Europe in the 15th century as replacements for the more expensive cloth wall hangings.

Wall Street, road in lower Manhattan, New York City, which since the mid-19th century has been the centre for the great financial houses of the USA, exchanges, brokerage firms and private banks. It gets its name from the wall built on the site in 1653 to protect the Dutch settlement of New Amsterdam from English attacks.

Walnut, deciduous tree native to North and South America, Europe and Asia. Walnuts have smoother bark than HICKORY trees, to which they are related, and are grown for timber, ornament and nuts. Height: to 50m (165ft). Family Juglandaceae; genus *Juglans*. See also p.377.

Walpole, Horace, 4th Earl of Orford (1717-97), British man of letters who was an MP from 1741 to 1768. In 1747 he bought Strawberry Hill, near Twickenham, where in 1757 he established a printing press. His literary reputation rests upon his letters which provide invaluable pictures of Georgian Britain. See also pp.1478, 1546, 1547-1548.

Walpole, Sir Hugh Seymour (1884-

Wales; Caernavon Castle - the site of Prince Charles's investiture in 1969.

Wallaby; *Wallabia elegans* inhabits the coastal areas of Eastern Australia.

Fats Waller began playing the piano as a child; his style influenced many musicians.

Sir Barnes Wallis progressed from airship design to work on the supersonic Concorde.

Walpole, Sir Robert

Walrus use their tusks to lever clams from rocks and to haul themselves ashore.

Bruno Walter made his debut in the USA in 1923 and became resident there in 1939.

Wampum beads, made from sea shells, were used both as currency and ornaments.

Wankel rotary engines have few moving parts and are quieter than most engines.

1941), British novelist, b. New Zealand, who first achieved success with *Fortitude* (1913). His best-known works include *Mr Perrin and Mr Traill* (1911) and the historical *Herries* tetralogy, comprising *Rogue Herries* (1930), *Judith Paris* (1931), *The Fortress* (1932) and *Vanessa* (1933), which were published in 1942 as *The Herries Chronicle*.

Walpole, Sir Robert, 1st Earl of Orford (1676–1745), British statesman. He was a Whig member of Parliament (1701–42), led parliamentary opposition to the Tories, and became Chancellor of the Exchequer in 1715. Although he resigned in 1717 after developing the first sinking fund, he restored order after the SOUTH SEA BUBBLE in 1720. He returned as Chancellor of the Exchequer and First Lord of the Treasury (1721–42) and in that capacity was England's leading politician. His financial policies served to encourage trade, but he was forced to resign in 1742 through opposition to his pacific foreign policy. During his long tenure of office, the HANOVERIAN SUCCESSION became firmly established. He is considered to have been England's first Prime Minister. See also pp.1462, 1462, 1534–1535.

Walpurgisnacht (1 May), traditional witches' sabbath held in Germany on the eve of one of the feasts of St Walpurgis, or Walburga (d.779). The saint was an English missionary who founded a convent at Heidenheim. Her other feast is on 25 Feb.

Walras, Marie-Esprit-Léon (1834–1910), French economist. Much of the work of economic analysts is devoted to studying equilibrium in one particular market (eg the supply and demand conditions for wheat) but Walras was concerned with the interrelations among and between all markets. His method is mathematical in approach and abstract in structure.

Walrus, arctic seal-like mammal; it has a massive body and a large, round head. Its tusks, developed from upper canine teeth, may reach 1m (39in) in length and are used to rake up the sea-bed in search of molluscs. Length: to 3.7m (12ft). Family Otariidae; species *Odobenus rosmarus*. See also pp.98, 99, 322.

Walsall, county district in N West Midlands, England; created in 1974 under the Local Government Act (1972). Area: 106sq km (41sq miles). Pop. (1979 est.) 263,400.

Walsh, Don (1931–), US naval officer. He was the officer in charge of the bathyscaphe *Trieste*, which made a record dive to 10,906m (35,780ft) in Jan. 1960.

Walsingham, Sir Francis (c.1532–90), English statesman, Secretary of State (1573–90). He was employed on diplomatic missions and, at his own expense, set up an intelligence network. Through his efficient espionage system he revealed the Throckmorton plot and the BABBINGTON CONSPIRACY (1586). See also p.1408.

Walter, Bruno (1876–1962), German conductor, real name Bruno Walter Schlesinger. After a series of conducting posts in Europe, he went to the USA in 1939. From 1947 to 1962 he was primarily associated with the Metropolitan Opera, New York, and was conductor of the New York Philharmonic Orchestra (1947–49). He was best known for his interpretations of such German and Austrian composers as MOZART, BRAHMS and MAHLER.

Walter, Hubert (d.1205), English statesman and clergyman. After being named Bishop of Salisbury in 1189, he joined Richard I's Third Crusade and was made Archbishop of Canterbury and chief justiciar in 1193. He raised Richard's ransom money, suppressed Prince John's rebellion and virtually ruled England during the king's absence.

Walter, John (1739–1812), British coal merchant and journalist. He was the founder of *The Times* newspaper – originally called *The Daily Universal Register* (1785), but renamed *The Times* in 1788. He took out a patent in 1783 for printing from logotypes (whole words or several letters cast in one piece).

Walter, Lucy (c.1630–58), Welsh mistress of the future CHARLES II from

1648 to 1651. Charles was the father of her son James, Duke of Monmouth, born in 1649. She is also known as Mrs Barlow and is frequently (although incorrectly) called Walters or Waters.

Walter, Thomas Ustick (1804–87), US architect. He is best remembered for his extensions to the CAPITOL at Washington, DC. He also designed the interior of the LIBRARY OF CONGRESS. He was president of the American Institute of Architects from 1876 until his death.

Waltherius, epic 9th- or 10th-century poem about the Germanic hero Waltherius, written in Latin, possibly by the monk Ekkehard I the Elder (d.973).

Walther von der Vogelweide (c.1170–c.1230), German poet, considered the greatest MINNESINGER of the Middle Ages. He worked at the court of Duke Frederick I in Vienna until 1198, when Frederick died.

Walton, Ernest Thomas Sinton (1903–), British physicist who shared the 1951 Nobel Prize in physics with Sir John COCKROFT for the development of the first nuclear particle accelerator. After two unsuccessful attempts they finally succeeded in 1929, using a voltage multiplier to accelerate protons. In 1931, they produced the first artificial nuclear reaction without radioactive isotopes, using high-energy protons to bombard lithium nuclei. This process was of great importance for studying nuclear structure and its modern counterparts are among the most useful tools of NUCLEAR PHYSICS. See also pp.819, 847.

Walton, Izaak (1593–1683), English author and biographer. He is best known for *The Compleat Angler, or the Contemplative Man's Recreation*, which first appeared in 1653 and was frequently revised with the addition of new material. His biographies include *John Donne* (1640), *Sir Henry Wotton* (1651) and *George Herbert* (1670).

Walton, Sir William Turner (1902–), British composer who, using a largely conservative, post-romantic style, composed in practically every medium. His orchestral works, noted for their melodic structure, include *Portsmouth Point* (1926) and the comedy overture *Scapino* (1941). He wrote *Crown Imperial* (1937) and *Orb and Sceptre* (1953) as coronation marches for George VI and Elizabeth II. His most widely known works are the jazz-oriented *Façade* (1923), the oratorio *Belshazzar's Feast* (1931) and the opera *Troilus and Cressida* (1954). Later compositions include the *Missa Brevis* (1966) and *Sonata for String Orchestra* (1972). See also p.1754.

Waltz, dance performed by couples to music in triple time. This graceful ballroom dance came into fashion in the early 19th century, having developed in the previous century from South German folk dances, such as the Ländler.

Walvis Bay, inlet port and surrounding territory on the w coast of Namibia. Walvis Bay is the home port of several whaling and fishing fleets, and fish canning is an important local industry. Pop. (1970 est.) 23,460.

Walworth, Sir William (d.1385), English fishmonger and Lord Mayor of London in 1374 and 1381. He defended London Bridge against Kentish rebels during the PEASANTS' REVOLT of 1381 and killed the peasants' leader, Wat TYLER, at Smithfield. See also p.1349.

Wampum, or wampumpeag, beads used by N American Indians as ornaments and as a medium of exchange in early colonial trade. Wampum beads were usually made from shells and were coloured blue and white.

Wanamaker, Sam (1919–), US actor and director of films and theatrical productions. In the cinema, he appeared in *Taras Bulba* (1962) the *The Voyage of the Damned* (1975) and directed *The Executioner* (1970) and *Sinbad and the Eye of the Tiger* (1975). In the theatre, he was associated with the establishment and direction of the Shakespearean Globe Playhouse on Bankside, London, in 1970.

Wanderers, The, group of thirteen Russian painters who rejected academic

formulas in 1870 and attempted to paint realistic pictures of rural and peasant life. They organized their own exhibitions, which they took around Russia themselves. They included Ivan Kramskoy, Ilya REPIN and Vasily VERESHCHAGIN.

Wandering Jew, according to legend and popular literature, a Jew who abused Jesus Christ on His way to Calvary, and was condemned to wander the Earth until the SECOND COMING. Although the story first appeared in 13th-century literature, the wanderer was not identified as a Jew until the 17th century.

Wandering jew, or inch plant, creeping house-plant native to South America. Plants in the genus *Tradescantia* have green-and-white striped oval leaves. Those in the genus *Zebrina* have purplish-green leaves. Family Commelinaceae. See also p.381.

Wandiwash, Battle of (1760), victory of the British army over the French in the SEVEN YEARS WAR at Wandiwash, India, SW of Madras. The British army was led by Sir Eyre COOTE, the French by the Irishman Count Lally. Together with the capture of PONDICHERY in 1761 it secured for the British the control of the Carnatic, the SW region of India on the Arabian Sea which was the centre of the Anglo-French struggles for supremacy in India during the 18th century.

Wang An-shih (1021–86), Chinese statesman of the SUNG DYNASTY. To strengthen the central government he introduced administrative reforms such as cheap government credit.

Wang Ching-wei (1883–1944), Chinese political leader. He was a close associate of SUN YAT-SEN and was a leader of the KUOMINTANG. He eventually opposed the rule of CHIANG KAI-SHEK. Wang led the Japanese puppet regime in China from 1940 until his death.

Wangchuk, Jigme Singhe (1955–), King of Bhutan from 1972 (4th sovereign of the Wangchuk dynasty), crowned on 2 June 1974. The youngest reigning sovereign in the world at that time, he continued his father's policy of modernization and represented his country at the nonaligned nations' conference in 1976.

Wang Meng (c.1308–85), Chinese landscape painter of the YUAN DYNASTY. One of the great masters of the 14th century, he was renowned for the virtuosity and variety of his brushwork. See also p.1263.

Wang Pi (249–226 BC), one of the creators in China of Neo-TAOISM. A commentator on the Tao te Ching and the I Ching, he conceived Tao as "non-being" which he regarded as a universal and absolute metaphysical reality, and therefore not merely as the antithesis of being.

Wang Yang-ming (1472–1529), Chinese idealist philosopher and government official. He believed that general principles are to be found in the human mind, not through the study of physical objects, and that knowledge and action are identical. His teachings had a great and long-lasting influence on Oriental philosophy. See also pp.1886–1887.

Wankel rotary engine, most widely-used rotary engine. The rotor is an equal-sided triangular piece that rotates in an orbit within a specially constructed casing. Crescent-shaped combustion chambers, created by the rotor, increase and decrease in size as the rotor turns. At the appropriate time sparks ignite the fuel and air mixture (from a carburettor) in each chamber. See also p.421.

Wapentake, in Anglo-Saxon England administrative division of the shire equivalent to the HUNDRED, in those parts of the country where Danish influence was strong. Wapentakes were found especially in the Midlands and in Yorkshire.

Wapiti, large deer of North America, closely related to the Old World red deer, second only to the MOOSE in size. It is grey-brown with a whitish rump and dark, brown-black legs, head and neck; its antlers may reach a span of 1.5m (5ft). In the USA it is commonly known as an ELK. Height: to 1.5m (5ft); length: to 2.5m (7.5ft). Family Cervidae; species *Cervus canadensis*. See also p.305.

War and Peace (1865-72), epic novel by Leo Tolstoy. It is both an historical novel, describing the Napoleonic wars in Russia, and a family chronicle that examines the lives of several families, centering on the Rostovs.

Waratah, small shrubby flowering plant that grows in acid soils in near-desert conditions in New South Wales, Australia. It has slender oval alternate leaves and large dense clusters of red blooms up to 10cm (4in) in length. Genus *Telopea*. See also pp.308, 375.

Warbeck, Perkin (1474-99), Flemish pretender to the English throne. He travelled in Ireland and Europe (1491-93) professing to be Richard, Duke of York, son of Edward IV. He attempted to invade England three times (1495, 1496 and 1497), but despite Scottish support was finally captured and executed.

Warble fly, large, hairy, bee-like fly. It lays its eggs on the feet of animals such as cattle and deer. The larvae work their way through the skin into the animal's body, causing painful swellings, or warbles. Family Hypodermatidae, species *Hypoderma lineatum* and *H. bovis*.

Warbler, name applied to numerous birds of two families, one in the Old World (Sylviidae) and the other the New World (Parulidae). Most New World warblers generally have brighter plumage. See also pp.80, 187, 309.

Warburg, Otto Heinrich (1883-1970), German biochemist who was awarded the 1931 Nobel Prize in physiology and medicine for his discovery of respiratory enzymes. He made significant contributions to the understanding of the mechanisms of cellular respiration and energy transfer, and of photosynthesis.

War crimes, violations of international laws of war. The term came into use after WWII when certain German and Japanese leaders were held responsible for violating the laws of war and were tried by Allied military tribunals in Nuremberg and Tokyo (1945-47). In the Vietnam War, Lieut. William Calley was found guilty of war crimes for ordering a massacre of civilians at My Lai in 1968.

Ward, Barbara Mary, Baroness Jackson of Lodsworth (1914-), British economist and author. She taught at Harvard University (1957-68) and at Columbia University (1968-73). Her books include *Policy for the West* (1951), *The Rich Nations and the Poor Nations* (1962), and *Nationalism and Ideology* (1967). She became president of the Conservation Society in 1973, and was made a life peer in 1976.

Ward, Mrs Humphry (1851-1920), British novelist and philanthropist, real name Mary Augusta Arnold, b. Tasmania. She was the granddaughter of Thomas Arnold and wife of Thomas Humphry Ward. Her works include *Robert Elsmere* (1888) and *Bessie Costrell* (1895).

Ward, James (1769-1859), British painter and engraver. He was appointed "painter and mezzotint" to the Prince of Wales in 1794. His large landscape *Gordale Scar* (1815) shows his romantic feeling for grandiose aspects of nature.

Ward, James (1843-1925), British philosopher. He became a fellow of Trinity College Cambridge in 1875 and was professor of mental philosophy at the University from 1897 to 1925.

Ward, Sir Joseph George (1856-1930), New Zealand politician. As leader of the Liberal party he was twice Prime Minister (1906-12 and 1928-30). He introduced the penny postage in 1901 and state fire insurance in 1903. He represented New Zealand at the Imperial War Cabinets of 1917-18 and at the Paris peace conference of 1919.

Ward, Lester Frank (1841-1913), US sociologist. He developed a theory of progress for mankind whereby education and development of intellect could direct social evolution. His works include *Dynamic Sociology* (1883).

Warden of the Cinque Ports, English office dating from 1268, when Henry III gave to the constable of Dover Castle the

duty of administering the Cinque Ports. The warden was president of Shepway, the royal court established in 1150 as the court of appeal for the five ports. By the 15th century the warden had taken over admiralty jurisdiction over the ports. The office is now purely ceremonial.

Ward of Court, young person who is under the guardianship of a court because of his involvement in a lawsuit concerning property rights. The court's obligations include protection of its ward from financial loss.

Wardrobe, department of the royal household in medieval England. It replaced the exchequer, which had moved "out of court" as the financial department in the reign of Henry III. It exercised its greatest power in the reign of Edward I, when it looked after not merely the household finances but also the expenses of the king's armies.

Wards and Liveries, Court of, English court established by Henry VII and made into a formal court with its own seal by Henry VIII. It heard cases arising out of the Crown's enforcement of feudal dues, particularly the right of wardship. The court was abolished by the Long Parliament in 1646.

War game, artificial simulation of war, as a pastime or for military planning. As a pastime, war games are played on a table or a map, using model soldiers. In modern military planning, war games are played to assess the possibilities of tactical or strategic situations, and sophisticated equipment, including computers, is used.

Warhol, Andy (1930-), US painter, printmaker, and film-maker. A leader of the Pop Art movement, he produced prints of soup cans, packing cartons and faces of film stars. He was the centre of the New York avant-garde in the 1960s, and made a number of films in which the camera impassively observes the everyday life of the actors. See also pp.1761, 1763.

Wari. See **Huari**.

Warlock, Peter (1894-1930), pseudonym of Philip Heseltine, British composer and musical scholar. He was influenced by Debussy and Bernard van Dieren and is best known for his song cycle *The Curlew* (1924, based on a poem by W.B. Yeats) and the *Capriol Suite* for string orchestra (1927).

Warlords, regional military leaders in China, particularly in the late 19th and early 20th centuries. From 1912 to 1928 China was torn by rivalry among the warlords, whose struggles prevented growth and consolidation of national power and left China weak and powerless to resist the pressures of imperial Japan. The warlords were separately backed by some European powers and Japan.

Warner, Rex (1905-), British novelist, poet and a classical scholar noted for his translations from Greek and Latin. He was influenced by Franz Kafka and his early novels, which include *The Wild Goose Chase* (1937) and *The Aerodrome* (1941), are allegories concerned with the problems of power. He also wrote historical novels, among which are *The Young Caesar* (1958) and *Pericles the Athenian* (1963).

Warner Brothers, US film production company formed in 1923 by four brothers, Harry, Jack, Albert and Sam. The first company to introduce sound, they produced *The Jazz Singer* in 1927 and an all-dialogue film, *The Lights of New York*, in 1928. Later films included *My Fair Lady* (1964) and *Bonnie and Clyde* (1967). Warner Brothers were amalgamated with Columbia in 1972. See also pp.1683, 1752.

War of 1812 (1812-1815), conflict between the USA and Britain. Minor points of friction between the two countries, together with the view of some US politicians (known as the "War Hawks") that war with Britain would enable them to seize territory in Canada, led to the outbreak of hostilities. New England, which was economically dependent on trade with Britain, was not enthusiastic about the war. Early attempts by US forces to take Canada were soundly defeated. The small US navy enjoyed some success, but

by 1813 the powerful British navy had established an efficient blockade of the US coast. British raids had no long-term success, although one such raid burned Washington, the capital. Peace negotiations were opened at Ghent, Belgium, in 1814. Fifteen days after peace terms were signed, Andrew Jackson defeated a British army at New Orleans in Jan. 1815.

War Office. See **DEFENCE, MINISTRY OF**.

War of the Worlds, The (1898), science fiction novel by H. G. Wells. It depicts a Martian invasion of England, and the resultant panic and destruction. The Martians are finally overcome by bacteria in the Earth's atmosphere.

Warrant, legal document of three main kinds. It may be a writ conferring some title or authority upon a person, it may be a command delivered to an officer to arrest an offender, or it may be a citation or summons. See also **SEARCH WARRANT**.

Warrant officer, in the Royal Navy, rank between a rating and a commissioned officer; also known as Fleet Chief Petty Officer; in the British Army, rank between non-commissioned and commissioned officer; in the RAF, highest non-commissioned officer in ground trades.

Warren, Robert Penn (1905-), US poet and novelist. In his works he concentrates on Southern themes and characters that are usually related to real incidents. In *All The King's Men* (1946) the central character resembled a ruthless, well-known Southern politician. The book was awarded the 1947 Pulitzer Prize for literature. He won the prize again in 1958 for *Promises*, a book of poetry.

Warren Commission, US commission appointed in November 1963 by President Lyndon B. Johnson to investigate the assassination of President John F. Kennedy. It included US Chief Justice Earl Warren and various senators, congressmen and legal staff. Its conclusion, delivered in September 1964 after taking evidence from 552 witnesses, was that the assassination was a lone act by Lee Harvey Oswald, and not part of a conspiracy. This, however, has not been universally accepted.

Warrington, county district in central Cheshire, England; created in 1974 under the Local Government Act (1972). Area: 176sq km (68sq miles). Pop. (1979 est.) 168,200.

Warsaw (Warszawa), capital of Poland, on the River Vistula. The largest city in Poland, its first settlements date from the 11th century, after which it developed as a trade centre, and was made the country's capital in 1596. It was taken by Russia in 1813 and occupied by the Germans in both World Wars. The Warsaw Pact, a union of European Communist nations, was signed in the city in 1955. Warsaw has a fine Gothic cathedral and medieval castle. It is an important transport centre with large concentrations of heavy industry. Products include chemicals, textiles, electrical equipment, iron and steel. Pop. (1979) 1,572,000.

Warsaw, Grand Duchy of, French dependency, created in 1807 by Napoleon I out of land Prussia had received in the second and third partitions of Poland, with a constitution modelled on that of France. Polish soldiers who fought with Napoleon's army hoped for independence but after Napoleon's defeat in 1815 about a quarter of the area became the Grand Duchy of Poznan under Prussian control, and the rest became Congress Poland, an independent nation.

Warsaw Pact, popular name for the Eastern European Mutual Assistance Treaty, signed on 14 May 1955 by Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Romania and the USSR. It was intended to give the alliance of Communist bloc countries a more formal organization and to act as a counter to NATO, which in the previous year had admitted West Germany to membership. The member nations pledged themselves to mutual defensive aid and agreed to establish a joint armed command and a political consultative committee. Albania ceased to participate in its activities in 1961 and formally with-

War and Peace has over 500 characters and ranks among the greatest of novels.

Warblers are divided into two groups; *Sylvia communis* is an Old World species.

Andy Warhol is sometimes criticised for lowering artistic standards with his art.

Warsaw Pact delegates signing a declaration of member states in Prague.

Warsaw Uprising

Warships, such as this Viking longship, were used for fighting as well as trading.

Warthog is docile unless cornered or attacked; the tusks may exceed 0.5m (20in).

George Washington is proudly remembered by most Americans as the father of the USA.

Wasps build their nests from paper which they make by pulping wood with saliva.

drew in 1968 because of the conflict between China and the USSR.

Warsaw Uprising (Aug.-Oct. 1944), action during WWII in which the Polish underground, led by Gen. KOMOROWSKI, attacked the German occupation troops in Warsaw in an attempt to ensure the post-war authority of the government in exile. The breakthrough of Allied armies in France and the rapid approach of Russian forces to the outskirts of Warsaw encouraged the resistance soldiers, but the Soviet advance halted. The Poles fought valiantly for 63 days unaided before they were overwhelmed.

Warship, vessel built for combat at sea. The Egyptians had developed fast strong vessels whose main purpose was warfare by 3000 BC, but the Minoans were probably the first to build warships which were more than a variant on merchant vessels (c.2000 BC). From about 800 BC the Greeks were using war galleys such as TRIREMES. The efficiency of these ships was improved during the 4th century BC when heavy missile weapons were mounted in them. Galleys continued as the main warships of the Mediterranean until AD 1600. In N Europe, boats such as the Viking longships were used both for war and trading; medieval naval battles were fought by converted merchantmen. During the 15th and 16th centuries the adoption of cannon and new sailing techniques changed naval warfare. By the 18th century, European fleets were composed of specialized vessels, from the heavily armed SHIPS OF THE LINE to the lighter corvettes and frigates. In the 19th century, steam propulsion, rifled artillery and armour plating brought more changes. Fleets of huge BATTLESHIPS (DREADNOUGHTS) were built before WWI. In their turn these were superseded by SUBMARINES and AIRCRAFT CARRIERS, which were the most important ships of WWII. Since then, the destructive power of individual vessels has greatly increased, and many are now armed with nuclear weapons. See also pp.566-569.

Wars of the Roses. See ROSES, WARS OF THE. **Wart**, raised and well-defined small growth on the outermost surface of the skin, caused by a VIRUS. It is usually painless unless in a pressure area.

Warthog, wild, tusked pig native to Africa. It has a brownish-black skin with a crest of thin hair along the back. Height: about 76cm (2.5ft) at shoulder; weight: 90kg (200lb). Family Suidae; species *Phacochoerus aethiopicus*. See also p.299.

Warwick, John Dudley, Earl of. See NORTHUMBERLAND, JOHN DUDLEY, DUKE OF.

Warwick, Richard de Beauchamp, Earl of (1382-1439), English soldier; son of Thomas, Earl of Warwick. A supporter of Henry IV, he defeated Owain GLYNDWR and fought Sir Henry PERCY at Shrewsbury in 1403. He was appointed Captain of Calais in 1414 and fought for Henry V in France. He was tutor to Henry VI, and in 1437 became Lieutenant of France and Normandy. See also p.1377.

Warwick, Richard Neville, Earl of (1428-71), English politician and soldier, known as "the Kingmaker". During the Wars of the Roses he helped the Yorkists to victory at St Albans in 1455 and captured Henry VI at Northampton in 1460. Warwick was the real ruler of England from 1461 to 1464, in the first part of Edward IV's reign. Warwick gradually lost power, however, and in 1469 turned against Edward, whom he drove into exile in 1470. Edward returned in 1471 and Warwick was killed at the Battle of BARNET. See also pp.1376, 1377.

Warwick, Sir Robert Rich, 2nd Earl of (1587-1658), English naval commander and colonialist. He was given the patent to administer Massachusetts in 1628 and Connecticut in 1631. He was a leader of the Puritan opposition to CHARLES I and as Lord High Admiral (1643-45) secured the navy for the parliamentary side in the ENGLISH CIVIL WAR.

Warwick, Thomas de Beauchamp, Earl of (d. 1401), English politician. An important magnate, he was one of the governors of the young RICHARD II, but later opposed Richard and tried to curb his power

(1387). He was imprisoned and banished for alleged treason in 1397, but restored to his estates by Henry IV in 1399.

Warwick, county town and county district in WARWICKSHIRE, central England. The city, on the River Avon, has light industry, but it is best known for its 14th-century castle, which attracts many tourists. The county district was created in 1974 under the Local Government Act (1972). Area: 283sq km (109sq miles). Pop. (county district, 1979 est.) 116,000, (city, 1971 est.) 18,289.

Warwickshire, county in central England. The land is gently rolling, rising to the Cotswold Hills in the S, and is drained chiefly by the River Avon. Cereals are the principal crops and dairy cattle and sheep are raised. Coal is mined in the NE and there is some light industry near Leamington. The county town is Warwick. Area: 1,981sq km (765sq miles). Pop. 468,900.

Wash, The, shallow inlet of the North Sea in E England, between Lincolnshire and Norfolk. It receives the rivers Witham, Welland, Nene and Great Ouse. The Wash is shallow with many sandbars, but dredged channels lead to Boston and King's Lynn. Length: 24km (15 miles). Width: 19km (12 miles).

Washing machine, appliance that washes clothes and linen. The first manually operated machine was sold in 1832, and electrically powered machines appeared in 1914. See also p.601.

Washing soda. See SODIUM CARBONATE.

Washington, Booker T. (1856-1915), US educator, born a slave in Virginia. After emancipation he educated himself, then taught at a school for black children. In 1881 he founded Tuskegee Institute (Alabama) for the training of blacks as teachers, farmers, mechanics and tradesmen.

Washington, George (1732-99), first US president (1789-97). He was born into a wealthy Virginia family and trained as a surveyor. As a colonel in the Virginia Militia during the French and Indian Wars, he won a reputation as an astute military commander and was chosen to lead the poorly equipped, untrained Continental Army against the British in the War of American Independence. He retired to his estate after the victory but was called back to preside over the Federal Constitutional Convention (1787). When the new country's Constitution was adopted and ratified, Washington was elected President. See also pp.1540, 1540-1541.

Washington, state in NW USA, on the Pacific Ocean and the Canadian border. The W of the state is dominated by Puget Sound, an arm of the Pacific, and the Olympic Mts. The Cascade Range crosses the state from N to S, and to the E is the Columbia Plateau. The Columbia is the principal river. Washington is the leading US producer of apples, and wheat is also important. Among Washington's principal resources are its rivers. The Columbia is one of the world's best sources of hydroelectricity, and is also used for irrigation. Half the state is forested and mineral deposits include magnesium and aluminium ores. The principal industries are food processing, aircraft, missiles and spacecraft, fishing, wood products and tourism. Olympia is the state capital and Seattle is the largest city.

The Spanish discovered the mouth of the Columbia River in 1775. After Captain James COOK's visit in 1778, the fur trade began and traders established a fur trading post at the river's mouth in 1811. The boundary with Canada was fixed by treaty with Britain in 1846, and the Oregon Territory, which included Washington, was established in 1848. Washington Territory was created separately in 1853. Exploitation of its forests and fisheries attracted settlement. Washington was admitted to the Union in 1889. Area: 176,616sq km (68,191sq miles). Pop. (1980) 4,130,163. See also p.2161.

Washington, DC, capital of the USA, on the E bank of the Potomac River, covering the District of Columbia and extending into the neighbouring states of Maryland and

Virginia. In 1790 the site was chosen by President George WASHINGTON as the seat of government, and the city was planned by the French engineer Pierre Charles L'Enfant. Construction of the WHITE HOUSE began in 1793 and of the Capitol the following year. The first Congress was held in Washington in 1800 and Thomas JEFFERSON was the first President to be inaugurated there (1801). During the WAR OF 1812, the city was occupied by the British and many public buildings were burned (1814), including the White House and the Capitol. Other landmarks include the Washington Monument (1848), Lincoln Memorial (1922), the Jefferson Memorial (1943) and the National Archives. Washington is the Legislative, judicial and administrative centre of the USA. Its governmental buildings include the Library of Congress, the PENTAGON, the SUPREME COURT, SENATE and HOUSE OF REPRESENTATIVES and Constitution Hall. Cultural centres include the National Gallery of Art, SMITHSONIAN INSTITUTION and the John F. Kennedy Center for the Performing Arts. There are several universities and institutions of scientific research in the city. There is little industry apart from tourism: the city attracts millions of tourists each year. Pop. (1980) 635,185. See p.1944.

Washington, Treaty of (1871), agreement between the USA and Britain to submit outstanding disputes to an international arbitration commission. The disputes involved included the ALABAMA CASE, the rights of US fishermen in Canadian waters and the boundary between British Columbia and the state of Washington.

Wasp, any insect of the stinging HYMENOPTERA that is neither a bee nor an ant. The common wasp (*Vespa vulgaris*) has four wings and a yellow body ringed with black. Adults feed on nectar, tree sap and fruit. Length: to 3cm (1.2in). Family Vespidae. See also pp.9, 9, 37, 43, 46, 304, 306, 307.

Wasps, The, comedy by ARISTOPHANES produced in 422 BC. It satirizes the Athenian jury system. Philocleon defends it, Bdelycleon attacks it. The wasps of the title are a chorus of jurymen disguised as wasps who rescue Philocleon so that he may attend the court.

Wasserman, August von (1866-1925), German bacteriologist. He made important contributions to immunology, the best-known of which was his development of a diagnostic test for SYPHILIS, the Wasserman test, still used today.

Wasserman, Jakob (1873-1934), German novelist who became famous for *Christian Wahnschaffe* (1919, tr. *The World's Illusion*, 1920), in which he urged a return to the selflessness of early Christianity. His other novels include *Caspar Hauser* (1909).

Waste, radioactive, residues, generally from nuclear reactors, containing radioactive substances. After uranium, plutonium and other useful fission products have been removed, some long-lived RADIOACTIVE ELEMENTS remain, such as caesium-137 and strontium-90. International regulations exist for disposing of such wastes, separate regulations applying to liquids, gases and solids.

Waste disposal. See REFUSE DISPOSAL.

Waste Land, The (1922), poem by T. S. ELIOT. In a series of vignettes it attempts to portray the disillusionment and moral disgust of the post-WWI generation with the barrenness and corruption of modern civilization. In it Eliot combined a wealth of literary and mythological allusion with an original and rich use of language. It had immense influence on poets of the day. See also p.1773.

Watch, small, portable timepiece usually worn on the wrist. See also MM pp92-93.

Watch and ward, system by which a community in England was made responsible for ensuring its own safety. HENRY III issued writs of watch and ward (the first in 1233) requiring that guards be appointed in each township. The system was made permanent by the Statute of WINCHESTER (1285). The statute was repealed in 1827.

Water, odourless, colourless liquid that covers about 70% of the Earth's surface

and is the most widely used solvent. It is a compound of hydrogen and oxygen (H_2O) with the two H-O links of the molecule forming an angle of 105° . This asymmetry results in polar properties and a force of attraction (hydrogen bond) between opposite ends of neighbouring water molecules. These forces maintain the substance as a liquid, in spite of its low molecular weight, and account for its unusual property of having its maximum density at $4^\circ C$. Properties: s.g. ($4^\circ C$) 1.000; m.p. $0^\circ C$ ($32^\circ F$); b.p. $100^\circ C$ ($212^\circ F$).

Water, heavy. See HEAVY WATER.

Water Babies, The (1863), children's book by Charles KINGSLEY. It is a fantasy account of the underwater adventures of a little chimney sweep who falls into a river and is transformed into a "water baby".

Water beetle, aquatic beetle, especially the predaceous DIVING BEETLE (family Dytiscidae), the water scavenger beetle (family Hydrophilidae) or the whirligig beetle (family Gyrinidae).

Water boatman, large-eyed aquatic insect found worldwide. Its body is grey to black, oval and flat, with fringed, oarlike hind legs. It feeds on ALGAE and micro-organisms in ponds and streams and is an important fish food. Length: about 15mm (0.6in). Order HEMIPTERA.

Waterbuck, or **waterbok**, large, gregarious, coarse-haired ANTELOPE, native to Africa south of the Sahara, and the Nile Valley. There are six species. Long, ringed horns on males slope backwards, then curve forwards at the tips. Length: 1.4-2.1m (4.5-7ft); height: 1.1-1.5m (3.6-4.9ft) at the shoulder. Family Bovidae; genus *Kobus*. See also p.298.

Water buffalo, or **carabao**, large ox, widely domesticated in much of the tropical world; it is feral in some parts of India. Height: to 1.8m (6ft) at the shoulder. Family Bovidae; species *Bubalus bubalis*. See also p.95.

Water chestnut, floating, aquatic plant found in Asia, Europe and Africa. It has diamond-shaped leaves and edible, spiny, chestnut-like fruit. Family Trapaceae. Species *Trapa natans*. The water chestnut of Chinese cookery is the succulent core of a Chinese sedge, *Eleocharis tuberosus*. Family Cyperaceae. See also p.687.

Watercolour, in art, paint that is made from a colour pigment ground up with a water-soluble gum, such as gum arabic; the term also refers to a painting that is rendered in this medium. The use of transparent paint may be traced to the paintings of ancient Egypt, China and Japan. In Europe, from the 15th century, artists such as DÜRER, and later REMBRANDT and CLAUDE LORRAIN (both of whose watercolour paintings were commonly executed in monochrome) explored the technique. In the late 18th and 19th centuries a freer, bolder use of the medium was made by COZENS, GIRTIN and COTMAN, all of whom helped to establish the English tradition. The work of TURNER was possibly the most adventurous in that he departed from the strictly classical tradition in his use of such techniques as sponging, wiping or scraping the paint to achieve a greater range of highlights.

Watercress, floating or creeping plant found in running or spring waters. The succulent leaves, divided into small, oval leaflets, have a pungent flavour and are used in salads and soups. The clustered flowers are white. Height: 25.4cm (10in). Family Brassicaceae; species *Nasturtium officinale*. See also pp.686, 686-687.

Water cycle. See HYDROLOGIC CYCLE.

Waterfall, point in the course of a river at which the water drops perpendicularly. The site of a waterfall usually indicates an outcrop of rock that is particularly resistant to erosion. See also p.221.

Water flea, any of numerous species of small, chiefly freshwater branchiopod CRUSTACEANS, especially those within the genus *Daphnia*, which are common throughout the world. Order Cladocera. See also DAPHNIA; pp.30, 35, 328-329.

Waterford, county in s Republic of Ireland, in Munster province, on the Atlantic Ocean. It is a mountainous region, drained chiefly by the rivers Blackwater

and Suir. The raising of beef and dairy cattle and sheep is the chief agricultural activity. Industries include fishing, food processing, tanning and glassware. Waterford is the county town and an important port serving the whole of s Ireland. Area of county: 1,838sq km (710sq miles). Pop. (1979) 87,000.

Waterford glass, Irish glass first made in the late 18th century. A glass-house existed in Waterford until 1851, making crystal glass with a high lead content (34%). Production recommenced in 1951. The glass is traditionally decorated with deeply cut diamond designs.

Waterfowl, birds, including DUCKS, GEESE and SWANS, found throughout most of the world. Large flocks migrate from cool nesting grounds to warm winter homes. All have short bills, short legs, and dense plumage overlaid by down. Undomesticated species are known as wildfowl in Britain. Order Anseriformes.

Watergate Scandal (1972-74), US political scandal involving the NIXON administration. It arose from an attempted burglary of the DEMOCRATIC PARTY's national offices by persons working for President Nixon's re-election committee. The administration's efforts to hide the connection provoked investigations by the SENATE and Justice Department which ultimately implicated the President. Impeachment proceedings against him were begun in 1973. In August 1974, after being ordered by a SUPREME COURT ruling to relinquish tape recordings that attested to his involvement in the affair, Nixon resigned. Although Nixon was pardoned by his successor, Gerald FORD, other members of the administration were prosecuted and convicted.

Waterhouse, Alfred (1830-1905), British architect. Among his most important works are Manchester Town Hall (1868-77), Balliol College, Oxford (1867-69), and the Natural History Museum, London (1868-80).

Water hyacinth, aquatic herb family, native to tropical America. It has swollen petioles that float in water, and spikes of violet flowers. Family Pontederiaceae; species *Eichhornia crassipes*.

Waterlily, any of about 90 species of freshwater plants widely distributed in temperate and tropical regions. They have thick perennial rootstocks and showy flowers of white, pink, red, blue or yellow. Family Nymphaeaceae; genera *Nymphaea*, *Nuphar*, *Nelumbo* and *Victoria*.

Waterloo, Battle of, final engagement of the NAPOLEONIC WARS, fought on 18 June 1815. NAPOLEON I led a French army of 72,000 strong in an attack on 68,000 men under the Duke of WELLINGTON, who held positions along Mont St Jean near the village of Waterloo, Belgium. French victory would have been certain but for the arrival of Wellington's allies, the Prussians under BLÜCHER, on the French right. There were eventually 45,000 Prussians engaged. From midday until 8 pm, Wellington's army held out until the French were routed. There were 23,000 allied casualties and the French lost 33,000 men. The battle resulted in the final abdication and exile of Napoleon. See also pp.1553, 1553, 1555, 1555.

Waterloo Cup, chief hare COURSEING event in Britain. First contested in 1836, it takes place in Lancashire over three days each February.

Waterman, Lewis Edson (1837-1901), US inventor. He is remembered chiefly for his production and manufacture of the first modern fountain pen in 1884. See also p.598.

Watermark, translucent impression made in otherwise opaque paper, either by machine or by hand. It is formed during the making of paper by a raised design on wires over which the paper is passed while still in a pulpy state. Watermarks have been used since the latter part of the 13th century as a guarantee of authenticity, as in banknotes, and to identify the makers of high-quality papers. See also pp.594, 594-595.

Watermelon, trailing annual VINE native to tropical Africa and Asia and cultivated in warm areas worldwide. Its fruit has a

hard, greenish rind, sweet, red, juicy flesh and many seeds. Family Cucurbitaceae; species *Citrullus lanatus*. See also GOURD.

Water mill, machinery powered by the flow of water past a waterwheel, used in early times to mill food grains. Waterwheel. See also pp.428, 428.

Water moccasin, or **cottonmouth**, venomous semi-aquatic SNAKE of SE USA. It is a PIT VIPER, closely related to the COPPERHEADS. It vibrates its tail and holds its white mouth open when excited. Length: to 1.2m (4ft). Family Viperidae; species *Ancistrodon piscivorus*.

Water of crystallization, definite molecular proportion of water that is chemically combined with certain substances in the crystalline state. Much of this water will be lost on heating to about $100^\circ C$ ($212^\circ F$) but some, the water of constitution, will be retained to a much higher temperature.

Cupric sulphate ($CuSO_4 \cdot 5H_2O$), loses four molecules of water at $100^\circ C$ becoming $CuSO_4 \cdot H_2O$.

Water Newton Treasure, hoard of Roman Christian silverware discovered in 1975 at Water Newton, Huntingdonshire, within the site of the Roman town Durobrivae. It is the earliest such silver found anywhere in the Roman Empire. It was declared treasure trove and acquired by the British Museum in 1975. See also MILDENHALL.

Water plantain, aquatic perennial plant of temperate freshwater swamps and streams. It has large, heart-shaped leaves that float or extend out of the water and small white or pinkish flowers. Family Alismataceae. See also ARROWHEAD.

Water pollution. See POLLUTION.

Water polo, swimming sport that employs features of BASKETBALL and FOOTBALL. It is played by two teams of seven people in a pool 20-30m (66-99ft) long and a maximum of 20 (66ft) wide. At each end of the pool is a net-enclosed goal, which one of the players defends. The game originated in Britain in 1870 and was introduced into the USA. It has been an Olympic event since 1900.

Water power, energy derived from flowing or falling water. It was first used to power grain mills. Today water is the source of hydroelectric power, in which it is used to turn huge electric turbine generators. Associated with these are large DAMS which store the water in deep reservoirs. See also pp.428-429, 428-429.

Waterproofing, rendering materials such as fabrics, leather and wood impervious to water by the application of substances such as rubber, synthetic resins, waxes or metallic compounds.

Water scorpion, any of numerous species of freshwater insects, found throughout the world. It has a long breathing tube at the end of the body and front legs modified for grasping, giving it a scorpion-like appearance. Some species can inflict a painful bite. See also p.45.

Watershed, a term signifying the line, ridge or summit of high ground separating two drainage basins. Watershed lines were often used as boundary lines.

Water skiing, sport in which a skier rides on the surface of the water while being towed by a motor-driven boat; it originated in France in the 1920s. Competition skiing usually includes three events - slalom, jumping and trick riding. In the slalom, skiers are towed through a series of staggered buoys which must be negotiated at high speed. In jumping, the skiers must ski over an inclined wooden ramp 1.8m (6ft) high and 6.1-6.7m (20-22ft) long. Trick riding has no set pattern, the skiers choosing their own intricate routines. Sometimes only one ski is used.

Water snail, also called pond snail, any of numerous species of SNAILS that live in fresh water. Most are more lightly built than terrestrial forms. Families include Lymnaeidae, Planorbidae and Physidae. See also pp.21, 328-329.

Water softener, substance added to water to reduce its hardness, ie its inability to form a lather with soap as a result of the presence of dissolved calcium and magnesium compounds. Some hardness, mostly due to the bicarbonates of these metals, can be removed by boiling. The remaining "permanent" hardness is mostly due to

Water beetle paddles itself along with its fringed hind legs, which act as oars.

Waterbucks live near lakes and streams; *Kobus ellipsiprymnus* is a fine swimmer.

Watergate prosecutor Leon Jaworski speaking to reporters during the trials of 1974.

Water skiing relies on the speed of the tow boat and the foil shape of the skis.

Waterspout

James Watson's work on DNA and RNA has advanced the science of genetics.

James Watt, even as a young man, was interested in steam as a motive force.

Watteau's *Love Disarmed* is an example of the influence that Rubens had on his work.

George Frederick Watts's study of George Meredith, an eminent contemporary of his.

sulphates of the metals and is reduced by adding such compounds as sodium carbonate, sodium phosphate or zeolites (hydrated silicates of calcium and aluminium) to remove or sequester the metallic ions.

Waterspout, column of water formed by a TORNADO travelling over water. The tornado draws the water up inside it, and waterspouts have been known to cause great damage to shipping and coastal installations. They usually occur in tropical regions.

Water supply, method of providing water to homes, farms and factories. It is of two types - treated and untreated. Only water which has been treated to remove all organic matter and bacteria is supplied to domestic consumers, although they can supply themselves with water from a well, butt or other catchment tank. Untreated water pumped straight from rivers, lakes and reservoirs is supplied for industrial processes. On-site water treatment may be necessary, however, as in the water-softening plants which supply boilers. See also pp.542-543.

Water table, in geology, surface between an upper level, the zone of aeration, and a lower level, the zone of saturation. In the zone of aeration the open spaces are filled mainly with air. In the zone of saturation, a sub-surface level, the openings are filled with water. See also pp.216-217.

Water vapour, water in its gaseous state. It occurs in the atmosphere and determines humidity and the formation of clouds as it condenses. Most of the atmosphere's water vapour is found in the TROPOSPHERE, mainly below an altitude of 8km (5 miles). Water vapour absorbs infra-red (long-wave) radiation and holds it in the atmosphere, because of the GREENHOUSE EFFECT, and thus plays a vital role in the transfer of energy and the Earth's heat balance. See also p.246.

Waterways, inland, passages of water that include rivers, interconnected systems of lakes, canals, and inland seaways, all of which are wide enough to carry ships and boats for transport. CANAL systems were much used for this purpose in Britain until the present century, when they have largely fallen into disuse. The ST LAWRENCE SEAWAY is the largest man-made inland waterway, making the Great Lakes of the USA and Canada accessible to large ships. See also pp.538-539.

Water wheel, mechanical device used since early Roman times to supply power, mainly for grinding cereals. The first water wheels were laid horizontally in flowing water, their shafts pointing upwards and surmounted by a millstone. Later water wheels were vertical, either undershot (in which the water passed under the wheel) or overshot (in which the water was directed by a sluice on to the top of the wheel). The latter had the advantage of being operable almost independently of the level of water in the stream or river that supplied it. See also p.428.

Watkins, David (1942-), Welsh rugby player. A fly-half with Newport, he won 21 caps for Wales (1963-67) and toured New Zealand with the 1966 British Lions. Playing rugby league for Salford, he won six caps for Great Britain and captained Wales.

Watling Street, Roman road, part of which in the 9th century formed the boundary between English and Danish land. It ran from Dover, via Canterbury, London, St Albans and Wroxeter to Chester. The name is from the Old English *Waelingstraet*, meaning the way to *Waeling-gaceaster* (St Albans). See also p.1235.

Wat's Dyke, great dyke built in England in c. 700 to defend Mercia against attacks by Welsh raiders. It stretched almost unbroken from the River Severn at about Shrewsbury to the Dee estuary. It was superseded as the Welsh boundary by OFFA'S DYKE, built about a century later. See also p.1319.

Watson, James Dewey (1928-), US geneticist and biophysicist. He is known for his role in the discovery of the molecular structure of deoxyribonucleic acid (DNA) and shared the 1962 Nobel Prize in

physiology and medicine with Francis CRICK and Maurice WILKINS. Watson later helped to break the genetic code of the DNA base sequences and found the ribonucleic acid (RNA) messenger that transfers the DNA code to the cell's protein-forming structures. See also p.389.

Watson, John Broadus (1878-1958), US psychologist, the founder of behaviourism in the USA. In the early 1900s he rejected mentalism and introspection and advocated a purely objective psychology that would be concerned solely with observable behaviour. His work did much to make psychological research more objective and rigorous, and his point of view was continued in the work of B. F. SKINNER. See also pp.1130.

Watson-Watt, Sir Robert Alexander (1892-1973), British physicist. As scientific adviser to the Air Ministry in 1940, he was a major influence in the rapid development of RADAR.

Watson-Wentworth, Charles, 2nd Marquess of Rockingham. See ROCKINGHAM, CHARLES WATSON-WENTWORTH.

Watt, James (1736-1819), British engineer. He invented the modern condensing steam engine in 1765. In 1782 he invented the double-acting engine. With Matthew BOULTON he founded the Soho Engineering Works at Birmingham in 1775 for the manufacture of steam engines. He and Boulton coined the term "horsepower" and the unit of power called a WATT is named after him. See also pp.388, 423.

Watt, unit of power in the metre-kilogramme-second (mks) system of units. A machine consuming one JOULE of energy per second has a power output of one watt. One horsepower corresponds to 746 watts. A watt is also a unit of electrical power, equal to the product of voltage and current. For example, an electric fire that uses 12 amps at 250 volts has a power of 3,000 watts (or 3 kilowatts).

Watteau, Jean Antoine (1684-1721), Flemish-born French painter, regarded as one of the major 18th-century French masters. Watteau worked in two styles. The first, influenced by the Flemish genre painter David TENIERS, is represented by the simple realism of his early painting *La Marmotte*. The second is the highly sophisticated style known as FÊTE GALANTE, is characterized in his masterpiece *Departure for the Islands of Cythera* (1717), an early full flowering of the spirit of ROCOCO. He died from consumption in 1721. See also pp.1480-1481, 1480-1481.

Wattle, pendulous, fleshy, often brightly coloured fold of skin that hangs at the neck of certain birds or lizards. The term also refers to any of several Australian trees of the genus *Acacia*.

Wattle and daub, ancient method of building, in which mud or clay (daub) is plastered on to wooden laths or branches (wattle) to form walls. The technique was used by itself, or to fill in spaces such as those of a half-timbered house.

Watts, George Frederick (1817-1904), British painter and sculptor whose works, based on CLASSICAL and RENAISSANCE models, were intended to convey moral precepts through their nobility of line and colour.

Watts, Isaac (1674-1748), British clergyman and author, considered the creator of the modern British hymn. He is remembered for his *Divine and Moral Songs for Children* (1720) and his hymns, notably *When I Survey the Wondrous Cross* and *O God, Our Help in Ages Past*.

Watt's governor. See FLY-BALL GOVERNOR.

Waugh, Evelyn Arthur St John (1903-66), British novelist, considered the greatest satirist of his generation. He began his career with a group of humorous novels, satirizing 20th-century life. These include *Decline and Fall* (1928) and *Vile Bodies* (1930). His belief in Roman Catholicism is strongly expressed in *Brideshead Revisited* (1945). He also wrote the Crouchback trilogy concerning WWII and comprising *Men at Arms* (1952), *Officers and Gentlemen* (1955) and *Unconditional Surrender* (1961).

Wave, in oceanography, moving disturbance travelling on or through water but

which does not move the water itself. Wind causes waves by frictional drag. Waves not under pressure from strong winds are called swells. Waves begin to break on shore or "feel bottom" when they reach a depth shallower than half the wave's length. When the water depth is about 1.3 times the wave height, the wave front is so steep that the top falls over and the wave breaks. See also pp.236-237, 236-237.

Wave, seismic. See SEISMIC WAVE.

Wave, tidal. See TIDAL WAVE.

Wave amplitude, greatest value of a periodically varying quantity. This peak value may be either positive or negative, as the quantity varies either above or below its zero value (maximum or minimum). Examples include the amplitude of an alternating current and the amplitude of a radio wave.

Wave diffraction. See DIFFRACTION.

Wave dispersion, variation of the REFRACTIVE INDEX of a medium with wavelength. It occurs with all electromagnetic waves but is most obvious at visible wavelengths, causing light to be separated into its component colours. This can be achieved by passing a light beam through a refracting medium, such as a glass prism, to form a SPECTRUM. Every spectral colour has a different wavelength, and so the prism refracts each colour present in the light by a different amount, red (long wavelength) being bent less than violet (short wavelength). The effect is present, but unwanted, in lenses, in which dispersion can cause chromatic aberration. See also p.854.

Wave frequency (symbol ν or f), number of complete oscillations or wave cycles in unit time of a vibrating system, measured in hertz. For a wave it is given by wave velocity divided by wavelength. By QUANTUM THEORY the frequency of any ELECTROMAGNETIC RADIATION (such as light, radio waves and X-rays) is proportional to the energy of the component photons. Many of the characteristics of electromagnetic radiation depend on frequency.

Wave function, in QUANTUM MECHANICS, function which represents the probability of a quantum system being in a particular state s at time t , usually written $\psi(s)$ or $\Psi(s, t)$.

Waveguide, system generally consisting of hollow metal tubes, used to carry and control ultra high frequency radio waves. Many RADAR sets, for instance, employ waveguides to carry their MICROWAVE signals.

Wavelength, distance between successive points of equal phase of a wave. For example, the wavelength of water waves could be measured as the distance from crest to crest. It is symbolized by λ (the Greek letter lambda) and equal to the wave velocity divided by the wave frequency.

Wavell, Archibald Percival Wavell, 1st Earl (1883-1950), British field-marshal. As Commander-in-Chief for the Middle East in 1939 he defeated the Italians in N and E Africa (1940-41) but was forced back by the Germans under Field-Marshal Rommel in 1941. He subsequently commanded forces in South-East Asia but lost Malaya, Singapore and Burma to the Japanese (1941-42). He was Viceroy and Governor-General of India between 1943 and 1947.

Wave mechanics, early form of QUANTUM MECHANICS developed in 1926 by ERWIN SCHRÖDINGER in which the behaviour of electrons is explained solely in terms of their wave properties. Although quickly superseded by a more abstract formulation by Paul Dirac, it is still widely used in calculations.

Waveney, county district in NE SUFFOLK, England; created in 1974 under the Local Government Act (1972). Area: 371sq km (143sq miles). Pop. (1979 est.) 97,700.

Waverley, county district in SW SURREY, England; created in 1974 under the Local Government Act (1972). Area: 345sq km (133sq miles). Pop. (1979 est.) 108,200.

Waverley, first novel by Sir Walter Scott, published anonymously in 1814. It is also the collective name (the "Waverley novels") for a long series of his works,

including *Old Mortality* (1816), *Quentin Durward* (1823) and *Redgauntlet* (1824). **Waves**, vibrating disturbances, either continuous or transient, by which energy is transmitted through media at velocities dependent on the type of wave and on the medium. **ELECTROMAGNETIC WAVES**, such as light, consist of varying magnetic and electric fields vibrating at right-angles to each other and to the direction of motion; they are transverse waves. Sound waves are transmitted by the vibrations of the particles of the medium itself, the vibrations being in the direction of wave motion; they are longitudinal waves. Sound waves, unlike electromagnetic waves, cannot travel through a vacuum and cannot undergo **POLARIZATION**. Both types of waves can be reflected, refracted, and give rise to **INTERFERENCE** phenomena. A wave is characterized by its **WAVELENGTH** or frequency, the velocity of wave motion being the product of wavelength and frequency. The velocity of electromagnetic waves greatly exceeds that of sound. See also **WAVE AMPLITUDE**; **WAVE FREQUENCY**; pp.832, 854.

Waves, The (1931), novel by Virginia Woolf. It has little narrative and no dialogue and is an extension of Woolf's experiments in the "stream of consciousness" technique.

Wax, solid insoluble substance of low melting point. Wax has three forms: animal and vegetable waxes are simple **LIPIDS** consisting of **ESTERS** of the higher fatty acids with monohydric alcohols; examples are beeswax and spermaceti (both animal), carnauba and candelilla (both vegetable). Mineral waxes, such as paraffin wax and montan, are esters of the higher **HYDROCARBONS**. Synthetic waxes are of diverse origins and include **POLYETHYLENES** and chloronaphthalenes. All types of waxes are used in the manufacture of lubricants, polishes, cosmetics, candles, and so on. Sealing wax is not a wax but is generally made from shellac.

Wax palm, also called carnauba palm, tree that grows in South America. The trunk and the underside of the leaves are covered with a waxy film and waxes prepared from this coating are used in the manufacture of polishes and candles. Family *Arecaceae*; species *Ceroxylon andicola*.

Waxwing, any of a few species of small, grey-brown birds with distinctive black markings on the head, a small crest and characteristic red or red-and-yellow waxy tips on the secondary wing feathers. They are found in the forests of Eurasia and North America and feed primarily on berries and fruit. Length: to 20cm (8in). Family *Bombycillidae*; genus *Bombycilla*.

Wayfaring tree. See **VIBURNUM**.

Wayland the Smith, in English folklore, an expert blacksmith and armourer. As *Völund* in Norse tradition, he exacted a terrible vengeance on the Swedish King Nidud, who seized him from the elves and made him a slave.

Wayne, John (1907-79), US film actor, b. Marion Michael Morrison. His first major success was in *Stagecoach*, directed in 1939 by John Ford. He made many films, usually appearing as the archetypal Western hero. These included *She Wore a Yellow Ribbon* (1949), *The Man Who Shot Liberty Valance* (1962), *True Grit* (1969) and *The Shootist* (1976).

Way of All Flesh, The (1903), largely autobiographical satirical novel by Samuel Butler about four generations of the Pontifex family. It exposes, with irony and wit, Victorian religious hypocrisy. Ernest rebels against his father, suffers imprisonment and marries a drunkard.

Way of the World, The (1700), comedy by William Congreve, a masterpiece of Restoration drama. It deals with the relationship between the lovers, Millamant and Mirabell, and Lady Wishfort, Millamant's aunt who opposes her marriage.

Waziristan, mountainous region in NW Pakistan, controlled from the Dera Ismail Khan division as N Waziristan and S Waziristan; it lies between the Kurram and Gumal rivers. The Waziris are a primitive people with a reputation for banditry, and a number of wars were fought

with the British in the 19th and 20th centuries. Its industries include weaving and growing rice, wheat and barley. Area: 11,326sq km (4,373sq miles). Pop. (1972 est.) 360,000.

Weak interaction, one of the four basic forces in physics, it can be observed only in the sub-atomic realm, being of very short range. It is weaker than the electromagnetic force and the strong interaction (the strongest of the forces) but is stronger than the gravitational force.

Weald, The, wooded area of SE England. It is the tract of land that lies between the South Downs and the North Downs, principally in Kent, but stretching through Sussex and Surrey as far as Hampshire. The top of the Weald strata is formed of clay, limestone and sandstone and is rich in fossil remains.

Wealden, county district in central EAST SUSSEX, England; created in 1974 under the Local Government Act (1972). Area: 837sq km (323sq miles). Pop. (1979 est.) 116,700.

Wealden, series of strata of the Lower Cretaceous period, about 130 million years old, underlying parts of SE England and NE France. They consist of beds of clay and sandstone laid down when the area was an inland sea bordered by river deltas.

Wealth of Nations, The, tract by Adam Smith arguing that the true wealth of a country resides in its labour.

Weapons, instruments of offence or defence. They may be ranged under two heads, shock weapons, which are held in the hands, and missile weapons, which are projected. The first weapons were simply wooden clubs and stones used for hunting. The first stage in their development was the placing of a stone head on a wooden club, then, in the Middle East of c.3500 BC, a bronze head. Missile weapons such as spears, javelins, slings and bows also originated in prehistoric times, and were tipped with stone before metalworking was invented. Mechanical weapons, such as the **BALLISTA**, date at least from Roman times. Gunpowder, known to the ancient Chinese, was introduced into Europe by Tatars and Arabs in the 13th century. By the 15th century **CANNONS** were in general use. Small-arm artillery, operated by one man, first became effective with the 16th-century musket. In the second half of the 19th century, continuous-firing **MACHINE GUNS** and chemical propellants (nitrocellulose and nitroglycerine) were introduced. The chief 20th-century developments have been in **CHEMICAL WARFARE**, **BIOLOGICAL WARFARE**, **MISSILES** and **NUCLEAR WEAPONS**. See also pp.554-575.

Weapons, nuclear. See **NUCLEAR WEAPONS**.

Weasel, any of several species of small, carnivorous, mostly terrestrial mammals of Eurasia, N Africa, the USA and South America. Most species have small heads, long necks, slender bodies, short legs and long tails. Reddish-brown with light coloured underparts, some species turn completely white in winter. Weasels are fierce predators, eating eggs and rodents and often attacking much larger animals and domestic poultry. Length: 50cm (20in) overall. Family *Mustelidae*; Genus *Mustela*. See also pp.99, 304, 305.

Weather, state of the atmosphere in a given locality or over a broad area, particularly as it affects human activities. Weather refers to short-term states (days or weeks) as opposed to the long-term climatic conditions. Weather involves such elements as atmospheric temperature, pressure, humidity, precipitation, cloudiness, brightness, visibility and wind. See also **CLIMATE**; **METEOROLOGY**.

Weather forecasting, prediction of features and effects of the **WEATHER**. Factors measured include temperature, precipitation, storms and fair weather, travel and sea conditions, using data from any observations gathered from weather stations and using a variety of calculating and mapping techniques. Because of the intrinsic variability in the complex conditions determining the weather, even short-term, day-to-day weather predictions are fairly limited in accuracy. See also pp.252-253.

Weathering, in geology, breaking-up and chemical dissolution of rocks by the forces of nature. It is important in the formation of soil and plays a major part in shaping landscapes. In mechanical weathering in cold, wet climates water in rock crevices expands on freezing, so causing the rock to crack further and to crumble. Extreme temperature fluctuations in drier regions, such as deserts, also cause rocks to fragment. Crevices opened by the weather are exploited by plants, the roots of which place further strains upon the rock. Added to these physical effects are those of chemical weathering, which can lead to a weakening of the rock structure, and include oxidation, hydration, silication, desilication and carbonation.

Weather maps, charts made up by meteorologists showing **WEATHER** elements and conditions over wide areas, such as the whole of a country, to assist them in their forecasts and to inform the public. Compiled for surface or upper-level atmospheric conditions, such maps often show wind speed and direction, isotherms (lines of constant temperature), isobars (lines of constant pressure) depicting high- and low-pressure areas, ridges and troughs, various kinds of fronts and the cyclones and anticyclones associated with them, as well as the types of precipitation expected in various areas. See also **WEATHER FORECASTING**; pp.252-253.

Weather modification, the deliberate changing of weather conditions or systems by man, still in the experimental stage. Greater knowledge of precipitation has led to many cloud-seeding experiments to increase or decrease rain or snow in local areas.

Weather vane, or weathercock, device to indicate wind direction which comprises an upright rod with cross-members bearing the cardinal points of the compass and a revolving arm. The arm is arrow-shaped at one end and has a vane at the other whose large surface area is designed to react to wind pressure and point the arrow into the direction from which the wind is blowing. One of the oldest meteorological instruments, vanes are still in wide use, often connected to direction-recording apparatus.

Weaverbird, any of several species of short-billed, often yellow-and-black, finch-like birds that weave complex nests from grass and leaves. The weaverbirds are gregarious insect-eaters of hot, dry areas. The male of some species has several mates and constructs several nests. The African *Ploceus cucullatus* knots strands of grass together. Length: to 22cm (7.5in). Family *Ploceidae*.

Weaving, process of making fabric by intertwining two sets of threads. A loom is threaded with a set of warp threads. The weft thread is wound round a shuttle and passed between the warp threads, which are separated according to the desired pattern. A beater or reed keeps the woven rows tightly packed. Basic weaves are called plain, twill or satin. An ancient art, weaving is now both a popular craft and a major industry, using natural or man-made fibres. Automatic looms came into widespread use in about 1900. See also **MM** pp.58-59.

Webb, Sir Aston (1849-1930), British architect. His chief buildings in London are the Victoria and Albert Museum, the Royal College of Science, Imperial College, Admiralty Arch and the new eastern facade of Buckingham Palace.

Webb, Beatrice (née Potter) (1858-1943) and **Sidney** (1859-1947), eminent British socialists. Sidney Webb was one of the founders of the **FABIAN SOCIETY** and one of the chief protagonists of Fabian ideals. The Webbs helped to found the *New Statesman* (1913) and were a source of intellectual leadership for the British Labour Party.

Webb, John (1611-72), English architect. A follower of Inigo Jones, he continued to work in the **CLASSICAL** style. His best-known work was King Charles's Block (1665), the only part of his design for Greenwich Palace to be built.

Webb, Matthew (1848-83), British swimmer, the first to swim the English Channel.

Wax palms yield a resinous wax used in the manufacture of polishes and candles.

John Wayne pausing between scenes during the shooting of *The Longest Day* (1962).

Weaverbirds breed in colonies and are noted for their complex hanging nests.

Weaving developed from the simple interlacing of horizontal and vertical threads.

Webb, Philip

Carl Maria von Weber's music was the forerunner of German Romantic opera.

Josiah Wedgwood's stoneware found an international market in the 1760s.

Weevils use their elongated snouts for boring holes in which to lay eggs.

Weightlifting is used as an exercise by sportsmen to develop muscle power.

The feat was not accomplished again until 1923 and Webb's time was not beaten until 1934. Webb died attempting to swim the Niagara Falls.

Webb, Philip (1831–1915), British architect, one of the greatest of the English domestic revival. He specialized in house design and in the Red House at Bexley, built for William Morris in 1859, he developed a new, specifically English, style. His most famous work is *Clouds*, near East Knoke, Wiltshire, built in 1876.

Weber, Carl Maria von (1786–1826), German composer, conductor and virtuoso pianist. He influenced Wagner and helped to establish a German national style in his operas *Der Freischütz* (1821) and *Euryanthe* (1823). He also composed piano and chamber music, concerti and the popular *Invitation to the Dance* (1819). See also pp.1582, 1582, 1598, 1598.

Weber, Ernst Heinrich (1795–1878), German physiologist who pioneered the study of sensation and perception. He laid the foundations for the branch of psychology called "psychophysics", influenced other thinkers such as Gustav Fechner, and encouraged psychologists to be more scientific and methodical.

Weber, Max (1864–1920), German sociologist who advanced the concept of "ideal types", generalized models of social situations as a method of analysis and insisted that the social sciences should be empirical, based on comparative social history and free from value judgements. In his work *The Protestant Ethic and the Spirit of Capitalism* (1904–05), he postulated that Calvinism was influential in the rise of capitalism. See also pp.1652, 1653, 1750, 1842.

Weber, Max (1881–1961), US painter, b. Russia. He studied in Paris and was the first to introduce modern European influences into American art before WWI. Early in his career he embraced Fauvism and early Cubism.

Weber, Wilhelm Eduard (1804–91), German physicist who, in 1846, standardized the units used in electricity, relating them to the fundamental dimensions of mass, length, charge and time. He was the first physicist to regard electricity as composed of elementary units each carrying a charge, now known as electrons. The SI unit of magnetic flux is named after him. **Weber, SI UNIT** of magnetic flux equal to the flux that, linking a wire coil of one turn, will produce in it an electromotive force of one volt as it reduces to zero at a uniform rate in one second.

Webern, Anton von (1883–1945), Austrian composer, a student and disciple of Arnold Schoenberg. His *Pasacaglia* was outside the twelve-tone system which he adopted soon afterwards. His compositions include *Six Bagatelles* (1913) for string quartet, *Variations* (1940) for orchestra, cantatas and songs. See also pp.1754–1755, 1754–1755.

Weber's Line, imaginary line between the Celebes and Moluccan islands, drawn in 1902 to replace Wallace's Line demarcating Oriental from Australasian animal territories.

Web offset, method of printing in which the press utilizes continuous rolls (webs) of paper and lithographic printing plates on rotary printing machines. Web offset is widely used in the newspaper industry, where speed is a vital production factor. See also pp.613–615, 614–615.

Web spinner, common name for insects of the order Embioptera. There are 140 species, mostly tropical. They have fragile, yellow or brown bodies, biting mouthparts, short, stout legs and, in the male, two pairs of narrow wings. Larvae and adults have silk-producing glands, but the insects are not of great economic importance. Length: to 20mm (0.8in).

Webster, Daniel (1782–1852), US statesman and orator. As Secretary of State he was influential in preserving the Union of North and South in the debate over slavery. See also p.1628.

Webster, John (c.1580–1625), English dramatist whose reputation rests upon his two great tragedies, *The White Devil* (1612) and *The Duchess of Malfi* (1614).

Both plays treat the theme of revenge and generate an atmosphere of gloom and despondency. See also HCL pp.282, 285.

Webster, Noah (1758–1843), US lexicographer and writer. He completed his monumental *American Dictionary of the English Language*, containing 70,000 words in 1828. It was the largest English dictionary published up to that time.

Weddell, James (1787–1834), British Antarctic explorer. Aided by unusually open ice conditions, he discovered in 1823 the part of the Atlantic Ocean that projects into Antarctica's coastline, which he called the George IV Sea, later named Weddell Sea. The most southerly point he reached was 74°15' S, 34°17' W, a record unbeaten for almost a century.

Wedekind, Benjamin Franklin ("Frank") (1864–1918), German dramatist whose use of theatre anticipated that of Expressionism and influenced Brecht. His plays include *Spring Awakening* (1891) and *Lulu* which appeared in two parts as *Earth-Spirit* (1895) and *Pandora's Box* (1900).

Wedge, in mechanics, an example of the inclined plane. It is used to multiply an applied force while changing its direction of action. For example, if a metal or wooden wedge is driven into a block of wood then a force is exerted by the wedge at right-angles to the applied force and greater than it. This principle also explains the wood-splitting action of an axe. See also pp.446–447, 447.

Wedgwood, Dame, Cicely Veronica (1910–), British historian. In 1962 she became an honorary fellow of Lady Margaret Hall, Oxford, and in 1965 an honorary fellow of University College, London. Her books include *The Thirty Years' War* (1938), *The King's Peace* (1955), *The King's War* (1958) and *The Trial of Charles I* (1964).

Wedgwood, Josiah (1730–95), British potter, descended from a family of Staffordshire potters. He pioneered the large-scale production of pottery at his Etruria works near Stoke-on-Trent, and became famous for his creamware. He is perhaps best known for his Jasper Ware which gave expression to the then current interest in the revival of classical art. See also pp.1493, 1543.

Wedgwood, Thomas (1771–1805), physicist, philanthropist and pioneer in photochemistry. In 1802 he succeeded in projecting an image on to paper sensitized with moist silver nitrate but was unable to fix it.

Wednesday, fourth day of the week, named after Woden, the chief god in Teutonic history and the Anglo-Saxon equivalent of Mercury.

Weed, uncultivated or unwanted plant usually found on wasteland and along roadsides. It produces many seeds, colonizes rapidly and crowds out other plants. Annual or perennial weeds are a threat to commercial crops because they compete for water and sunlight and harbour pests and diseases that can spread to the crop plants. Common weeds include daisies, nettles and thistles. Edible weeds include purslane and dandelions.

Weedkiller. See HERBICIDE.

Weekes, Everton de Courcy (1925–), West Indian cricketer for the West Indies and Barbados. A batsman of savage power and a superb range of strokes, he played in 48 Test matches between 1948 and 1958 (scoring 4,455 runs, at an average of 58.61) and established a world record of five consecutive Test centuries.

Weekes, Thomas (c.1575–1623), English madrigal composer and organist. Almost 100 of his madrigals have survived, the finest being sets of five- and six-part madrigals, many of which are expressively individual and bold in harmony.

Weeping willow. See WILLOW.

Weever, any of four species of small fish that commonly bury themselves in sand in European and Mediterranean coastal waters. Poison spines on the dorsal fin and gill covers can inflict a painful sting. Family Trachinidae; genus *Trachinus*.

Weevil, any of numerous species of beetles that are pests to crops, especially

the numerous snout beetles (time weevils), with long, down-curved beaks for boring into plants. Each species is typically specialized for feeding on parts of particular plants. Family Curculionidae. See also BOLL WEEVIL; pp.304, 306–307, 306–307.

Wegener, Alfred Lothar (1880–1930), German geologist, meteorologist and Arctic explorer. In *The Origin of Continents and Oceans* (1915) he set forth his theory of CONTINENTAL DRIFT. See also pp.200, 200.

Weidenreich, Franz (1873–1948), US anatomist and physical anthropologist who pioneered the study of Peking man. While associated with the American Museum of Natural History he studied Java man in the 1940s. See also p.112.

Weigela, genus of flowering shrubs native to E Asia and now grown in many parts of the world. There are 12 species. The shrubs grow up to 4m (13ft) tall and have narrow oval leaves. The flowers are white to red, tubular and borne in clusters 3.5cm (1.5in) long. The long narrow seed pods split to disperse the seeds. Family Caprifoliaceae.

Weight, force of attraction on a body due to GRAVITY. A body's weight W is the product of its mass (m) and the acceleration due to gravity at that point (g): $W = mg$. Mass remains constant, but weight depends on position on the Earth's surface, decreasing with increasing altitude. See also pp.450–451.

Weightlessness, condition experienced by an object on which the force of GRAVITY is neutralized. Such an object is said to have zero gravity and no weight; it floats and cannot fall. Weightlessness is experienced in space and during a free fall, eg when a car passes at speed over a humpback bridge. Astronauts are trained in the weightless conditions that exist for about 20 seconds in an aircraft that flies in an arc (similar to the car and bridge experience), and the near-weightlessness caused by the buoyancy of water. The adverse effects on the human body of prolonged weightlessness (called hypogravics) include decreased circulation of blood, less water retention in tissues and the bloodstream, and loss of muscle tone. Several protective mechanisms have been developed to combat the effects of weightlessness, and others are being studied. See also pp.1024–1025.

Weightlifting, exercise or sport in which weights at the ends of a bar are lifted over the head. As a competitive sport it is popular in Europe, Egypt, Japan, Turkey, the USA and the USSR. Competitions are conducted according to weight classes that range from bantamweight to heavyweight. In a weightlifting competition, each participant uses three standard lifts known as two-hand press, clean-and-jerk, and snatch. The man who lifts the greatest combined total of weights wins. There was a weightlifting competition at the Olympic Games in 1896, but it did not become a regular event until 1920.

Weights and measures, agreed units for expressing the amount of some quantity, such as capacity, length or weight. Early measurements were based on body measurements and on plant grains. The French introduced the metric system (1799), in which the unit of length, the metre, was taken as one ten millionth of the distance from the Equator to the North Pole. A litre was the volume occupied by one kilogramme of water. The modern metre is defined as 1,650,763.73 wavelengths of the red-orange light from an atom of KRYPTON-68 under specified conditions. See also CGS SYSTEM; MKS UNITS; SI UNITS; pp.450–451, 776–777, 782–783.

Weight training, method of physical training involving the use of weights in gymnastic exercises. By lifting the weights and working to a prescribed programme of repetitive exercises, weight trainers improve their general fitness, muscular strength and physique. See also WEIGHTLIFTING.

Weil, Simone (1909–43), French philosopher who became a teacher and wrote for journals catering for Socialist and

Communist readings. Later, and in ill health, she studied biblical and Hindu teachings and was most attracted to Catholicism. Most of her works were published after her death and include *Gravity and Grace* (1947) and *Waiting for God* (1951).

Weill, Kurt (1900–50), German composer who first became known for his satirical opera *Der Protagonist* (1926). His productive collaboration with Bertolt BRECHT began with the *Rise and Fall of the City of Mahagonny* (1927). *The Threepenny Opera* (1928) was a modern version of John GAY's *Beggar's Opera*, again with libretto by Brecht. In 1935 Weill emigrated to the USA, where he wrote scores for Broadway musicals. See also p.1599.

Weill's disease. See LEPTOSPIROSIS.

Weimaraner, agile hunting dog that was originally bred in Germany in the 19th century. It has a long, tapering head, light amber, grey or blue eyes and folded ears. The medium-length lean body is set on straight muscular legs. Its tail is commonly docked to 15cm (6in), and the short, sleek coat is mouse or silver grey. Height: to 68.5cm (27in) at the shoulder; weight: to 38.5kg (85lb).

Weimar Republic (1919–33), the German federal republic set up after WWI with a constitution that provided for a democratically elected president and a Reichstag of deputies. Forced by the Allies to agree to the humiliating demands of the VERSAILLES Treaty and financially crippled by demands for reparations that could not be met, the Weimar governments were convulsed by a succession of economic and political crises, which facilitated the rise of extremist groups, including the Nazis. The constitution was abolished by the Nazis in 1933. See also pp.1704–1705.

Weingartner, Paul Felix (1863–1942), Austrian composer and conductor, who became a Swiss citizen in 1937. From 1898 he conducted in Europe and the USA. In 1907 he became conductor of the Court Opera in Vienna and was director of the Vienna State Opera from 1935 to 1936.

Weiskopf, Tom (1942–), US golfer. His best year was 1973, when he won seven major tournaments, including the British Open and the World Series. He was runner-up in the US Masters of 1972 and US Open of 1976.

Weiss, Peter (1916–), Swedish dramatist b. Germany. His reputation was established with an exploration of French revolutionary precepts in *The Persecution and Assassination of Jean-Paul Marat as Performed by the Inmates of the Asylum of Charenton Under the Direction of the Marquis de Sade* (1964). Other plays include *The Investigation* (1965) and *Trotsky in Exile* (1970).

Weissmüller, Johnny (1904–), US swimmer and actor. He won gold medals at the 1924 and 1928 Olympics and later played Tarzan in a series of Hollywood films about a noble white man living with apes in darkest Africa.

Weizmann, Chaim (1874–1952), first President of Israel from 1948 to 1952. He was born in Russia and became a naturalized British subject in 1910. A noted chemist, he aided the British munitions industry during WWI by developing a method of making acetone, and played an important role in persuading the British government to agree to the establishment of a Jewish national home in Palestine. He was president of the World Zionist Organization from 1920 to 1931 and from 1935 to 1946, and became president of the Provisional State Council of Israel in 1948. He was elected President of Israel in 1949.

Welding, technique for joining metallic parts by melting some of the metal so that the parts fuse together. A number of processes can be used, depending on the physical properties of the metals to be joined and their intended use. In arc welding, a metal rod forms one of the electrodes in an electric circuit, and the metals being welded form the other. An electric arc of intense heat develops between the rod and the joint when both are close together, which fuses the metals. In OXYACETYLENE WELDING, the heat is provided by burning

acetylene gas in oxygen. In resistance or spot welding, the heat is generated by the electrical resistance of the joint; this method is fast and uses low-voltage, high-current electricity. Spot welds are made at regular intervals to join sheet metal. Electron beams and ultrasonics may also be used in welding techniques. See also BRAZING; SOLDERING; pp.406, 407.

Weldon, George (1908–63), British conductor. He was permanent conductor of the City of Birmingham Symphony Orchestra (1943–51), conductor for the Sadler's Wells Ballet (1955–56) and from 1952 to 1956 associate conductor of the Hallé Orchestra, Manchester.

Weldon, Walter (1832–85), British chemist. He devised a process for recovering manganese in a useful form (manganese dioxide) from manganese chloride in the manufacture of chlorine, a bleaching agent essential to the textile industry.

Welensky, Sir Roy Roland (1907–), Rhodesian politician. He was a Northern Rhodesian MP (1938–53) and member of the Executive Council (1940–53). He was deputy Prime Minister of the Federation of Rhodesia and Nyasaland (1953–56) and Prime Minister and Minister of External Affairs (1956–63).

Welfare state, description of a state which takes responsibility for the health and subsistence of its citizens. The term is specifically used to describe the system in Britain, where services such as the NATIONAL HEALTH SERVICE were organized by the (1945–51) Labour government. See also pp.1573, 1782, 1782.

Welhaven, Johan Sebastian Cammermeyer (1807–73), Norwegian lyric poet. In his verse, including the sonnet cycle *The Dawn of Norway* (1834) and *The Spirit of Poetry*, he attacked the nationalism of poets such as WERGELAND.

Well, shaft sunk vertically in the Earth's CRUST through which water, oil, natural gas, brine, sulphur or other mineral substances can be extracted. Artesian wells are sunk into water-bearing rock strata, the so-called AQUIFERS, from which water rises under pressure in the wells to the surface. See also FRASCH PROCESS; PETROLEUM.

Well, in architecture, vertical space in a building, such as that occupied by the staircase or the lift shaft.

Welland Canal, Canadian man-made navigable waterway connecting Lake Erie with Lake Ontario, about 16km (10 miles) W of the Niagara River; it was built to avoid the Niagara Falls. The present canal (opened in 1932) replaced an older waterway, partly on a new route. It is 43km (27 miles) long and can take ships up to 210m (700ft) long.

Weller, Thomas Huckle (1915–), US bacteriologist and virologist. He shared the 1954 Nobel Prize in physiology and medicine with John F. ENDERS and Frederick C. ROBBINS for the discovery that the poliomyelitis virus can grow in cultures of various types of tissue (so making it possible to develop a VACCINE for polio).

Welles, Orson (1915–) US actor and director whose first film, *Citizen Kane* (1940), earned him an OSCAR and is regarded as a cinematic milestone. After further success in *The Third Man* (1949) and *Touch of Evil* (1958), Welles directed European productions including *The Trial* (1963), *Chimes at Midnight* (1966) and *The Immortal Story* (1968). See also p.1760.

Wellesley, Arthur. See WELLINGTON, ARTHUR WELLESLEY, DUKE OF.

Wellington, Arthur Wellesley, Duke of (1769–1852), British general and statesman, commanded allied forces in the PENINSULAR WAR (1808–14) and drove the French back over the Pyrenees in 1814, during the NAPOLEONIC WARS. He was created a duke in 1814 and represented Britain at the Congress of VIENNA (1814–15). Together with the Prussian Gen. von Blücher, he defeated NAPOLEON and the French at the Battle of WATERLOO (1815). He became a Tory cabinet minister in 1818 and Prime Minister (1828–30). He supported the Catholic

Emancipation Act (1829), but opposed parliamentary reform, over which he resigned in 1830. See also pp.1555, 1555.

Wellington, capital of New Zealand, in s North Island, on Port Nicholson, an inlet of Cook Strait. Founded in 1840, it replaced Auckland as capital in 1865. It has an excellent harbour with floating docks, and is an important rail centre. The city has a National Art Gallery (1936) and the Victoria University of Wellington (1962) is a cultural centre. Industries: textiles, clothing, machinery, transport equipment, food processing. Pop. (1979 est.) 350,100.

Wells, Henry (1805–78), US pioneer express postman. In 1852 he formed the Wells Fargo company to serve Californian gold fields and the new west.

Wells, Herbert George (1866–1946), British author whose reputation was established with his science fiction *The Time Machine* (1895), *The Invisible Man* (1897) and *The War of the Worlds* (1898). Novels drawing on his own experiences include *Love and Mr Lewisham* (1900), *Kipps* (1905) and *Tono-Bungay* (1909), while *Ann Veronica* (1909) and *The New Machiavelli* (1911) reflect his strong interest in sociology and politics.

Wells, Horace (1815–48), US dentist, pioneer in the practice of painless dentistry. He used nitrous oxide (laughing gas) in the extraction of teeth. After ether became generally accepted as an ANAESTHETIC, he argued for the use of nitrous oxide as safer and equally effective. See also p.1096.

Welsbach, Carl Auer, Freiherr von (1858–1929), Austrian chemist, inventor of the Welsbach mantle, a shaped gauze which, when heated by gas, produces a bright light. In 1885 he discovered the elements NEODYMIUM and PRASEODYMIUM.

Welsh, language of Wales, spoken by about 25% of the Welsh population (about 600,000 people). Related to GAELIC, and more closely to BRETON, Welsh is one of the Celtic languages and a member of the INDO-EUROPEAN family. See also p.1747.

Welsh corgi, small, stocky dog originating in Wales, once widely used to herd cattle and Welsh ponies. There are two varieties: the Pembroke, with a short tail and pointed ears, and the Cardigan, with a long bushy tail and rounded ears. The head is short, pointed and fox-like. Height: 25–30cm (10–12in); weight: 7–10kg (15–24lb).

Welsh Laws, series of medieval laws in Wales, probably first promulgated by Hywel the Good in the first half of the 10th century. The manuscripts of three versions of the laws are extant, named after the lawyers chiefly associated with them, Iorwerth, Blegwyrd and Cynferth. The laws partially survived the NORMAN CONQUEST and the Statute of RHUDDLAN, but were superseded by English law at the union of England and Wales in the 1530s.

Welsh Nationalist Party. See PLAID CYMRU.

Welsh Office, British government department based in Cardiff and responsible for the administration of Wales. Its responsibilities include social welfare, housing, local government, education, planning and industry. It is under the jurisdiction of the Secretary of State for Wales.

Welsh pony, light saddle horse of a breed known in Wales since Saxon times. Usually a child's mount, it has the physique of a miniature coach horse with good head and neck, short muscular body, and great endurance. The coat may be grey, bay, chestnut or black. Height: to 1.2m (48in) at the shoulder; weight: to 225kg (500lb).

Welsh Presbyterian Church. See CALVINISTIC METHODIST CHURCH.

Welsh terrier, dog that was originally bred in Wales to hunt badgers, foxes and otters. Once called old English terrier, it has a long head with chin whiskers, V-shaped ears and small, dark eyes. The short, straight body is set on straight, muscular legs and the tail is carried high up. Its hard, wiry coat may be any combination of black and tan. Height: to 38cm (15in) at the shoulder; weight: to 9kg (20lb).

Welsh trust, charitable society founded by

Chaim Weizmann sums up the Zionist views on the Palestinian Question in 1947.

Duke of Wellington, the "Iron Duke", an honoured soldier and statesman.

Welsh corgis; the two varieties are very similar because of cross-breeding.

Welsh ponies originated in the Welsh mountains and were used as pit ponies.

Welwyn Hatfield

Wembley stadium, venue of various sports fixtures including the FA cup finals.

the London NONCONFORMIST minister, Thomas Gouge, in 1674 to distribute the Bible and other religious literature in Wales. It also established and ran charity schools.

Welwyn Hatfield, county district in central Hertfordshire, England; created in 1974 under the Local Government Act (1972). Area: 128sq km (49sq miles). Pop. (1979 est.) 92,800.

Wembley, complex of sports stadiums in the suburb of the same name, in NW London. The outdoor stadium with its twin towers, opened in 1923, is used for the finals of the FA Cup, Football League Cup and Rugby League Cup, as well as England's home international football matches. It has also staged speedway and, in 1948, the Olympic Games. In the nearby Empire Pool, a covered arena, ice shows and pop concerts share the facilities with boxing, show jumping, basketball and other sports.

Wenceslas, Saint (c.907-29), Bohemian prince noted for his Christian piety, who was killed by his brother Boleslav. He became recognized as the patron saint of Bohemia; his feast day is 28 Sept. He is famous as the hero of the 19th-century carol, *Good King Wenceslas*.

Wenceslaus (1361-1419), Holy Roman Emperor (1378-1400) and King of Bohemia (1378-1419), as Wenceslaus IV. His reign was characterized by wars, conspiracies and periods of anarchy. He was deposed as emperor in 1400 and his powers as Bohemian king were undermined by the challenges of his brother Sigismund.

Wen Cheng-ming (1470-1559), Chinese painter of the MING DYNASTY and an exponent of *wen-jen* (painting of the literati style). He was a pupil of SHEN CHOU and an innovative figure whose combinations of dry brush and wet washes influenced many later painters. See also pp.1500, 1500.

Wends, name given to the Slavs living between the Oder and Elbe rivers in the early Middle Ages. They were conquered by CHARLEMAGNE but not fully Christianized until the 12th century.

Wen Ting-yun (fl.9th century), one of the leading Chinese poets of the late period of the T'ang dynasty (618-906). At its best, his verse displays restrained yet vibrant imagery, but at the other extreme its artificiality anticipates the poetic decadence that followed. Li Shang-yin (813-58) wrote similar verse.

Wentworth, William Charles (1793-1872), Australian journalist and politician. In 1824 he founded the *Australian* newspaper, which he used to promote the cause of self-government for the Australian colonies. His agitation was the most important factor leading to the granting of self-government by the British Parliament in 1842.

Wenzel, Carl Friedrich (1740-93), German scientist. He supported the theory of PHLOGISTON, and from his book *Introduction to Higher Chemistry* (1774), he was associated with ALCHEMY. Much of his work was, however, of scientific value, especially that on chemical affinity.

Werewolf, in folklore, a person who metamorphoses into a wolf at night but reverts to human form by day. Some werewolves can change form at will, in others the change occurs involuntarily, under the influence of a full moon.

Wergeland, Henrik Arnold (1808-45), Norwegian poet and patriot who worked hard for cultural independence from Denmark. A champion of democracy, he is considered Norway's national poet.

Wergild, Anglo-Saxon payment made by a murderer or his kin to the kin of a murdered man (*wer*). The payment varied according to the social rank of the victim; in WESSEX, the payment was 200 shillings for a CEORL and 1,200 shillings for a THEGN. It fell into almost entire disuse after the NORMAN CONQUEST.

Werner, Abraham Gottlob (1750-1817), German geologist who was the first to classify minerals systematically. His theory of the Earth's origins, called neptunism, proposed that the Earth was originally a vast ocean from which solid rocks were precipitated to form land.

Werner, Alfred (1866-1919), German-Swiss chemist. After working with Marcelin BERTHELOT in Paris he returned to a professorship at Zurich University. In 1913 he was awarded the Nobel Prize in chemistry for his co-ordination theory of VALENCY.

Werner, Theodor (1886-), German painter who studied at the Stuttgart Academy. He lived in Paris for a time, where he became associated with BRAQUE and MIRÓ. He was strongly influenced by CUBISM, and his paintings became more and more abstract.

Wernerite. See SCAPOLITE.

Wertheimer, Max (1880-1943), German psychologist. He was one of the founders of the GESTALT PSYCHOLOGY movement and his early work concerned visual perception. Later he attempted to apply Gestalt principles to thinking and educational problems.

Wesker, Arnold (1932-), British playwright and director whose reputation was established with the trilogy of plays *Chicken Soup with Barley* (1958), *Roots* (1959) and *I'm Talking about Jerusalem* (1960). Other works include *Chips with Everything* (1962), *The Friends* (1970) and *Love Letters on Blue Paper* (1974).

Wesley, John (1703-91), British theologian and evangelist who founded METHODISM. With his brother Charles he founded the so-called Holy Club at Oxford in 1729. In 1735 they went as missionaries to Georgia, where they established the principles of Methodism which spread quickly after John Wesley's return to England, and many lay preachers were enrolled to help. His *Journal* (1735-90) records the great extent of his itinerant preaching, which often brought Christianity to many who had not known it before.

Wessex, ANGLO-SAXON kingdom, possibly settled by the Saxon Cerdic in 495. Its central core was what later became the counties of Hampshire, Dorset, Wiltshire and Somerset. The invasion by the Danes (865) was resisted by Wessex; ALFRED of Wessex became king (886) of all England not then under Danish rule. See also pp.1218, 1218, 1288.

Wessex culture, name given to the culture of s Britain in the early Bronze Age (shortly after 2000 bc). The culture was marked by more widespread agriculture, and rich burial mounds, probably indicating a more stratified society than hitherto. The Wessex culture was responsible for the last period of building at STONEHENGE, and may have been in contact with Mycenaean Greece. See also pp.1218, 1218.

West, Benjamin (1738-1820), US painter who studied in Italy and then settled in Britain, where he became historical painter to George III and a leader of the NEO-CLASSICAL movement. He succeeded Sir Joshua REYNOLDS as president of the Royal Academy in 1792. His works are mostly of historical, mythological and religious subjects and two of his best-known paintings are *Death of Wolfe* (1771) and *Penn's Treaty with the Indians* (1772).

West, Mae (1893-1980), US actress and film star. Her first film was *Night After Night* (1932) and others included *She Done Him Wrong* (1933) and *My Little Chickadee* (1940). The overt sexuality and wit of her characterizations made her a legend in showbusiness history. A particularly bulky form of life jacket used widely in World War II was named after her.

West, Morris Langlo (1916-), Australian novelist whose first novel, *Gallows on the Sand*, was published in 1955. He also wrote such best-sellers as *The Devil's Advocate* (1959), *Shoes of the Fisherman* (1963), *The Ambassador* (1965) and *The Salamander* (1973).

West, Nathanael (1903-40), US novelist and scriptwriter, b. Nathan Weinstein. He wrote only four novels, and they did not gain critical acclaim until after his death. They are *The Dream Life of Balso Snell* (1931); *Miss Lonelyhearts* (1933), a grimly comic story about the writer of a column for the *lovelorn*; *A Cool Million* (1934); and *The Day of the Locust* (1939), about false dreams and failed lives in Hollywood, where West spent his last years as a scriptwriter.

West, Dame Rebecca (1892-), British novelist and critic, b. Cicily Isobel Fairfield. An ardent feminist, she took her pseudonym from the liberated character she had once played in Ibsen's *Rosmersholm*. She worked on many publications after 1911, became the mistress of H.G. WELLS in 1913 and published studies of Henry JAMES (1916) and James JOYCE (1928). Her political works include *The Meaning of Treason* (1949), and she wrote perceptively psychological novels such as *The Thinking Reed* (1936) and *Birds Fall Down* (1966).

West Africa, loose geographical term used to describe the area of the African continent between the Sahara Desert and the Gulf of Guinea, bounded on the E by the E border of Cameroon and on the W by the Atlantic Ocean. Usually included are the political units of Senegal, Guinea Bissau, Gambia, Guinea, Sierra Leone, Liberia, Ivory Coast, Ghana, Togo, Benin, Nigeria, Cameroon, Upper Volta and the parts of Mali and Niger s of the Sahara.

West Bengal, state in NE India; the capital is Calcutta. It was formed in 1947 after the independence of India and Pakistan and the partitioning of the former British presidency of Bengal into the Hindu or West Bengal region of India, and Muslim or East Pakistan region. In 1950, West Bengal absorbed the state of Cooch Bihar and political instability was caused by Muslim-Hindu disputes, large refugee immigration from Bangladesh and Maoist Naxalite disturbances. Manufactures include chemicals and steel, and there is some mining for coal and manganese; agricultural products include rice, vegetables, fruit and tobacco. Area: 87,853sq km (33,920sq miles). Pop. (1976 est.) 49,800,000.

West Berlin. See BERLIN.

West Bromwich, former county borough in Staffordshire, W central England, 8km (5 miles) NW of Birmingham; since 1974 it has been part of the metropolitan county of WEST MIDLANDS. A major industrial city of the Midlands, it has coal mining, metal goods and chemical industries. Pop. (1971 est.) 166,625.

West End, district of London. It is generally acknowledged to cover the area from Trafalgar Square to Oxford Street, and from Charing Cross Road to Hyde Park Corner, and to include SOHO. It is renowned for its big stores, cinemas and its commercial theatres.

Westerlies, air currents or persistent winds from the west. They occur in both hemispheres between 35° and 60° latitude. See also EASTERLIES; p.248.

Western, type of popular fiction and film, native to the USA. It first appeared in the form of short stories and novels in the "pulp" magazines of the late 19th century. Mark TWAIN's *Roughing It* (1872) became a classic and Zane GREY wrote more than 80 novels on frontier life. Owen WISTER's *The Virginian* (1902), about Wyoming cowboys, is still popular. *The Squaw Man* (1914) was one of the first Hollywood westerns and set a trend for a whole new breed of movie cowboy such as Tom MIX, Roy ROGERS, Buck JONES and William BOYD, who appeared as "Hopalong Cassidy" in 1935.

Western Australia, largest state in Australia, bordered by the Timor Sea (N), the Indian Ocean (W and S), South Australia state and the Northern Territory (E). The climate is tropical. Only the area to the SW, which enjoys a temperate climate, is permanently settled: the Swan River, the state's sole water source, drains this region. The raising of sheep and cattle is the principal agricultural activity but the production of cereals is also important. Western Australia is the country's major gold-producing state; there is also some mining for iron ore, coal and nickel. Industry is still expanding; machinery and transport equipment are manufactured. The capital is Perth. Other major cities include Fremantle, Kalgoorlie and Bunbury. Western Australia was first visited by Dirk Hartog in 1616 although settlement did not begin until 1826 when a penal colony was founded. The first free settlement was in 1829. The state was

John Wesley met with opposition from the Anglican Church during his early career.

Benjamin West was inspired by classical themes as well as by more recent history.

Mae West: platinum blonde stage and film actress who became a legendary sex-symbol.

governed by New South Wales until 1831 and it became a state of the Commonwealth of Australia in 1901. Area: 2,525,500sq km (975,095sq miles). Pop. (1976) 1,169,800. See also p.1974.

Western Isles, island authority in the Atlantic Ocean off the NW coast of Scotland, formed in 1975 from parts of the former counties of Ross and Cromarty and Inverness. Area: 2,910sq km (1,120sq miles). Pop. (1979 est.) 29,255.

Western Sahara, formerly Spanish Sahara, desert territory on the coast of NW Africa. In 1976 Spain withdrew its forces and the area was divided between Morocco to the N and Mauritania to the S. In 1979 Mauritania relinquished control of its part of the Spanish Sahara to Polisario guerrillas. Industry: phosphate mining. Area: 266,000sq km (102,703sq miles). Pop. (1976 est.) 151,275.

Western Samoa, independent island state in the S Pacific Ocean, made up of the W part of Samoa and nine other main islands including Upolu, which has the capital Apia. Many of the people are farmers, growing yams, bananas, cacao and coconuts and raising pigs and poultry. Industries include food processing and furniture-making; tourism is of increasing importance. Area: 2,841sq km (1,097sq miles). Pop. (1978 est.) 157,000. See also p.2171.

West front, in architecture, main façade of a church or cathedral.

West Germany. See GERMANY, WEST.

West Glamorgan, county in S Wales on the Bristol Channel, formed in 1974 from part of the former county of Glamorgan and the county borough of Swansea. The administrative centre is Swansea. Area: 816sq km (315sq miles). Pop. (1979 est.) 366,600.

West Highland terrier, also called West Highland white terrier, hunting dog originally bred in Scotland; the breed is descended from white CAIRN TERRIERS. It has a broad head that tapers to a large nose, small, erect ears and dark eyes under heavy eyebrows. The compact, deep-chested body is set on short legs and the short tail carried up. Bred white to distinguish it from game, it has a double coat. Height: to 30.5cm (12in) at the shoulder; weight: to 11kg (24lb).

West India Company, name of two colonial trading companies, one Dutch, the other French. The Dutch company was founded in 1621 and was given a monopoly of trade with Dutch colonies in America and Africa and a monopoly of ownership of the American colonies. It was the dominant power in the early days of the SLAVE TRADE. It was dissolved in 1794. The French company was incorporated in 1664 and was given a monopoly of trade and ownership in all French colonies in America and West Africa except Newfoundland. The Company was not profitable and its trading rights were revoked in 1674. It was liquidated in 1719.

West Indies, chain of islands encircling the Caribbean Sea and separating it from the Atlantic Ocean, extending from Florida, USA, to Venezuela. Geographically they are divided into three main groups: the Bahamas, the Greater Antilles and the Lesser Antilles, which include the Leeward and Windward islands. Most islands are now independent, but were formerly American, British, Spanish or Dutch possessions.

West Indies Associated States, association composed of the LEeward and WINDWARD ISLANDS, formed in 1967. Full internal power rests with the islands' independent governments; Britain is responsible only for defence and foreign affairs.

Westinghouse, George (1846-1914), US inventor. He received his first patent in 1865 for a rotary engine. He also devised a railway frog (track junction device) and in 1869 the air brake, which made high-speed rail travel safe and which is still standard equipment. He formed the Westinghouse Electric Co., a firm holding more than 400 patents dealing with rail transport.

West Irian. See IRIAN BARAT.

West Lancashire, county district in SW

LANCASHIRE, England, created in 1974 under the Local Government Act (1972). Area: 327sq km (126sq miles). Pop. (1979 est.) 108,300.

West Lothian, former county in S central Scotland, S of the Firth of Forth; since 1975 it has been divided between Lothian and CENTRAL regions. The land slopes gradually from the Firth to hills in the S. Dairy farming is important in the lowlands and sheep are grazed in the hills. Industries: coal mining, engineering, iron and steel, textiles, distilling, paper, motor vehicles, food processing. The county town was Linlithgow. Area: 311sq km (120sq miles).

Westmacott, Sir Richard (1775-1856), British sculptor. He worked under CANOVA in Rome, and in London executed the panels for the Marble Arch, the bronze *Achilles* in Hyde Park (1822) and the figures on the pediment of the British Museum portico.

Westmeath, county in Leinster province in the N central Republic of Ireland, bounded by the counties of Meath, Cavan, Roscommon and Offaly. It is mainly lowlying with many lakes or loughs, including Loughs Sheelin and Ree. It is drained by the rivers Shannon, Inny, and Brosna. The main economic activity is cattle raising. The county town is Mullingar. Area: 1,763sq km (681sq miles). Pop. (1979) 59,885.

West Midlands, county in central England, formed in 1974 from parts of the former counties of STAFFORDSHIRE, WORCESTERSHIRE and WARWICKSHIRE, and including the former county boroughs of Birmingham, Warley, Solihull, Coventry, West Bromwich, Dudley, Walsall and Wolverhampton. Wolverhampton is the administrative centre. Area: 899sq km (347sq miles). Pop. (1979 est.) 2,696,000.

Westminster, City of, part of the London borough of Westminster since 1965. Westminster was the site of a monastery from 785, and EDWARD the CONFESSOR built WESTMINSTER ABBEY there, and a palace, which was the principal royal residence until 1512. Parliament met in Westminster Palace until a fire in 1834 led to the building of the Houses of Parliament (1840-67).

Westminster, Statutes of, name given to three medieval legislative promulgations passed by Edward I at Parliament held at Westminster, London, and to one statute passed in 1931. Westminster I (1275) was intended to codify unwritten law. Westminster II (1285) was referred to as *De donis conditionalibus* because of its clause concerning preservation of inheritance of land. Westminster III (1290), referred to as *Quia emptores*, halted subinfeudation, the letting out of land upon feudal terms. Westminster IV (1931) gave legislative independence to the British dominions of Canada, Australia, New Zealand, South Africa, the Irish Republic and Newfoundland. See also pp.1732-1780.

Westminster Abbey, church in London where most British monarchs have been crowned since William the Conqueror. Edward the Confessor ordered the construction of a cruciform church in 1050 to replace a Benedictine monastery. Henry III began rebuilding the church in 1245. Henry VII's chapel, noted for its fan-traceried roof, was begun in 1503. Sir Christopher WREN and Nicholas HAWKSMOOR built the two western towers (1722-40) and Sir George Gilbert SCOTT supervised extensive restoration in the late 19th century. The church as it stands in the 1970s is an impressive conglomeration of Gothic and Perpendicular styles with French influences and Victorian décor. In the south transept, where Poet's Corner is to be found, are the tombs of CHAUCER, BROWNING and TENNYSON. See also pp.1329, 1334, 1353, 1400.

Westminster Assembly (1643-52), conference organized by the LONG PARLIAMENT to settle the religion of the CHURCH OF ENGLAND. Most of its 30 lay and 12 clerical members were CALVINISTS, and the Westminster Confession which they drew up has been generally accepted by PRESBYTERIANS. It was rejected in England when the monarchy was restored in 1660.

Westminster Cathedral, in Victoria, London, the cathedral of the Roman Catholic Archbishop of Westminster. Begun in 1895, it is built in the Byzantine style. Bands of red brick and stone give the exterior a distinctive pattern. The cathedral was first used for services in 1903.

Westminster Hall, building in London, built by William Rufus between 1097 and 1099. The present roof, completed by RICHARD II in 1399, is one of the largest timber roofs (unsupported by pillars) in the world. The hall, once London's principal law court, survived fires in 1512, 1834 and 1941.

Westmorland, Ralph Neville, 1st Earl of (1364-1425), English nobleman, created an earl in 1397. He married a daughter of JOHN OF GAUNT, supported Henry of Lancaster's revolt in 1399 against RICHARD II and suppressed anti-Lancastrian revolts in 1403 and 1405. His daughter, Cecily, became the mother of EDWARD IV and RICHARD III.

Westmorland, former county in NW England; since 1974 it has been part of the new county of CUMBRIA. Largely mountainous, the region includes much of the LAKE DISTRICT and attracts many tourists. Pastoral farming is important to the economy; beef and dairy cattle and sheep are raised. There is also some quarrying for slate, limestone and granite. The county town was Appleby. Area: 2,044sq km (789sq miles).

West Norfolk, county district in NORFOLK, England, created in 1974 under the Local Government Act (1972). Area: 1,413sq km (546sq miles). Pop. (1979 est.) 119,100.

Weston, Edward (1886-1958), US photographer. He co-founded the f/64 group whose sharp images greatly influenced photographic aesthetics.

Weston, Sir Richard (1591-1652), English agricultural writer who introduced the theory of crop rotation. His *Discours of the Husbandrie used in Brabant and Flanders* (1645) spread Flemish agricultural ideas among English farmers. See also p.1464.

Westphalia, area of W Germany between the rivers RHINE and Weser. Originally belonging to Saxony, it was separated in 1180 and ruled as a duchy by the Elector of Cologne until 1803. It was conquered by NAPOLEON in 1807, and after the Congress of Vienna in 1815 was given to Prussia. The RUHR region was occupied by the French after WWI and, after heavy destruction in WWII, was in the British zone of occupation until 1946.

Westphalia, Peace of. See PEACE OF WESTPHALIA.

West Point, US military post in SE New York State, on the W bank of the Hudson River, approx. 80km (50 miles) NW of New York City; since 1802 it has been the seat of the US Military Academy. Area: 6,470 hectares (16,000 acres).

West Riding, administrative district in the former county of YORKSHIRE, N England; since 1974 the area has been divided into the new counties of NORTH YORKSHIRE and WEST YORKSHIRE.

West Side Story, (1957), musical play with lyrics by Stephen Sondheim, music by Leonard BERNSTEIN, story by Arthur Laurents and choreography by Jerome ROBBINS, first produced on Broadway. It was an adaptation of SHAKESPEARE'S *Romeo and Juliet* set in modern New York City. It was made into a successful film in 1961.

West Sussex, county in SE England, formed in 1974 from the administrative district of West Sussex in the former county of SUSSEX and parts of the administrative districts of East Sussex and Surrey. Area: 2,016sq km (778sq miles). Pop. (1979 est.) 643,800.

West Virginia, state in E central USA, in the Appalachian Mt region. Hay, tobacco, corn and apples are the principal crops. West Virginia has rich mineral deposits and is the leading US producer of bituminous coal; oil and natural gas are also extracted. Some 65% of the land is forested, much of it with valuable hardwoods. The principal industries are glass, chemicals, steel, machinery and tourism. Charleston is the state capital.

West Highland terrier, only all-white Scottish breed; its undercoat is short and soft.

West India Company, Dutch company founded to make use of profits of the slave trade.

Westminster Abbey; Henry VII's chapel, begun in 1503 and completed by Henry VIII.

West Point, site of this civil war monument and the US Military Academy.

West Wiltshire

Settlers from Virginia crossed the Appalachian and Allegheny Mts in the 1700s, first settling the Ohio River valley. The region was part of Virginia, but political and economic disagreements arose between the new settlements and those in the E. When Virginia seceded from the Union in May 1861 there was much opposition in the W, where a loyal government at Wheeling was formed in June. It was admitted to the Union as West Virginia in 1863. Area: 62,629sq km (24,181sq miles). Pop. (1975 est.) 1,803,000. See also p.2161.

West Wiltshire, county district in W central WILTSHIRE, England; created in 1974 under the Local Government Act (1972). Area: 517sq km (200sq miles). Pop. (1979 est.) 98,800.

West Yorkshire, county in central N England, formed in 1974 from parts of the former WEST RIDING OF YORKSHIRE and including the former county boroughs of Bradford, Leeds, Huddersfield, Halifax, Dewsbury and Wakefield. Area: 2,039sq km (787sq miles). Pop. (1979) 2,064,100. **Wet, Christiaan Rudolph de**. See DE WET, CHRISTIAAN RUDOLPH.

Wet and dry thermometer. See HYGROMETER.

Wetland, marshy ground in an intertidal zone that has prolific vegetation; coastal wetlands are said to contain a greater concentration of living matter, both flora and fauna, than any other kinds of terrain. See also p.330.

Wetting agent, substance which, when added to a liquid, lowers the surface tension and so causes the mixture to spread more easily over a surface. See SURFACTANT.

Wexford, county in SE Republic of Ireland, in Leinster province. The land is mostly low-lying but rises to the Blackstairs Mts in the W. The chief river is the Slaney. Wexford is primarily an agricultural county; wheat is the chief crop and cattle and pigs are raised. Fishing is an important industry. The county town is Wexford, a fishing port with food-processing industries. Area of county: 2,351sq km (908sq miles). Pop. (1979) 96,421.

Weyden, Rogier van der (c.1400–64), Flemish painter, among the most influential of the northern European artists of his era. It is believed that he studied at the workshop of Robert Campin in 1427, and left as an accredited master five years later. He was appointed city painter of Brussels in 1436 and pursued much of his career there, but in 1450 travelled to Italy, where his style was influenced by RENAISSANCE art. His painting is characterized by clear, subtly modulated colour. Dirk Bouts and Hans Memling were influenced by him.

Weygand, Maxime (1867–1965), French soldier. He was chief of staff to Foch (1914–23) and chief of staff to the army (1931–35). He lacked experience as a field commander, however, and handled his forces badly when he was French Commander-in-Chief during May 1940. He advised the French government to capitulate on 12 June and, after a period as a prisoner-of-war, held no more important posts.

Weyl, Herman (1885–1955), US mathematician, b. Germany. After holding professorships at Zurich and Göttingen universities he moved to Princeton University, USA, in 1933. His work on geometry and relativity led to a unified field theory in which the electromagnetic and gravitational fields appear as geometric properties of space-time. His *Group Theory and Quantum Mechanics* (1928) helped to form the modern views of QUANTUM THEORY.

Whale, any of several species of large aquatic mammals; it has a fish-like body with paddle-like flippers and the tail is flattened horizontally into flukes for locomotion. It spends its whole life in water, remaining submerged and returning to the surface at intervals of up to two hours to release waste carbon dioxide and to take in air; on the top of its head is a blowhole through which this exchange is made. Two main groups exist: toothed whales and baleen whales. Toothed

whales (Odontoceti) have simple teeth and feed primarily on fish and squid. They include the BOTTLE-NOSSED WHALE, KILLER WHALE, SPERM WHALE and BELUGA. Baleen whales (Mysticeti), including the RIGHT WHALE, BLUE WHALE and California grey whale, have no teeth but carry comb-like plates of horny material (whalebone) in the roof of the mouth. These form a sieve, through which the whales strain krill, tiny shrimp-like organisms on which they feed. The blue whale (*Sibbaldus musculus*) is the largest mammal that has ever lived; many specimens reach 30m (100ft) in length and weigh up to 100 tonnes. Species after species have been reduced to near extinction by man's overhunting. Order Cetacea. See also WHALING; pp.24, 100–101, 322, 339, 342, 348.

Whalebone. See BALEEN WHALES.

Whale shark, largest species of shark; it lives throughout the world in tropical waters. Brownish to dark grey with white or yellow spots and stripes, this docile, egg-laying fish often travels near the surface. Length: 9m (30ft). Family Rhincodontidae; species *Rhincodon typus*.

Whaling, industry that originated in the Middle Ages, and grew rapidly during the 18th and 19th centuries, of pursuing and catching whales for their oil. The modern whaling era began in the 1850s with the development of harpoons with explosive heads; after 1925 ocean-going factory ships were sent to the Antarctic. Since that time most larger whale species, including the blue whale, have been hunted to near-extinction. See also p.342.

Wharton, Edith Newbold Jones (1862–1937), US novelist, noted for her polished, ironic stories of New York society at the turn of the century. Her books include *The House of Mirth* (1905), *Ethan Frome* (1911) and *The Age of Innocence* (1920), which won the Pulitzer Prize in 1921.

What Every Woman Knows (1908), comedy by James M. Barrie about a woman who pushes her husband in his career and corrects his romantic indiscretions, without his realizing it.

Wheat, CEREAL grass originating in the Middle East. Cultivated there since 7000 BC it is now grown worldwide. It has long, slender leaves, hollow stems and flowering heads. *Triticum aestivum* is the large-grained variety used for BREAD, *T. durum* for PASTA and *T. compactum* for cake and pastry flour. Wheat is also used in the preparation of MALT, dextrose and ALCOHOL. Family Gramineae. See also pp.670–671, 676–679, 676–679, 700.

Wheat, small bird of the thrush family (Turdidae), common in open spaces in regions of Eurasia and Africa. It is conspicuous by its black wings and white rump. Length: about 15cm (6in). Genus *Oenanthe*.

Wheatley, Dennis Yates (1897–1977), British popular writer. He took up writing in the early 1930s, producing such works as *Forbidden Territory* (1933), *Black August* (1934) and *Traitor's Gate* (1958). Although he often wrote historical novels, he is chiefly remembered for his occult fiction, including *The Devil Rides Out* (1935) and *Strange Conflict* (1941).

Wheatley, Francis (1747–1801), British painter. He studied in London and lived in Dublin (1779–83), painting small portraits similar to those of the French painter GREUZE. He is best known for his series *Cries of London*, engraved in 1795.

Wheatstone, Sir Charles (1802–75), British physicist and inventor. In 1843, with W.F. COOKE, he improved the Wheatstone bridge, a device that accurately measures electrical resistance, which became widely used in laboratories. They also made major contributions to the electric TELEGRAPH.

Wheatstone bridge, electrical circuit used for measuring resistance, named after Sir Charles WHEATSTONE. It consists of four resistances arranged to form a square with an ELECTROMOTIVE FORCE (voltage from a battery) across one diagonal, and a GALVANOMETER across the other. When the galvanometer shows no deflection the ratio of the values of one adjacent pair of resistances equals the ratio of the values of

the other two. By adjusting the ratio of one pair (with a sliding contact along a wire which forms an adjacent pair of resistances) the unknown resistance of one of the other two can be calculated.

Wheel, circular structure which revolves evenly round its central axis. The wheel was first used during the BRONZE AGE, and spoked wheels were introduced c.2700 BC. First used for locomotion, wheels were being used by potters in the late Bronze Age.

Wheel and axle, machine based on the principle that a small force applied to the rim of a wheel will exert a larger force on an object attached to the axle. The MECHANICAL ADVANTAGE, or multiplication factor for the applied force, is the ratio of the radius of the wheel to that of the axle. See also pp.448, 448, 449.

Wheeler, Sir Charles (1892–1974), British sculptor. He is noted for portrait sculpture and decorative pieces, such as the JELICOE Memorial Fountain in Trafalgar Square. He was President of the ROYAL ACADEMY OF ARTS (1956–66) and was knighted in 1958.

Wheeler, Sir Robert Eric Mortimer (1890–1976), British archaeologist. He was Keeper and Secretary of the London Museum (1926–44) and became Professor of the Archaeology of the Roman Provinces at the University of London. His works include *Archaeology from the Earth* (1954) and his autobiography, *Still Digging* (1955).

Wheel-lock, mechanism invented in the early 16th century, used to ignite the explosive charge of a firearm. It consists of a steel wheel whose serrated edge protruded through the bottom of a pan. A dog-head vice, holding a piece of iron pyrites was lowered into the pan onto the wheel. Pressure on the trigger released the spring-loaded wheel and caused sparks which ignited the priming which ignited the charge. The wheel-lock replaced the MATCHLOCK and was itself replaced by the FLINT-LOCK. See also pp.556–557.

Wheel of life, Buddhist symbol of the process of reincarnation. The wheel, held by a monster, has at its centre the three basic evils: greed, desire and lust. Between the spokes are the states into which one can be reborn, and around the rim are depicted allegories of the phases of existence. See also p.1196.

Whelk, edible marine GASTROPOD MOLLUSC distributed worldwide on seashores. It has a large coiled shell, with a smooth rim and a notch at the lower end. Family Buccinidae. Length: 13–18cm (5–7in). See also pp.20, 334, 747, 747.

Whig Party, semi-formal parliamentary connection in Britain from the late 17th to the mid-19th century. The word Whig, meaning a Scottish cattle rustler or horse thief, was used by the TORY supporters of JAMES II to describe those politicians who wished to exclude the Duke of York from the throne. The Whig Party thus became those people who promoted the GLORIOUS REVOLUTION of 1688 and who applauded the HANOVERIAN SUCCESSION of 1714. Between 1714 and the accession of GEORGE III in 1760 Toryism was so discredited by its association with Jacobitism that every politician with an eye to office acknowledged himself to be a Hanoverian Whig, even in opposition to a Whig ministry. Then in the reign of George III Toryism gradually reasserted itself and Whiggism again took on a distinctive appearance and even, after 1783, a rudimentary party organization. Under the leadership of the Marquess of ROCKINGHAM, the Duke of PORTLAND and Charles and James FOX it became, broadly speaking, the party of religious toleration, opposition to slavery and parliamentary reform and, in it opposition to Toryism at least, the popular party. From the appointment of PITT as prime minister in 1783 to 1830 the Whigs (except for the brief ministry of the Talents) remained in opposition. They then returned to office under Lord GREY and passed the Great REFORM ACT of 1832. By the mid-19th century they had come to be replaced by, or known as, the Liberal Party. See also pp.1446–1447, 1462–1463, 1544–1545.

Whigs, one of the two major US political parties from 1834 to 1854. It was formed from the Federalist Party when John Quincy ADAMS and Henry Clay joined in opposition to Andrew JACKSON. It was a coalition party and had the support of eastern capitalists, western farmers and southern plantation owners. Its principal leaders were Henry Clay and Daniel WEBSTER. The party elected two presidents, William Henry Harrison in 1840 and Zachary TAYLOR in 1848. The issue of slavery split the Whigs, however, and the REPUBLICAN PARTY emerged from its disintegration in 1854. See also p.1628.

Whin. See GORSE.

Whinchat, small Eurasian thrush that commonly inhabits grassy coastal areas in England. It has a brown, mottled back with a white rump and distinctive red breast. The dark head is clearly marked by a white eye-stripe. Length: to 13cm (5in). Species *Saxicola rubetra*. See also p.75.

Whineray, Wilson James (1935–), New Zealand rugby union front-row forward. One of his country's greatest captains, he led the All Blacks in 30 of his 32 internationals from 1957 to 1965, a period when New Zealand were pre-eminent.

Whinfield, John Rex (1901–66), British chemist who, with John DICKSON, invented the synthetic fibre TERYLENE in 1941. His interest was stimulated by the discovery of nylon by W.H. CAROTHERS in 1935. In 1946 terylene was made in the USA and sold as Fibre V and then as Dacron, and in 1947 Imperial Chemical Industries (ICI) began to make and market it to the rest of the world. Whinfield received little recognition for his great invention, although he was awarded the CBE in 1954. **Whip**, government officer in Britain whose duty is to see that government supporters attend debates and vote in divisions. It is also the name for the notices which he sends to MPs. Government whips are Lords Commissioners of the TREASURY; the name "whip", is taken from the "whipper-in" at a fox hunt. There are also opposition whips.

Whippet, sporting dog that was originally bred in England for racing and hare coursing. It is capable of running at speeds of 56.5km/h (35mph). It has a long, lean head with a tapered muzzle and small ears thrown back and folded. The long-backed body with arched loin is set on lean, powerful legs and the long, tapering tail is carried low. Its close, smooth coat may be any colour. Height: to 56cm (22in) at the shoulder; weight: to 11kg (24lb).

Whipple, George Hoyt (1878–1976), US pathologist who shared the 1934 Nobel Prize in physiology and medicine with George R. MINOT and William P. MURPHY for his work on anaemia and its treatment with liver extract.

Whippoorwill. See NIGHTJAR.

Whipsnade Zoo, British zoo situated in the Bedfordshire countryside but administered by the Zoological Society of London. It covers about 200 hectares (500 acres) and was opened in 1931. It was the first of the world's major open-range zoos in which animals, often in herds, are housed in large paddocks and fields that to some extent match their natural surroundings.

Whirling dervish. See DERVISH.

Whisky, or whiskey, alcoholic spirit made by distilling fermented cereal grains. These sometimes give their name to the spirit, as in rye whiskey and corn (maize) whiskey or Bourbon, both made in the USA. Scotch whisky and Irish whiskey are both distilled from barley which has been allowed to sprout, then roasted and finally "mashed" and distilled. The unique flavour of Scotch whisky is partly contributed by the fumes of peat burned during the roasting process. See also pp.702, 702.

Whist, card game for four people playing as two pairs of partners. All 52 cards are dealt, the last card determining the trump suit. The aim is to collect tricks, won by the highest card of four played, one by each player. Every trick won after the first six wins a point. Points can also be won for honours (tricks won using all or three of the ace, king, queen and jack of one suit

dealt to one partnership). A game is won with five points, and a rubber is decided on the best of three games.

Whistler, James Abbott McNeill (1834-1903), us painter and etcher who lived mainly in England. Influenced early in his career by COURBET and VELAZQUEZ and later by Japanese woodblock prints, he worked in Paris and moved to London in 1859. His painting style became semi-abstract, combining subtle tonal relationships with a judicious arrangement of forms. His pictures, such as *Nocturne in Black and Gold* (1877) are characterized by serenity and aestheticism. He was an accomplished and prolific etcher, and produced some 400 plates. See also p.613.

Whistler, Reginald John ("Rex") (1905-44), British painter, illustrator and stage designer. He studied at the Slade School of Art, and excelled in a romantic rococo style of painting. His mural for the Tate Gallery restaurant is widely known.

Whistling thorn, species of ACACIA.

Whitby, town in N Yorkshire, England. The Synod of Whitby was held there in the abbey founded in 657, by St HILDA. It was an important fishing and shipbuilding port in the Middle Ages and in the 18th century the ship used by Capt. James Cook was built there. Pop. (1971) 12,717.

White, Edward Higgins II (1930-67), first us astronaut to walk in space. White and James McDivitt were launched in Gemini 4 in June 1965 and during the mission White spent 20 minutes outside the spacecraft. He was one of three astronauts killed when their spacecraft caught fire during a flight simulation of Apollo 1.

White, Gilbert (1720-93), British naturalist. He held curacies at Selbourne in Hampshire, and elsewhere, and devoted himself to the study of natural history around his parish. His famous *The Natural History and Antiquities of Selbourne* (1789) consists of letters to his fellow naturalists Thomas Pennant and Daines Barrington. It combines fresh and entertaining description with accurate observation.

White, John (fl. c.1590), European, probably English, artist and cartographer. While on a pioneering expedition (1585) to VIRGINIA he made numerous drawings and paintings, providing some of the earliest reliable records of the New World.

White, Patrick Victor Martin Sale (1912-), Australian novelist whose first book, *Happy Valley*, appeared in 1939. His novels are deeply concerned with the nature of morality, and its relationship to experience. They include *Voss* (1957), *Riders in the Chariot* (1961), *The Vicesector* (1970) *The Eye of the Storm* (1973) and *A Fringe of Leaves* (1976). In 1973 he became the first Australian to win the Nobel Prize in literature. See also p.1775.

White, Reginald James (1935-), British yachtsman who, with crew John Osborn, completely dominated the Tornado class at the 1976 Olympic Games to win the gold medal. One of the proponents of the Tornado as an international-class catamaran, he was also the Tornado world champion in 1976.

White, Terence Hanbury (1906-64) British author best known for his tetralogy *The Once and Future King* (1939-45), which he adapted into the successful Broadway musical *Camelot* (1960).

White ant. See TERMITES.

Whitebait, the young of several types of European HERRING, which is often eaten fried whole. Length: to 5cm (2in). The name is also given to a tropical marine fish found in Australian waters. This fish, *Galaxias attenuatus*, is elongated with its dorsal fin set far back. Family Galaxiidae. Length: to 10cm (5in).

Whitebeam, tree found in s and central Europe, particularly in mountainous regions. The undersides of the leaves have a white felt of hairs, and the scented flowers are dull white in colour. It bears bright red fruits. Species *Sorbus aria*.

White blood cell. See LEUCOCYTE.

Whiteboys, members of illegal agrarian groups (usually ROMAN CATHOLIC) in 18th-century Ireland, particularly in

Munster. They were first organized (c.1760) to protest against land enclosure and tithe collecting and their name derives from their white disguises. Protestant counterparts existed in ULSTER. Their early raids were suppressed by 1765, but outbreaks recurred during periods of agricultural hardship until 1800. In the 19th century they were replaced by other secret societies, such as the Molly Maguires.

White currant, small shrub and its round, seedless berry, less acid than the red or black currant. It is now grown in Europe, Asia and North America, and may be made into preserves or dried. Family Grossulariaceae; genus *Ribes*. See also p.710.

White dwarf star, faint hot star of planetary dimensions but with a mass comparable to that of the Sun. It results from the gravitational collapse of a star that is not massive enough to have become a SUPERNOVA. White dwarfs represent the last stage in the evolution of stars like the Sun which, having exhausted their fuel, contract under their own weight to become a million times denser than water, and cool to become cold dark globes. They are found on the bottom left of the HERTZSPRUNG-RUSSELL DIAGRAM. See also pp.978-981.

White-eye, small greenish bird of Old World tropical forests with a prominent ring of white feathers around the eyes. It has short, rounded wings, a squarish tail, a straight, pointed bill and a brush-tipped, extensible tongue for feeding on nectar. It also eats insects and fruit. Length: to 12.5cm (5in). Family Zosteropidae.

White Fang (1906), novel by JACK LONDON. Offspring of an Indian wolf-dog and a wolf, White Fang is sold to an unscrupulous owner who ill-treats him to make him even more savage. He is rescued and treated with kindness by his new owner. White Fang almost dies while saving his new home from an attack by an escaped convict.

White Fathers, unofficial name for the Society of Missionaries of Africa, a Roman Catholic society founded in 1868 by Cardinal Charles Lavigerie, Archbishop of Algiers. Its missionaries wear white tunics.

Whitefield, George (1714-70), British evangelist. He preached in the American colonies 1739-41 and was immensely successful because of his great oratorical powers. In London he emerged as leader of the Calvinistic Methodists in 1741, after breaking with John Wesley.

Whitefish, also called cisco or lake herring, any of several species of freshwater food fish that live, often in deep waters, in Eurasia and the USA. It is silvery, with large scales and a small mouth. Length: to 150cm (59in); weight: to 29kg (63lb). Family Salmonidae. See also p.997.

White friars. See CARMELITES.

Whitehall, street in London running from Parliament Square to Trafalgar Square. It is the site of the principal government offices including the FOREIGN OFFICE, the HOME OFFICE and the TREASURY. Whitehall Palace, from the time of HENRY VIII to its destruction by fire in 1698, was the London residence of the monarchy. Inigo Jones's Banqueting House (1622), in front of which CHARLES I was executed, and the HORSE GUARDS Parade are also in Whitehall.

Whitehall farces, series of situation comedies at the Whitehall Theatre, London, in the 1950s and 1960s. The plays, under the direction of the actor Brian Rix, were *Reluctant Heroes* (1950-54), *Dry Rot* (1954-8), *Simple Spymen* (1958-61), *One for the Pot* (1961-4), *Chase Me, Comrade!* (1964-6) and *Come Spy with Me* (1966).

Whitehead, Alfred North (1861-1947), British philosopher and mathematician. He attempted to combine his interests in mathematics, morals and aesthetics into a comprehensive metaphysical system of scientific cosmology. This system is presented in his *Process and Reality* (1929). His *Principia Mathematica* (3 vols, written in collaboration with Bertrand Russell, 1910-13) has had a notable influence on contemporary philosophy. Other works include *Science and the*

Modern World (1925) and *Adventures of Ideas* (1933). See also pp.1882, 1886-1887.

White hole, hypothetical localized point in space at which matter is suddenly created with explosive violence. It can be considered as being similar to a BLACK HOLE with time reversed. The cosmological BIG BANG is an analogous phenomenon that embraced the whole universe rather than being localized.

White Horse, Vale of the. See VALE OF THE WHITE HORSE.

White House, official residence of the President of the US in Washington, DC. It was designed in the NEO-CLASSICAL style by James Hoban in 1792 and completed in 1800. After being burned down during the British invasion in 1814, it was rebuilt and the porticoes were added in the 1820s. It derives its name from the limestone used, later painted white.

Whiteley, Brett (1939-), Australian painter. After studying in Sydney, he went to Europe on an Italian government scholarship in 1960 and settled in London in 1961. His paintings incorporate some of the devices of POP ART and he has also worked with screenprints in such works as *Drawing about Drawing* (1965).

Whiteman, Paul (1890-1967), us band-leader. He formed an orchestra after WWI which used jazz rhythms and employed jazz soloists such as Bix Beiderbecke to found a popular style known as "symphonic jazz". He also commissioned and gave the first performance of various jazz-influenced orchestral pieces, such as George Gershwin's *Rhapsody in Blue* (1924).

White Nile, main branch, about 800km (500 miles) long, of the River Nile in NE Africa. It starts at Malakal, flows N, and continues through the Sudan to Khartoum, where it joins the BLUE NILE to form the River Nile.

White Plains, city in SE New York State, USA. New York's provincial congress met there in 1776 to ratify the Declaration of Independence. During the American War of Independence, the city was the scene of a battle in which the American army was defeated by the British. A largely residential city, White Plains has light industries. Pop. (1976) 47,736.

White Russia. See BELORUSSIA.

White Sea, large inlet of the Barents Sea on the N coast of the USSR between the Kola Peninsula (W) and the Kanin Peninsula (E). The Mezen, Northern Dvina and Onega rivers drain into it and it is connected to the Baltic Sea by a canal system. Its chief port is ARCHANGEL, which is kept open by icebreakers from Nov. to May. The White Sea is rich in herring and cod and has seal herds. Area: 95,000sq km (36,680sq miles).

White shark, also called great white shark, aggressive shark found throughout the world in tropical and subtropical waters; it is widely regarded as the most dangerous of sharks. It has a heavy solid body, a crescent-shaped tail and saw-edged triangular teeth; it is grey, blue or brown with a white belly. Length: to 11m (36ft); weight: to 2,180kg (7,000lb). Family Isuridae; species *Carcharodon carcharias*.

White slave trade, traffic in women and children to supply enforced prostitution. The movement to suppress it began with the protests against the 1864 Contagious Diseases Prevention Act in Britain (repealed 1886). Josephine Butler founded the British, Continental and General Federation for the Abolition of Government Regulation of Prostitution, later known as the International Abolitionist Federation, which held its first world conference in Geneva in 1877. Since then a host of organizations, some sponsored by the League of Nations and the UN, have attempted to eliminate it.

Whitethroat, small bird of the warbler family (Sylviidae). It breeds in undergrowth in W Eurasia and NW Africa and winters in Africa and India. It has drab brown plumage with red-brown wing patches, a long white-edged tail and a white throat. Length: 13cm (5in). Genus *Sylvia*. See also p.78.

White whale. See BELUGA.

Whitgift, John (c.1530-1604), English churchman who became Archbishop of Canterbury. He was ordained in 1560, became professor of divinity at Cambridge in 1567, Bishop of Worcester in 1577 and Archbishop of Canterbury in 1583. He imposed unity on the recently established Anglican Church, although at the cost of alienating the PURITANS. See also pp.1405, 1405.

Whiting, John (1917-1963), British actor and playwright. His plays include *A Penny for a Song* (1951) and *Gates of Summer* (1956). The ROYAL SHAKESPEARE COMPANY commissioned him to dramatize Aldous Huxley's *The Devils of Loudon* as *The Devils* (1961), which achieved great success.

Whiting, name given to several unrelated food fish. The European whiting (*Merlangius merlangus*) is a haddock-like fish of the cod family, Gadidae. It is found primarily in the North Sea, where it feeds on invertebrates and small fish. It is silver with distinctive black markings at the base of the pectoral fin. Length: to 70cm (28in). Other fish commonly called whittings include the kingfish, *Menticirrhus saxatilis*, and the freshwater WHITEFISH, *Coregonus clupeaformis*. See also pp.63, 744, 744.

Whitlam, Edward Gough (1916-), Australian politician. Formerly a barrister, Whitlam was elected to the House of Representatives in 1952 and became leader of the parliamentary Labor Party in 1967. He was elected Prime Minister in 1972, but in 1975 his Government was dismissed by the Governor-General, an action unprecedented in Australian political history. In December 1977, after a crushing defeat in the general election, Whitlam announced his resignation from the Labor Party leadership.

Whitman, Walter ("Walt") (1819-92), us poet and essayist. His collection of poems, *Leaves of Grass* (1855), is now considered a classic of American literature, but when it was first published it received little acclaim. His other works include *Drum-Taps* (1865) and *Sequel to Drum-Taps* (1865), both included in a later edition of *Leaves of Grass*, and a collection of essays, *Democratic Vistas* (1871) and *Two Rivulets* (1876). His last book was *November Boughs* (1888).

Whitney, Eli (1765-1825), us inventor of the COTTON GIN (1793), which could clean cotton as quickly as 50 manual pickers. He began producing the machines but demand outstripped production and soon others were manufacturing gins even before he was granted sole right to his patent in 1807. In 1812 he was denied permission to renew it. Meanwhile, he had also set up the first mass production factory in the USA, manufacturing muskets using unskilled workers assembling interchangeable parts. See also p.592.

Whitsun. See PENTECOST.

Whitten-Brown, Sir Arthur. See BROWN, SIR ARTHUR WHITTEN.

Whittingham, name of two British printers. Charles Whittingham (1767-1840) founded the Chiswick Press in London in 1810 and was one of the first to issue classics in cheap reprints. His nephew, also Charles Whittingham (1795-1876), carried on the business, reviving older type-faces such as Caslon's Old-style type (1844). He later printed several of William Morris's works.

Whittington, Richard ("Dick") (c.1358-1423), English merchant. The son of a knight, he became wealthy dealing in fine cloths and was Lord Mayor of London (1397-99; 1406-07; 1419-20). He made loans to Henry IV and Henry V and endowed many charitable institutions. He is, however, best known as the subject of a legend and pantomime (probably dating from the early 17th century) about a poor boy who makes his fortune with the aid of his cat.

Whitworth, Sir Joseph (1803-87), British engineer. After learning engineering in Manchester, he went to London, where he invented a technique for making perfectly flat metal surfaces. He returned to Manchester, where he produced extremely

Who, The

accurate machine tools. A system of threads for nuts and bolts is named after him.

Who, The, British rock group. Originally achieving fame in the mid-1960s as a "mod" group, with a recording of Slim Harpo's *Got Love if you want it* (re-titled *I'm the Face*, 1964), The Who maintained their popularity despite the Mods' decline and later made a retrospective record dealing with the period, *Quadrophenia* (1974). Their most famous work is *Tommy* (1968), a rock opera later filmed by Ken Russell.

Wholesaling, marketing activity in which goods are bought and sold by the whole piece or in relatively large quantities. Generally a wholesaler buys directly from a manufacturer and sells to retailers, to other manufacturers, to institutional and commercial users but not normally to the ultimate consumer.

Whooping cough, or pertussis, acute, highly contagious childhood respiratory disease. It is caused by the bacteria *Bordetella pertussis* and marked by spasms of coughing, followed by a long-drawn intake of air, or "whoop", frequently ending with vomiting. Severe attacks can last up to six weeks and serious complications used to be common. Now, immunization VACCINATIONS can be administered to infants.

Whortleberry. See **BILBERRY**.

Whymper, Edward (1840-1911), British mountaineer and wood-engraver. In 1860-69 he conquered many previously unscalped mountains in the ALPS, including the MATTERHORN. He travelled extensively between 1879 and 1880 in the ANDES and made an ascent of CHIMBORAZO. His written works include *Scrambles amongst the Alps* (1871, 1893).

Whyte, Ian (1901-60), Scottish conductor and composer. A pupil of VAUGHAN WILLIAMS, he was chief conductor of the BBC Scottish Symphony Orchestra from 1946. He wrote operas, cantatas and several orchestral works, including the ballet music *Donald of the Buthens* (1951), of which a part is scored for bagpipes, and edited a collection of old Scottish music.

Wiata, Inia Te. See **TE WIATA, INIA**.

Wickham, Sir Henry (1846-1928), British explorer and pioneer of rubber-planting. He established the rubber industry of the Far East by importing seeds from Brazil.

Wicklow, county in E Republic of Ireland, in Leinster province. The terrain is dominated by the Wicklow Mts, but there are fertile lowland areas. The Liffey, Slaney and Avoca are the chief rivers. Sheep and cattle are reared and cereals are grown. Low-grade copper ores are mined and the hill and lake scenery attract many tourists. Wicklow is the county town. Area: 2,025sq km (782sq miles). Pop. (1979) 83,950.

Wicksteed, Philip (1884-1927), British economist who was the first to use Leonard Euler's mathematical theorem to show that, with a particular kind of production function, it is possible to pay each input in accordance with its productivity.

Widerberg, Bo (1930-) Swedish film director and writer. He criticized the influence of Ingmar BERGMAN on Swedish film-making and produced a series of films before *Elvira Madigan* (1967) brought him to the attention of audiences outside Sweden. Other films include *Adalen '31* (1969) and *The Ballad of Joe Hill* (1969).

Wide screen cinema, cinematic process adopted in the 1950s, largely in an attempt to win back audiences from television. Inventions such as Polyvision had appeared as early as the 1920s but the first film made in Cinemascope was *The Robe* (1956). There has been several other developments, including Cinemascope, Vistavision and Technirama; the most successful of which has been Panavision.

Widgeon, river duck with mainly brownish plumage. It feeds on the surface of the water and engages in complex courtship displays. Species include the North American *Mareca americana* and European *Mareca penelope*.

Widmanstätten patterns, lines surrounded by dark bands found in the class of

METEORITES called siderites (composed entirely of metal). They are formed when the liquefied outer surface of a meteorite cools on entering the Earth's atmosphere, and can be used to determine the meteorite's motions in flight. They appear when the meteorite is treated with nitric acid.

Widor, Charles Marie (1844-1937), French organ virtuoso, composer and teacher. Much of his career was spent as organist at St Sulpice, Paris (1870-1934), and from 1890 he was professor of organ and later of composition at the Paris Conservatoire. He composed many organ works, of which the best known are ten large scale works for the instrument which are termed "symphonies".

Wieland, Christoph Martin (1733-1813), German novelist and poet. His works express his sensuality, and include prose translations of 22 of SHAKESPEARE's plays and the novels *Agathon* (1766), *Peregrinus Proteus* (1791), *Aristipp* (1801), *Der goldene Spiegel* (1772), a verse idyll, *Musarion* (1768), and *Oberon* (1780). He later went to Weimar as a tutor to the duke, where he edited the influential *Der teutsche Merkur*. See also p.1549.

Wieland, Heinrich Otto (1877-1957), German chemist who was awarded the 1927 Nobel Prize in chemistry for his research into BILE acids. In 1912 he discovered that the three bile acids then known were closely related in structure. He showed them to have a STEROID skeleton and thus found that they were also structurally related to CHOLESTEROL. He also did research into oxidation reactions occurring in living tissues and discovered that such oxidation consisted of dehydrogenation (removal of hydrogen atoms), not the addition of oxygen.

Wien, Wilhelm (1864-1928), German physicist who was awarded the 1911 Nobel Prize in physics for his work on radiation. He investigated the radiation from black bodies and, in 1893, calculated that the peak frequency radiated increases with temperature. This is called Wien's displacement law and holds only for high frequencies.

Wien. See **VIENNA**.

Wiener, Norbert (1894-1964), US mathematician and originator of CYBERNETICS. He contributed much to the study and development of COMPUTERS and feedback mechanisms. His mathematical model of BROWNIAN MOVEMENT established information theory. His book *The Human Use of Human Beings* (1950) was of key importance and his formulation of ENTROPY is still current.

Wiesbaden, city in central West Germany, on the River Rhine, 32km (20 miles) w of Frankfurt am Main; capital of Hessen State. Founded in the 3rd century BC, the city was later a Roman spa town. It is still famous for its mineral springs. Wiesbaden became a free imperial city c.1241 and capital of the duchy of Nassau from 1806 to 1866, when it passed to Prussia. The city was taken by Allies during WWII. Industries: tourism, metal goods, chemicals, plastics, printing. Pop. (1979 est.) 273,267.

Wigan, county district in W GREATER MANCHESTER, England; created in 1974 under the Local Government Act (1972). Area: 199sq km (77sq miles). Pop. (1979 est.) 311,200.

Wiggin, Kate Douglas (1856-1923), US novelist and educationalist, b. Kate Douglas Smith. She opened the first free kindergarten school on the Pacific Coast in San Francisco in 1878. Her writings include kindergarten training literature, but she is best known for her children's books, *Rebecca of Sunnybrook Farm* (1903) and *Mother Carey's Chickens* (1911).

Wight, Isle of. See **ISLE OF WIGHT**.

Wightman Cup, annual competition between teams of women tennis players from the USA and Britain. The trophy was donated by the US player Hazel Hotchkiss Wightman, and the competition first held in 1923. It consists of five singles and two doubles matches. Up to 1982, the USA had won the Cup 43 times, Britain nine times.

Wigner, Eugene Paul (1902-), us phys-

icist who worked during WWII on the Manhattan Project, which developed the first atomic bomb. Wigner was the first physicist to apply GROUP THEORY TO QUANTUM MECHANICS. With this technique he discovered the law of conservation of parity. Wigner shared the 1963 Nobel Prize in physics, with Johannes JENSEN and Maria Goeppert MAYER, for his work on the structure of the atomic nucleus.

Wigtownshire, former county in SW Scotland; since 1975 it has been part of STRATHCLYDE region. Much of the land is hilly moorland. The chief economic activity is the rearing of sheep, cattle and pigs. Most of the population are engaged in farming or the processing of farm produce, and the manufacture of agricultural machinery. The county town was Wigtown. Area: 1,261sq km (487sq miles). Pop. (1971) 27,341.

Wigwam, shelter used by North American Indians of the E woodlands area of the USA. They were made from bark, reed mats or thatch spread over a pole frame, and should not be confused with the conical, skin-covered tepees of the Plains Indians.

Wilberforce, William (1759-1833), British social reformer, and MP for more than 40 years. In 1784 he was converted to Evangelical Christianity. His strong and outspoken opposition to the slave trade led to its abolition in the West Indies in 1807. See also pp.1493, 1613, 1617.

Wilbur, Richard Purdy (1921-), US poet. His collections of poetry include *Things of This World* (1956). His other works include *Advice to a Prophet* (1961) and translation of Molière's *The Misanthrope and Tartuffe*.

Wilcox, Ella Wheeler (1850-1919), US poet. She contributed verses to US magazines from the age of seven, but became famous for her *Poems of Passion* (1883).

Wilcox, Sheila (1936-), British horse trials rider who, until breaking her back in 1971, was Britain's finest female rider. She was European champion in 1957, and is the only rider to have won the Badminton trials in three consecutive years (1957-59).

Wild, Jonathan (c.1682-1725), English criminal. He formed a gang of thieves and set up a highly successful organization for the disposal of stolen property. To try and remain on good terms with the authorities, Wild informed on dissident members of his own group as well as on non-members. He was eventually hanged at Tyburn.

Wild boar, tusked, cloven-hoofed mammal of the pig family that lives wild in forested areas of Eurasia and Africa. Length: to 1.8m (6ft); weight: to 200kg (450lb). Family Suidae; species *Sus scrofa*. See also p.304.

Wilde, Jimmy (1892-1969), Welsh flyweight boxer who won the world title in 1916 and held it until 1923. Nicknamed "the ghost with the hammer in his hand", he won 126 of his 140 officially recorded professional fights, many against men heavier than his 7st 10lb and 77 inside the distance.

Wilde, Oscar Fingal O'Flahertie Wills (1854-1900), Irish dramatist and wit. He was the leader of the aesthetic cult of the 1880s. His plays *Lady Windermere's Fan* (1892), *A Woman of No Importance* (1893) and *An Ideal Husband* (1895) were light social comedies. His masterpiece, *The Importance of Being Earnest* (1895), was a brilliant, epigrammatic comedy. Wilde was convicted of homosexual practices in 1895 and sentenced to two years' hard labour. While in prison he wrote *The Ballad of Reading Gaol* (published in 1898), a rhetorical poem; a prose apologia *De Profundis* (1905) was later published. He wrote one novel, *The Picture of Dorian Gray* (1891). See also p.1577.

Wildebeest. See **GNU**.

Wilder, Billy (1906-), US film director. He began as a scriptwriter in Berlin but left after Hitler's rise to power. He went to HOLLYWOOD in the mid-1930s and worked with Ernst LUBITSCH on *Ninotchka* (1939). As a writer and director he subsequently made a series of films, such as *Seven Year Itch* (1955), *Some Like it Hot* (1959) and *Front Page* (1974). Others dealt realisti-

cally with tragic and shocking situations, such as *The Lost Weekend* (1945) and *Sunset Boulevard* (1950).

Wilder, Thornton Niven (1897-1975), US novelist and playwright. He received the Pulitzer Prize for his novel *The Bridge of San Luis Rey* (1927) and for two plays, *Our Town* (1938) and *Skin of Our Teeth* (1942). His *The Matchmaker* became the popular musical *Hello Dolly* (1963).

Wilfrid, or Wilfred, Saint (c.634-c.709), Anglo-Saxon bishop. He devoted his career to establishing close links with Rome, and to rejecting Celtic practices in favour of Roman ones. From 705 he was Bishop of Hexham.

Wilhelm, name of two emperors of Germany and kings of Prussia. Wilhelm I (1797-1888) was King of Prussia from 1861, and Emperor of Germany from 1871 after the FRANCO-PRUSSIAN WAR. In 1862 he appointed BISMARCK Prime Minister, and the latter dominated German politics during the rest of the reign. Wilhelm II (1859-1941) became Emperor of Germany and King of Prussia in 1888. He forced Bismarck to resign in 1890, and took a prominent part in international affairs, contributing to the tension which led to WWI. He was forced to abdicate in 1918 and remained in exile in The Netherlands until his death. See also pp.1588, 1589, 1664, 1666, 1666-1667.

Wilhelmina (1880-1962), Queen of The Netherlands (r.1890-1948). She succeeded her father, William III, helped to keep the country neutral in WWI and gave the Kaiser asylum after the war ended. When Germany invaded in WWII she took her government into exile to England, returning in 1945. In 1948 she abdicated in favour of her daughter JULIANA.

Wilkes, Charles (1798-1877), US explorer and admiral who is credited with discovering the Antarctic continent in 1838-42. Wilkes Land is named after him.

Wilkes, John (1727-97), British politician. An MP from 1757, he criticized the king and government in his newspaper *North Briton* in 1763. Although arrested and expelled from Parliament for his libels, he was re-elected in 1768 and three times in 1769, despite repeated expulsions. He won radical support and became lord mayor of London in 1774. He was again elected an MP in 1774, but lost popularity for his suppression of the GORDON RIOTS (1780). The controversy surrounding Wilkes was influential in the movement for parliamentary reform and press freedom. See also p.1545.

Wilkie, Sir David (1785-1841), Scottish genre painter who worked in London and became popular with his scenes of everyday life. He later turned to portrait and historical painting and became painter-in-ordinary to George IV. Well-known examples of his work include *Pittessie Fair* (1804) and *The Village Festival* (1811). See also pp.1475, 1594, 1594.

Wilkie, David (1954-), Scottish breast-stroke swimmer, b. Sri Lanka. Silver medalist in the 1972 Olympic Games 200m breaststroke, he went on to win three world, two European, and two Commonwealth gold medals before crowning his career with a gold in the 200m and a silver in the 100m at the 1976 Olympic Games.

Wilkins, Sir George Hubert (1888-1958), British explorer, photographer, aviator and geographer. He was knighted in 1928 for a flight over the Arctic of a distance of 3,380km (2,100 miles) with a co-pilot, and later did much to develop the use of aeroplanes for polar exploration. He also commanded the submarine HMS *Nautilus* in the Arctic Ocean in 1931 to the latitude 82°15'N.

Wilkins, Maurice Hugh Frederick (1916-), British biophysicist. He shared the 1962 Nobel Prize in physiology and medicine with James D. WATSON and Sir Francis CRICK for his X-ray DIFFRACTION studies which helped to determine the molecular structure of deoxyribonucleic acid (DNA).

Wilkins, William (1778-1839), British architect who spent four years travelling in Italy, Greece and Asia Minor. On his return to Britain he pioneered the Greek

revival in architecture with his designs for Downing College (1804), Cambridge, and Haileybury College (1806). His other works include the National Gallery (1832–38) and St George's Hospital (1827), both in London.

Wilkinson, Professor Sir Geoffrey (1921–), British chemist; awarded in 1973, with Ernst Fischer, the Nobel Prize in chemistry for his work on organometallic compounds. He was appointed professor of inorganic chemistry at Imperial College, London, in 1956.

Will, in law, a clear expression of intent by a person (the testator) concerning the disposal of his effects after death. The testator must be of sound mind and legal age, and the will must be witnessed by two competent people who are not beneficiaries. It may be altered or revoked by the testator at any time, with due legal process. In Britain, most of the laws governing the execution of wills are contained in the Wills Act of 1837.

Willemstad, capital city of the Netherlands Antilles, on Curaçao Island, West Indies. The city is a free port exporting oil from Venezuela; coffee is also exported. Oil refining and tourism are the major industries. Pop. (1970) 50,000.

Willendorf, Venus of. See VENUS FIGURES.

William I (the Conqueror) (c. 1027–87), King of England (1066–87), and Duke of Normandy. He was the illegitimate son of Robert I of Normandy, and was unwillingly accepted as Robert's heir, succeeding to the Dukedom of Normandy in 1035. Supported initially by HENRY I, King of France, he consolidated his position in Normandy against hostile neighbours throughout the 1050s and expanded his territory in 1063. Having apparently been designated EDWARD THE CONFESSOR's successor as King of England, William secured the agreement of Harold, Earl of Wessex, to his accession. Harold's assumption of kingship was the cause of William's invasion of England and the ensuing Battle of HASTINGS in 1066. He crushed all internal resistance but spent most of his reign in France, returning to England only when necessary. He established stable government through astute land distribution and by instituting the FEUDAL SYSTEM in England. The DOMESDAY BOOK (1086) was compiled during his reign. See also pp.1300–1302.

William II (c.1056–1100), King of England (1087–1100), second surviving son of William I. Known as Rufus because of his ruddy complexion, he was of a brutal temperament and his rule in England, although stable, was repressive. See also pp.1302, 1302, 1330, 1794, 1794.

William III, or William of Orange (1650–1702), Prince of Orange, King of England, Scotland and Ireland (1689–1702). Born eight days after the death of his father, WILLIAM II, he was prevented from succeeding him as Stadholder of Holland until 1672. From then he devoted his life to opposing the expansion of France under LOUIS XIV. He married Mary, daughter of the Duke of York (later JAMES II of England), in 1677. Following the GLORIOUS REVOLUTION in 1688, he and Mary replaced James II and ruled jointly until her death in 1694. Using English resources, William carried on his struggle against France, and prepared the alliance which defeated Louis in the War of the SPANISH SUCCESSION. See also pp.1427, 1427, 1431, 1446, 1446, 1447, 1449, 1469, 1469, 1794, 1794.

William IV (1765–1837), King of Great Britain and Ireland (1830–37), and of Hanover (1830–37). The third son of GEORGE III, he at first pursued a naval career, obtaining the rank of rear admiral in 1790. He became Duke of Clarence and St Andrews in 1789. He took as mistress the actress Dorothea JORDAN, and they had several children before he broke with her, in 1811. He succeeded his brother GEORGE IV and was himself succeeded by his niece VICTORIA. See also p.1795.

William I and II (of Germany). See WILHELM.

Willelm, name of three kings of The Netherlands and Grand Dukes of Luxembourg. William I (1772–1843; r. 1815–40)

commanded the Dutch forces in the FRENCH REVOLUTIONARY WARS (1793–95). He was first ruler of the Kingdom of The Netherlands. Despite granting a liberalized constitution, he could not truly unite Belgium and Holland and finally signed the Treaty of Separation in 1839. He abdicated in favour of his son William (1792–1849; r. 1840–49). William II fought France during the NAPOLEONIC WARS and against the Belgian rebels in 1830. He secured a liberal constitution in 1848. William III (1817–90; r. 1849–90) was a conservative monarch, who accepted the constitution of 1848 unwillingly. The male line of Orange ended with his death, and his daughter WILHELMINA succeeded him.

William, name of two Norman kings of Sicily. William I, "the Bad" (1120–66; r. 1154–66), was the son and successor of ROGER II. He defeated Byzantine forces in Italy (1155), concluded peace with the papacy (1156) and repressed baronial conspiracies with great ruthlessness (1160–61), gaining thereby his nickname. William II, "the Good" (1154–89; r. 1166–89), was under a regency from 1166–71. In contrast to his father, he maintained good relations with the nobility. He failed in attempts to extend his territories into N. Africa and Greece. See also pp.1281, 1305.

William I (1143–1214), King of Scotland (r. 1165–1214), called "the Lion", successor to his brother Malcolm IV. He rebelled against HENRY II of England but was forced to swear fealty to him, although he bought back his independence from RICHARD I for 10,000 marks in 1189. He established an independent Church responsible only to the see of Rome and not to Canterbury. See also p.1316.

William I (the Silent) (1533–84), Prince of Orange and one of the founders of the Dutch Republic. He was one of the great lords of The Netherlands and led a growing opposition to the intolerant Spanish rule, which culminated in the War of Independence from 1568. In the face of immense difficulties, William managed to unite the Calvinist northern provinces and was recognized as the first stadholder in 1579. He was later assassinated by a Catholic fanatic. See also p.1406.

William II (1626–50), Prince of Orange, Stadholder of The Netherlands (1647–50). He succeeded his father, Frederick Henry, and married Mary, daughter of CHARLES I of England in 1650. He came into conflict with leaders of the states-general and imprisoned some of them in 1650, thus weakening the state-rights movement. He was succeeded by his son WILLIAM III, who became King of England in 1689.

William of Malmesbury (c. 1095–c. 1143), English historian who was librarian at Malmesbury Abbey. His most important work is the *Gesta Regum Anglorum*, a history of English kings from 449–1126, and its continuation, the *Historia novella*, which carries the narrative to 1142. He also wrote the *Gesta pontificum*, a source of reference for early ecclesiastical history. See also p.1328.

William of Occam. See OCCAM, WILLIAM OF.

William of Sens (d. 1180), French architect. He was master mason of the chancel of CANTERBURY Cathedral, rebuilt after a fire in 1174. In 1175 he started work there but was thrown from a scaffold in 1179 and was forced to abandon it. See also p.1332.

William of Wykeham (1324–1404), English bishop and politician. He had a varied career, becoming Lord Chancellor in 1367 under Edward III but being deprived of his offices in 1373 because of his opposition to John of Gaunt. In 1389 he was pardoned by Richard III and reinstated as Chancellor until his retirement in 1391. Wykeham was Bishop of Winchester from 1367, and founded New College, Oxford, and Winchester School.

William of Wynford (died c. 1405–10), English architect. He was master mason of Wells Cathedral in 1365 and protégé of WILLIAM OF WYKEHAM, for whom he

worked at Winchester College and Winchester Cathedral.

Williams, Andy (1930–), us popular singer. He starred in his own television show from 1959 onwards and his many records include *Happy Heart* (1969) and *Can't get used to losing you* (1963).

Williams, Daniel Hale (1858–1931), us surgeon who organized the Provident Hospital, the first for Negroes in the USA. He performed (1893) the first successful closure of a heart wound and from 1899 was professor of clinical surgery at Meharry Medical College at Nashville.

Williams, Elizabeth Mary (1943–), peace organizer from Northern Ireland. She was instrumental in forming the Irish PEACE MOVEMENT (1975), an organization aimed at a non-military solution to the political crisis in Northern Ireland. Together with Mairead Corrigan she organized a women's peace march through Belfast in August 1976. Both women shared the 1976 Nobel Peace Prize.

Williams, Emyln (1905–), Welsh dramatist and actor. His plays include *Night Must Fall* (1935) and *The Corn is Green* (1938). He appeared in many of his own plays, and in 1951 had a great success playing CHARLES DICKENS in a series of readings from Dickens' novels.

Williams, Eric Eustace (1911–), Prime Minister of Trinidad and Tobago from 1962. He was a respected scholar and in 1956 became founder-leader of the People's National Movement (PNM), the island's first genuinely modern political party. Six years later he led his country to independence. See also p.1613.

Williams, Sir George. See YMCA.

Williams, Grace (1906–77), Welsh composer who studied with VAUGHAN WILLIAMS and Wellesz. She has written orchestral works, concertos, the opera *The Parlour*, and Welsh folk-songs.

Williams, John (1941–), Australian lutenist and guitarist who settled in Britain. He studied with his father (also a guitarist), with Andrés SEGOVIA, and at the Royal College of Music.

Williams, John Peter Rhys (1949–), Welsh rugby union fullback. A member of the London Welsh club and Bridgend, he became Wales's regular fullback after 1969, winning 41 caps up to 1977; he toured New Zealand (1971) and South Africa (1974) with the British Lions.

Williams, Sir Owen (1890–), British architectural engineer, whose functional, streamlined use of REINFORCED CONCRETE influenced modern British architecture. His works include Boots' Pharmaceutical Factory, Beeston, Nottinghamshire, (1932) and the Empire Pool, Wembley, Middlesex (1934).

Williams, Ralph Vaughan. See VAUGHAN WILLIAMS, RALPH.

Williams, Roger (c. 1603–83), advocate of religious freedom and founder of the us state of RHODE ISLAND, b. London. He founded Providence, the earliest settlement on Rhode Island in 1636 on land purchased from Nanagansett Indians. Williams obtained a patent for Rhode Island, allowing full religious freedom (1644) and thereafter the colony served as a refuge from religious persecution.

Williams, Thomas Lanier ("Tennessee") (1911–), us playwright. His first Broadway play *The Glass Menagerie* (1944) was awarded the New York Drama Critic's Circle Award. He received the Pulitzer Prize for *A Streetcar Named Desire* (1947) and *Cat on a Hot Tin Roof* (1955). Many of his plays were set in the South, and some have been made into films.

Williams, William ("Pantycelyn") (1717–91), Welsh Methodist leader. He adopted the Methodist custom of itinerant preaching in unconsecrated places though he considered himself a "minister of the Church of England". He wrote more than 800 hymns, including the one translated from the Welsh as *Guide me, O Thou Great Jehovah*.

Williams, William Carlos (1883–1963), us poet and practising physician. He is regarded as one of the founders of the Objectivist school. His poems are about everyday life. See also p.1773.

William the Conqueror, the most powerful feudal lord in England in the Middle Ages.

Betty Williams, Ulster Peace Movement leader, speaking at a UN luncheon.

Emyln Williams abridges stories and novels by the British author, Charles Dickens.

Tennessee Williams, relaxing in a hotel room between appointments.

Williamson, Alexander William

Ted Willis, creator of the British television policeman, "Dixon of Dock Green".

Willow pattern shows the story of two lovers turned into birds by the kindly gods.

Richard Wilson's Foundling Hospital (1746); he was a founder of the Royal Academy.

Wimbledon's croquet lawns were made into tennis courts as tennis prospered.

Williamson, Alexander William (1824–1904), British chemist who first clarified the relationship between ETHERS and ALCOHOLS in 1850. He also produced the first mixed ether, which contains two different organic radicals.

Williamson, Henry (1895–1977), British novelist. Chiefly famous for his unsentimental animal stories such as *Tarka the Otter* (1927) and *Salar the Salmon* (1935), he also wrote the series of novels *A Chronicle of Ancient Sunlight* (1951–69).

Williamson, Malcolm (1931–), Australian-born composer, pianist and organist. He has composed operas, ballets, film scores, orchestral and keyboard works. Among his operas are *Our Man in Havana* (1963) and *The Winter Star* (1973). He was made Master of the Queen's Music in 1975, and received the CBE in 1976.

William Tell (1829), opera by Gioacchino ROSSINI. The French libretto, from a play (1804) by SCHILLER, derived from the famous Swiss Legend.

Willibrord, Saint (c.658–c.739), Anglo-Saxon missionary. Educated at Ripon in Yorkshire, he preached in Frisia from 690 until 695, when he travelled to Rome to be appointed archbishop of an area centred on Utrecht.

Willis, Sir Ted (1918–), British dramatist whose plays usually have a working-class setting. They include *Woman in a Dressing Gown* (1962) and *Queenie* (1967). He also wrote the television series *Dixon of Dock Green* and *Sergeant Cork*. He was created a life peer in 1963.

Will-o'-the-wisp, or Jack-o'-lantern, mysterious light sometimes seen at night in marshy areas. It is not well understood but it is thought to be due to the spontaneous combustion of marsh gas (methane). Its elusive nature makes it the basis for various superstitious beliefs.

Willow, deciduous shrub and tree native to cool or mountainous temperate regions. It has long, pointed leaves and flowers borne on catkins. Familiar species include the weeping willow (*Salix babylonica*) with drooping branches, and pussy willow (*S. discolor*) with fuzzy catkins. Family Salicaceae. See also p.376.

Willowherb, also called rosebay willowherb, any of several species of perennial plants with willow-like leaves, especially *Epilobium angustifolium*, the fireweed of the temperate zone, so called because it readily establishes itself on newly burnt ground. It has a long unbranched stem with narrow leaves and purple red flowers. Height: to 1m (3.3ft). Family Onagraceae.

Willow pattern, printed decoration on English blue-and-white earthenware. It derives from Chinese landscape paintings, which it copies in a stylized manner. It became popular in the early 19th century and many of the major manufacturers produced their own designs, some of which have become collectors' pieces. It has retained its popularity as a design to the present day.

Wills, Helen (Newington). See MOODY, HELEN WILLS.

Willstätter, Richard (1872–1942), German chemist who revived the technique of chromatography, first discovered by Mikhail Tsvett (1872–1920), and used it to partly deduce the structure of CHLOROPHYLL. He showed that it contained a magnesium atom surrounded by PYRROLE rings and demonstrated its relationship to HEMOGLOBIN. For this work he was awarded the 1915 Nobel Prize in chemistry.

Williamson, Spencer Compton, Earl of (c.1673–1743), British politician. He entered the House of Commons in 1698 and was speaker of the House from 1715 to 1727. He was paymaster-general (1722–30) and lord PRIVY SEAL (1730). He was made First Lord of the Treasury in 1742–43.

Wilmot, Frank Leslie Thompson (1881–1942), Australian poet who was an ardent pacifist, writing under the name of Furnley Maurice, and is best known for his poem *To God: From the Warring Nations* (1917), which is a bitter indictment of war.

Wilson, Angus (1913–), British novelist, real name Angus Frank Johnstone-

Wilson. He wrote satirically of English middle-class life, and his novels include *Hemlock and After* (1952), *Anglo-Saxon Attitudes* (1956) and *No Laughing Matter* (1967).

Wilson, Charles Thomson Rees (1869–1959), British physicist who shared the 1927 Nobel Prize in physics with A. H. COMPTON for his invention of the Wilson cloud chamber, a device used in the study of radioactivity, X-rays and cosmic rays. He also devised a way of protecting barrage balloons from lightning.

Wilson, Colin Henry (1931–), British author. He first gained critical recognition with *The Outsider* (1956), a study of an individual who thinks that life is futile and that society is formed to conceal this fact.

Wilson, Edmund (1895–1972), US literary critic and author. He was editor of *Vanity Fair* and literary editor of *New Republic* (1926–31). His work includes *Axel's Castle* (1931), on the Symbolists; *To the Finland Station* (1940), on European revolutionary traditions; and *Patriotic Gore* (1962), on the literature of the American Civil War.

Wilson, Edmund Beecher (1856–1939), US biologist, whose research mainly concerned embryology and cytology. He traced the formation of different kinds of tissues from individual precursor cells, and studied the relationship of CHROMOSOMES to sex-determination and the hereditary function of chromosomes.

Wilson, Sir Henry Hughes (1864–1922), British military commander. He was Chief of the Imperial General Staff between 1918 and 1922 and was made a field-marshal in 1919. After entering politics in 1922, he vigorously opposed Ireland's SINN FEIN and was assassinated by two of its members.

Wilson, Henry Maitland, 1st Baron Wilson (1881–1964), British field-marshal. He served in the SOUTH AFRICAN WAR and in WWI and, at the outbreak of WWII, was appointed Commander-in-Chief in Egypt. In 1943 he became C-in-C Middle East and 1943–44 Supreme Allied Commander Mediterranean. He was called "Jumbo" by his troops because of his large stature.

Wilson, Sir James Harold (1916–), British Labour politician and Prime Minister. He became an MP in 1945 and was appointed President of the Board of Trade in 1947. In 1951 he resigned from ATTLEE's government over the imposition of medical prescription charges. He was elected Labour leader in 1963 and was four times Prime Minister (1964–66, 1966–70, 1974 and 1974–76). He established the OPEN UNIVERSITY (1970) and accelerated the growth of the comprehensive system of education. His government re-nationalized the steel industry, introduced measures for rent control and the control of prices and incomes and provided time for the passing of bills to legalize abortion and homosexual acts. He resigned as Prime Minister in 1976, but retained his seat in the House of Commons. See also pp.1720–1721.

Wilson, John Tuzo (1908–), Canadian geophysicist and geologist who determined global patterns of faulting and the structure of the continents. His investigations have influenced theories of CONTINENTAL DRIFT, sea-floor spreading and convection currents within the Earth.

Wilson, Richard (1714–82), Welsh landscape painter. He studied in London as a portrait painter, but after visiting Italy (1752–56) turned to landscape in the classical tradition of CLAUDE LORRAINE. He later painted landscapes in England and Wales. See also pp.1547, 1770.

Wilson, Sandy (1924–), British composer and lyricist. He wrote lyrics for a touring company before writing a pastiche of 1920s musicals, *The Boy Friend* (1953), which ran for five years in London's West End.

Wilson, Thomas Woodrow (1856–1924), 28th US president (1913–21), who administered the country throughout WWI and then worked uncompromisingly for a just international peace settlement. During his administration legislation was launched to give women the vote and to prohibit the

sale of alcoholic liquor; anti-trust laws were passed; the tariff was reduced and labour conditions on board ship and for railway workers were reformed. In foreign affairs, WWI overshadowed his first term and as public opinion against Germany mounted during his second term, the USA declared war (1917). In 1918, Wilson formulated his FOURTEEN POINTS, which were to form the basis for the peace; the resulting Treaty of Versailles was not what he had hoped for. Although he played a leading role in establishing the LEAGUE OF NATIONS his own country was strongly opposed to it. See also pp.1672, 1672.

Wilson, Mount. See MOUNT WILSON OBSERVATORY.

Wilson's Promontory, most southerly point of the Australian mainland, in Victoria, on the Bass Strait between Waratah Bay and Corner Inlet. The area is National Parkland.

Wilton, town in Wiltshire (and after which Wiltshire was named), central England. The town is famous for its carpets which have been manufactured there for centuries. Wilton was the capital of the ancient kingdom of WESSEX. A noted landmark is Wilton House. Farm machinery is manufactured and the town has an important sheep market.

Wiltshire, county in SW England. Much of it is part of Salisbury Plain or of the Marlborough Downs to the N. The principal occupation is farming; sheep are grazed on the highland areas and dairy farming is important in the fertile valleys of the Lower Avon, East Avon and Kennet rivers. The chief industries are textiles, farm machinery, food processing and electrical goods. Swindon is the principal manufacturing town, and Salisbury is the county town. Area: 3,481sq km (1,344sq miles). Pop. (1979 est.) 516,400.

Wimbledon, popular name for the All England Lawn Tennis Championships played annually at the All England Club, Wimbledon. It is the world's foremost championship played on grass. It was first held in 1877 and was open only to amateurs until 1968. The championships have been held at the present ground since 1922. In 1981 there was controversy over whether players should have to qualify for the tournament by playing in a minimum number of other international matches.

Winch, drum mounted vertically, around which is wound rope or cable attached to an object to be hauled. A winch normally has a ratchet wheel and a pawl to prevent slippage of the load, and brakes to regulate the speed of movement. See also p.456.

Winchester, Oliver Fisher (1810–80), US manufacturer of guns and ammunition who made the Winchester rifle. In 1860 B. T. Henry, who was his chief designer, patented a repeating rifle. This was the forerunner of a long line of Winchester guns; most famous was the Model 73.

Winchester, county town of Hampshire, in central England, on the River Itchen. Known as Venta Belgarum by the Romans, it was capital of the Anglo-Saxon kingdom of WESSEX from the 6th to the 10th centuries. It became a medieval centre of learning and religion. The city's magnificent cathedral (1070–98) is one of the finest in England, and is the burial place of several Saxon kings and queens. Winchester College, founded in 1387, is the oldest public school in England. Much of the old city remains, including the ruins of a Norman castle. Today Winchester is an important administrative and commercial centre. Pop. (1981 est.) 92,670.

Winchester, city in N Virginia, USA, in the Shenandoah Valley. During the FRENCH AND INDIAN WAR Winchester was a centre for defence against Indian raids. George WASHINGTON, in command of Virginian troops, had his headquarters there. During the AMERICAN CIVIL WAR the city was badly damaged and changed hands several times. Winchester is a trade and distribution centre for a fruit-growing region. Industries: clothing, plastics, furniture.

Winchester, Statute of (1285), STATUTE issued by EDWARD I of England to provide for the better preservation of peace and order. It laid down penalties for harbour-

ing criminals and concealing crimes. It also made permanent and regular the custom of WATCH AND WARD. Policing was thus made an obligation of citizenship.

Winchester School, painting style of English illuminated manuscripts of the 10th century, produced mainly at Winchester. The greatest example is the *Benedictional of St Aethelwold* (10th century), now in the British Museum.

Winckelmann, Johann Joachim (1717-68), German archaeologist and art historian who helped to popularize ancient art, especially that of Greece, and stimulated the Neo-classical revival of the late 18th century.

Wind, air current that moves rapidly parallel to the Earth's surface. (Air currents in vertical motion are called updrafts or downdrafts.) Wind direction is indicated by wind or weather vanes, wind speed by ANEMOMETERS and wind force by the BEAUFORT WIND SCALE. Steady winds in the tropics, eg those in the DOLDRUMS, are called TRADE WINDS. Monsoons are seasonal winds that bring predictable rains in Asia and are caused by high temperature and pressure over continents in winter (for low in summer) compared with those over the oceans. Foehns (föhn) are warm, dry winds produced by adiabatic compression (compression accompanied by temperature rise) as air descends the lee of mountainous areas; found in the Alps, they are called chinooks in the Rockies. Siroccos are hot, humid Mediterranean winds, often bringing rain and fog to continental Europe. See also pp.228-229, 248-249.

Windaus, Adolf (1876-1959), German chemist. In 1907 he synthesized histamine and in 1928 he was awarded the Nobel Prize in chemistry for his work on the structure of STEROIDS and the photochemistry of VITAMIN D.

Windermere, largest lake in England, in the LAKE DISTRICT in Cumbria, NW England. Windermere town, on the E shore of the lake, is a popular tourist resort. Length: 17km (10 miles); greatest width 1.6km (1 mile).

Wind flower. See ANEMONE.

Windhoek, capital and largest city of Namibia. The city originally served as the headquarters of a Nama chief. In 1892 it was made the capital of a German colony but the city was taken by South African troops in WWI. Windhoek is an important world trade market for karakul sheep skins. Pop. 77,000.

Wind instruments, musical instruments which are sounded by blowing, which sets the air inside them vibrating. They may be classified into three types: the first two of which make up the WOODWIND family of instruments, and the third type are BRASS instruments.

Wind in the Willows, The (1908), children's story by Kenneth GRAHAME. It began as a story for his son Alastair, and contains the celebrated animal characters, Mole, Badger, Water Rat, and Toad.

Windlass, hauling device operated by hand, most familiar as that used to raise buckets of water from a well. It consists of a cylinder around which the haulage rope is wound and which is turned by a hand lever or crank, using the principle of the wheel and axle. See also pp.456-457.

Windmill, mill powered by the wind acting on sails or vanes. The earliest known windmills were in the Middle East in the 7th century. The idea spread to Europe in the Middle Ages and their use was widespread during the early years of the Industrial Revolution, but declined with the development of the steam engine in the 19th century. See also WATER MILL; pp.428-429.

Windmill Hill culture, name given to one of the earliest NEOLITHIC cultures in Britain, found at Windmill Hill, Wiltshire, and dating from c.4000 BC. This culture introduced an agricultural way of life and made the first pottery. See also p.1218.

Windmill Theatre, playhouse in London's West End which stood on the site of a 17th century windmill. Originally a cinema, the Windmill was best known for its non-stop revues and for the catch phrase "We never closed" which referred to the decision to stay open in the WWII BLITZ. Several come-

dians including, Tony HANCOCK and Harry Secombe, began their careers at the Theatre, which closed in 1964 and later reopened as a cinema.

Window tax, British tax levied on the number of windows in a dwelling-place first imposed in 1696 to supply the cost of replacing damaged coinage. It replaced the hearth tax. It was increased in 1782 and 1797. After 1792 houses with fewer than seven windows were exempt from it, after 1825 houses with fewer than eight windows. It was repealed in 1851.

Windpipe. See TRACHEA.

Wind power, technology of harnessing the wind to provide ENERGY to drive machines and to generate electricity. Today wind power is being considered as a source of energy, mainly to generate electricity. Initial research, however, shows that windmills would have to be impractically large to match the output of even a small power station. See also pp.428-429, 444.

Wind sock, flexible, cone-shaped device that indicates wind direction and force. The sock is designed to swivel so that the small end of the cone points downwind. An idea of windspeed can be judged from the sock's extension. See also ANEMOMETER; WEATHERCOCK.

Windsor, Duke of. See EDWARD VIII.

Windsor, name by which the British royal family has been known since 1917. Queen VICTORIA's descendants in the male line originally belonged to the German house of Saxe-Coburg Gotha, the family of her husband, Prince Albert. During WWI, however, this connection proved embarrassing. In a proclamation in 1917 GEORGE V decreed that British subjects descended from Victoria in the male line would take the surname "of Windsor". In decrees of 1952 and 1960 Elizabeth II modified this decree to the effect that her descendants, should take the surname Windsor or Mountbatten-Windsor.

Windsor, Wallis Warfield, Duchess of See SIMPSON, MRS WALLIS WARFIELD.

Windsor, town in Berkshire, s central England, on the River Thames. WINDSOR CASTLE has been a residence of the English monarchy since WILLIAM THE CONQUEROR. The castle includes the magnificent St George's Chapel, which contains several royal tombs. Windsor town hall was built by Sir Christopher WREN. Tourism is a major industry. Pop. (1973 est.) 29,700.

Windsor, city in SE Ontario, Canada, on the Detroit River opposite Detroit, Michigan. The city was founded in 1749 by the French. It is a port of entry and, being on the Canadian National and Canadian Pacific railways, an industrial and transportation centre. The university of Windsor was founded in 1963. Industries: motor vehicles, pharmaceuticals, chemicals, salt. Pop. (1976) 196,526.

Windsor and Maidenhead, county district in E BERKSHIRE, England; created in 1974 under the Local Government Act (1972). Area: 198sq km (76sq miles). Pop. (1979 est.) 131,500.

Windsor Castle, originally Norman building 32km (20 miles) W of London, one of the homes of the reigning British monarch. Built on a low hill on the NE edge of Windsor, it covers 5 hectares (13 acres). The first Windsor Castle was on a different site. Begun in 1070, the present castle was added to by Henry II and subsequent monarchs including George IV.

Wind tunnel, chamber in which aircraft components and scale models are tested by being exposed to mechanically produced wind. Modern tunnels can reproduce conditions of temperature and pressure that aircraft may encounter and can generate winds far into the hypersonic range to simulate the most rigorous conditions of flight. See also AERONAUTICS. pp. 830-831, 831.

Windward Islands, group of islands in the SE West Indies. They form part of the Lesser Antilles and extend from the Leeward Islands to the NE coast of Venezuela; the principal islands are MARTINIQUE, GRENADA, DOMINICA, ST LUCIA, ST VINCENT and the Grenadines group. The islands, volcanic in origin, are mountainous. Tropical crops, including bananas, spices, limes and cacao, are grown. Roseau on Dominica

and Kingstown on St Vincent are the chief towns. Tourism is an important industry. Area: approx. 1,810sq km (700sq miles). Pop. (1979) 13,713.

Windward Passage, strait between Capo Maisi, Cuba (W), and Cap du Môle, Haiti (E), in the West Indies, connecting the Caribbean Sea (S) with the Atlantic Ocean (N). It is an important shipping route between the USA and the Panama Canal. Width: approx. 80km (50 miles).

Wine, alcoholic beverage made from the fermented juice of fruits, herbs and flowers, but especially from grapes. Table wines are still, with 7-15% alcohol; sparkling wines are effervescent; fortified wines such as SHERRY contain added BRANDY, giving 16-23% alcoholic content. See also pp.694-699.

Wine-making, conversion of grapes, or other fruit, to an alcoholic beverage. *Vitis vinifera* is the species of grape most commonly used. It is harvested in late summer or autumn and put into presses to extract the juices. This unfermented juice, known as "must", is left to ferment in vats, casks or bottles. Skins and seeds are included in the vats of must for the production of red wine. Wine yeast (*saccharomyces*) converts the natural sugar into alcohol and carbon dioxide. During the ageing process it is transferred from cask to cask to get rid of the settled solid matter. Then it is filtered and bottled. The timing and the detailed techniques of these processes determine the type of wine that is made. Leading wine-producing countries include France, Germany, Italy and Spain. See also pp.694-699.

Wing, aircraft, AEROFOIL whose major function is to provide lift (upward force). They often contain the fuel tanks and support appendages, such as the flaps, ailerons and landing gear. See also pp.518-519, 518-519, 572-573, 572-573.

Wingate, Orde Charles (1903-44), British general famous for his unorthodox ideas and methods. From 1936 to 1939, as an intelligence officer, he organized counter-raids on Arabs attacking Jewish communities. In 1941 he commanded an African force which took Addis Ababa from the Italians. In 1942 he established the Chindits - fighters specially trained in the rigours of jungle warfare - and operated in Burma far behind Japanese lines. Supplied by air, his force caused great disruption to the enemy's supplies and communications. He was killed when his aircraft crashed while attempting to rejoin his command after a staff conference.

Winged Victory. See VICTORY (NIKE) OF SAMOTHRACE.

Wings, in biology, specialized organs for flight which are possessed by most birds, many insects and certain mammals and reptiles. The forelimbs of a bird have developed into such structures. Bats have membranous tissue supported by the digits ("fingers") of the forelimbs. Insects may have one or two pairs of veined or membranous wings. See also pp.38-39, 38-39, 74-75, 74-75.

Wings, in the theatre, flats (canvas-covered wooden frames) at either side of the stage; they may face the audience directly or obliquely and serve to conceal the side of the set. Wings were first used by Giovan Battista Aleotti (1596-1636) in the 17th century and facilitated rapid and multiple scene changes.

Winkle, or periwinkle, small aquatic gastropod mollusc. The unsegmented body is soft with a distinct head and muscular foot, and is protected by a hard, univalve shell. Winkles feed on rock algae in the intertidal zone. The common marine species *Littorina littorea* is edible. See also p.2.

Winkler, Hans Gunter (1926-), West German show jumping rider. World champion in 1954 and 1955 riding Halla, he won the individual gold medal at the 1956 Olympic Games and helped the German team to win four golds (1956, 1960, 1964, 1972). He won the first European championship in 1957.

Winner, Michael (1936-), British film director. He began his career in the

Windmill sails are aligned to the wind by a vane, forcing them to revolve.

Wind tunnels may be used to study the aerodynamics of aircraft and buildings.

Wine-making; skins are separated from the juice, which is then fermented.

Aircraft wing: flaps are lowered to increase lift and to aid stability.

Winnie-the-Pooh

Wintergreen leaves are used in N America to make the drink known as mountain tea.

Wireworms live to ten years and are controlled by crop rotation and insecticides.

Wisconsin's largest city is Milwaukee, a major port and industrial centre.

Witch hazel derives its name from the use of its plant forked twigs as divining rods.

mid-1950s making second features, and progressed to major films in the early 1960s. His films include *I'll Never Forget What's Is Name* (1967), *The Nightcomers* (1971) and *The Sentinel* (1976).

Winnie-the-Pooh, popular bear character created in his books by the British novelist A.A. MILNE. The books were written for his six-year-old son, Christopher Robin, and were about his toys. *Winnie-the-Pooh* was written in 1926, and *The House at Pooh Corner* in 1928.

Winnipeg, capital of Manitoba province, and Canada's third-largest city. It stands at the confluence of the Assiniboine and Red rivers. Founded in 1812 as the Red River settlement by the HUDSON'S BAY COMPANY, the town came under the control of the Canadian government in 1870 when the province of Manitoba was established and Winnipeg became the capital. The city grew with the completion of the CANADIAN PACIFIC Railroad. It is now the major city of the Canadian prairies and one of the largest wheat markets in the world. The city is the seat of Manitoba University (1877). The principal industry is food processing. Pop. (1980 est.) 578,000. **Winnipeg, Lake**, resort lake in s central Manitoba province, third largest lake in Canada. Discovered in 1733, it was used extensively by fur traders and explorers. It is drained by the Nelson River to Hudson Bay and is believed to be a remnant of the glacial Lake Agassiz. Area: 24,514sq km (9,465sq miles).

Winter, Frederick Thomas (1926–), British jockey. He was a flat race rider (1939–42), a National Hunt steeple chaser (1947–64) and won the Grand National twice. In the 1952–53 National Hunt season he rode a total of 121 winners. He became a trainer in 1964.

Winter, coldest season of the year, between autumn and spring, which occurs from December to March in northern latitudes and from June to September in southern latitudes. It is reckoned astronomically from the winter solstice (20 or 21 Dec) to the vernal equinox (20 or 21 March). It is associated with hibernation and dormancy in animals, and there is generally a lull in agricultural production.

Winter cherry. See CHINESE LANTERN.

Wintergreen, any of various woody, evergreen plants, especially *Gaultheria procumbens*, the teaberry of the USA, Canada and Britain; the name also refers to the aromatic oil derived from its leaves. Family Ericaceae.

Winterhalter, Franz Xavier (1806–73), German painter and engraver. He painted portraits of various European rulers, including Queen Victoria and her family (1846–47).

Winter Olympics. See OLYMPIC GAMES.

Winter's bark, tree, known for its medicinal qualities. The elliptic-shaped leaves are leathery and the fragrant, cream-coloured flowers and are borne in clusters on red-ringed shoots. The bark was used to prevent scurvy. Height: 15m (50ft).

Winter sports, all-embracing term used to describe ice and snow sports, many of which make up the Winter Olympic Games, first held in 1924. There are two distinct ski sports: alpine ski racing (consisting of downhill, slalom and giant slalom) and Nordic skiing. Ice sports include figure skating for single skaters and pairs, ice dancing, ice hockey, speed skating around oval circuits and curling. A third variety of winter sports is tobogganing and bobsledding, in which individuals or teams of two or four (bobsleds only) are timed as they hurtle down specially constructed banked runs of ice. On a non-competitive basis, winter sports are practised wherever there are favourable conditions, and winter sports resorts play a major part in the tourist industries of some countries.

Winter's Tale, The (1610), romance by William SHAKESPEARE. Leontes, King of Sicily, imprisons his wife Hermione for an imagined indiscretion with his friend Polixenes, and orders that her newborn daughter Perdita, be left on a shore to die. Perdita is rescued and brought up by a shepherd. All are reunited when his daughter is wooed by Polixenes's son

Florizel. See also HC1 pp.283, 285. **Winterthur**, city in N Switzerland, 19km (12 miles) NE of Zurich. The city was ruled by the counts of Kyburg until 1264, when it passed to the HOLY ROMAN EMPIRE from 1415 to 1452. It was bought by Zurich in 1467. Winterthur is the site of 15th- and 17th-century castles and has an annual music festival. Industries: railway equipment, textiles, clothes. Pop. (1981) 92,722.

Wire, thin strand of metal, made from rod drawn through metal dies which get progressively smaller until the wire, which is continuously wound onto drums, is of the required diameter. The drawing process toughens steel so that a rope or cable made from steel wire is much stronger than an undrawn steel rod of the same diameter. Copper and aluminium wire are used to make electric CABLES.

Wire-haired terrier. See FOX TERRIER.

Wireless. See RADIO.

Wirén, Dag Ivar (1905–), Swedish composer. He studied in Stockholm and Paris and has written five symphonies, a cello concerto and several string quartets.

Wireworm, long cylindrical larva of a CLICK-BEETLE of N temperate woodlands. It is generally brown or yellow and is distinctly segmented. Most species live in the soil, and may cause serious damage to the roots of cultivated crops. Family Elateridae. The name also refers to any of the smooth-bodied MILLIPEDES of the family Parajulidae.

Wiring, electrical, any of several types of metal wires that make up electrical circuits. Homes are supplied with single-phase electricity along a three-core flex consisting of live (brown), neutral (blue) and an earth (green and yellow) wires. See also pp.876–885.

Wirral, county district in SW MERSEYSIDE, England; created in 1974 under the Local Government Act (1972). Area: 157sq km (61sq miles). Pop. (1979 est.) 342,300.

Wirth, Karl Joseph (1879–1956), German statesman and Chancellor (1921–22) in the WEIMAR REPUBLIC. He advocated fulfilment of Allied demands under the VERSAILLES treaty. In 1922 he negotiated the Treaty of Rapallo with the USSR, which ended Germany's post-war diplomatic isolation.

Wisconsin, state in N central USA, in the region of the GREAT LAKES. The land is rolling plain that slopes gradually down from the N. There are numerous lakes in the state, the largest of which is Lake Winnebago. Wisconsin is the leading US producer of milk and cheese and it has the largest dairy herds. The chief crops are hay, corn, oats, fruit and vegetables. The state's most valuable resource is timber: 45% of the land is forested. Mineral deposits include sand and gravel, and zinc, lead, copper and iron. Food processing is one of the main industries. Others include the manufacture of farm machinery, brewing and tourism. Madison is the state capital and Milwaukee the largest city.

The French claimed the region in 1634, Great Britain took it in 1763 and it was ceded to the USA in 1783. Settlement of the region was slow. Lead deposits were exploited in the SW and more land was obtained after the elimination of hostile Indians. The Territory of Wisconsin was established in 1836 and admitted to the Union in 1848. Area: 145,438sq km (56,154sq miles). Pop. (1980) 4,705,335. See also p.2161.

Wisdom of Solomon, biblical book of the Old Testament APOCRYPHA. The first nine chapters deal with the moral and intellectual aspects of the doctrine of Wisdom, the remaining 10 chapters with the place of the doctrine in history.

Wise, Michael John (1918–), British geographer. He was appointed professor of geography, University of London, in 1958. His books include *A Pictorial Geography of the West Midlands* (1958).

Wise, Thomas James (1859–1937), British bibliographer who between 1890 and 1930 collected the Ashley library of first editions of (mainly British) poets and playwrights.

Wiseman, Nicholas Patrick Stephen (1802–65), British Catholic prelate. He

was rector of the English College at Rome (1828–40) and became a bishop in 1840. His elevation to the archbishopric of Westminster in 1850 provoked the "papal aggression" crisis and the passing of the Ecclesiastical Titles Act (1851), which forbade the assumption of territorial titles by the Catholic hierarchy in England.

Wisent. See BISON.

Wishart, George (c.1513–46), Scottish religious reformer. Schoolmaster of Montrose, he was charged with heresy in 1538 and fled to England, but after studying in Cambridge, returned to Scotland in 1543. He preached on behalf of Reformed doctrines, and was assisted by John KNOX who became his disciple. He was burnt as a heretic at St Andrews in 1546.

Wisla. See VISTULA.

Wissmann, Hermann von (1853–1905), German explorer and colonial administrator in Africa. He explored central and eastern Africa and helped to found the colony of German East Africa, of which he became Imperial Governor (1895–96).

Wisteria, genus of hardy woody vines native to North America, Japan and China. They have showy, fragrant flower clusters of purplish-white, pink or blue. Family Leguminosae.

Witan (witenagemot), national assembly to advise the king in Anglo-Saxon England, from the Old English *witan* (wise man) and *gemote* (a meeting). It consisted of the king, the higher clergy and the great landowners, THEGNS and EALDORMEN. It is considered by some to be the origin of the British Parliament.

Witchcraft, exercise of supernatural occult powers, usually due to some inherent power rather than to an acquired skill such as sorcery. In Europe it originated in pagan cults and in mystical philosophies such as Gnosticism, which believed in the potency of both good and evil in the universe. Anthropologists are interested in witchcraft phenomena in some societies where the belief in spirits is associated with attempts to control them for harmful or beneficial ends.

Witch doctor, person regarded as supernaturally powerful, especially in Africa. Witch doctors fight or control evil spirits and may heal the sick, using herbs and rituals. In many societies they wield considerable social power.

Witch hazel, shrubs and small trees of temperate regions, mostly in Asia, that bloom in late autumn or early spring. The common witch hazel (*Hamamelis virginiana*) has yellow flowers. It produces the astringent, also called witch hazel, used for treating sprains. Family Hamamelidaceae.

Wite, fine paid to the king or other public official in Anglo-Saxon England for a number of offences. The principal ones were disturbing the peace and failing to carry out a royal command.

Withering, William (1741–99), British doctor who introduced the use of DIGITALIS to treat cardiac disorders, giving details of his work in *An Account of the Foxglove* (1785). He was the first to establish a connection between dropsy and heart disease; he was also a keen botanist and published *Botanical Arrangement* (1776). See also p.1090.

Witherite, glassy white, yellow or grey mineral, barium carbonate (BaCO₃), found in low-temperature lead and barite ore veins. It occurs as twinned, near-hexagonal crystals in the orthorhombic system. Hardness 3–3.5; s.g. 4.5.

Witkiewicz, Stanislaw Ignacy (1885–1939), Polish novelist and literary critic. His novels, full of sexual and political fantasy, include *Pozegnanie jesieni* (1927) and *Nienasycenie* (1930).

Witness, party to an act or transaction whose place in English law derives from Anglo-Saxon times, when COMMON LAW business was done with the aid of two witnesses, one who saw and one who heard. By an act of 1563 plaintiffs could compel witnesses to give SWORN EVIDENCE, but the defence gained the same power only in 1702.

Witt, Johan de (1625–72), Dutch statesman. An opponent of the House of ORANGE, he became Grand Pensionary

and virtual Prime Minister of Holland in 1653, playing a leading role in the DUTCH WARS. He helped to form the TRIPLE ALLIANCE with England and Sweden against LOUIS XIV in 1668, but when the French invaded Holland in 1672, popular feeling turned against him and he was assassinated.

Witte, Emanuel de (1617-92), Dutch painter famous for his portraits and genre scenes such as *Adriana van Heusden and her daughter at the fish market* (1672). He also painted architectural views, especially grand-scale church interiors notable for their use of elaborate perspective and control of light and shadow effects. See also pp.1444-1445, 1444-1445.

Witte, Count Sergei Yulievich (1849-1915), Russian politician. As Minister of Finance from 1892 to 1903 he reformed Russian finances, stimulated rapid industrialization and encouraged Russian expansion eastwards with the building of the Trans-Siberian Railway. See also pp.1649, 1649.

Wittekind (Widukind) (d.807), SAXON leader. He fought CHARLEMAGNE and the FRANKS in the Rhineland from 778 to 785 and when finally defeated was pardoned by Charlemagne.

Wittelsbach family, German dynasty which ruled Bavaria from 1180 to 1918. Branches of it divided and re-united several times during the Middle Ages. In 1623 the Duchy of Bavaria became an electorate, and in 1806 MAXIMILIAN I became the first King of Bavaria.

Wittenberg, city in central East Germany, on the River Elbe. In 1528 the elector Frederick III the Wise founded a university there which became the centre of the Protestant REFORMATION during the time Martin LUTHER and Philipp MELANCTHON were teaching there. Martin Luther nailed his 95 theses to the door of the Schlosskirche (castle church) of All Saints in 1517. Today Wittenberg is a mining and industrial centre; products include chemicals, rubber goods and machinery. Pop. (1971) 47,200.

Wittgenstein, Ludwig (1889-1951), Austrian philosopher, one of the most influential of the 20th century. He studied under Bertrand RUSSELL and later taught in Cambridge (1929-47). His work *Tractatus Logico-philosophicus* (1921) influenced the LOGICAL POSITIVISTS, arguing the strict relationships between language and the physical world; he claimed that there were therefore concepts that could not be expressed in language. After 1929 he criticized this hypothesis in highly-acclaimed lectures at Cambridge. These second thoughts were posthumously published in *Philosophical Investigations* (1953), in which he claimed that language was only a conventional "game", in which meaning was affected more by context than by formal relationships to reality.

Wittgenstein, Paul (1887-1961), Austrian pianist who settled in the USA in 1939. He lost his right arm in WWI but continued his concert career, showing great talent with his one hand. He commissioned a number of works to be composed for the left hand, including RAVEL's *Piano Concerto for the Left Hand* (1931).

Witwatersrand. See RAND.

Witz, Konrad (c.1400-c.1445), German painter who worked in Basel and Geneva. His style is characterized by its REALISM, probably derived from Jan VAN EYCK.

Wivallius, Lars (1605-69), Swedish poet and adventurer. Posing as a nobleman, he married a Swedish woman of high birth but was found out and imprisoned. His ballads, written mainly in prison, are notable for their spontaneity and delight in nature.

WMO. See WORLD METEOROLOGICAL ORGANIZATION.

Woad, or dyerswoad, biennial or perennial herb once grown as a source of blue dye. It was probably introduced by the early Britons to dye clothing and paint their bodies. A native of Eurasia, it bears small four-petalled, yellow flowers in summer. Height: 90cm (3ft). Family BRASSICACEAE; species *Isatis tinctoria*. See also p.584.

Wodehouse, Sir Pelham Grenville

(1881-1975), US novelist, b. Britain, famous for his humorous novels set in upper-class society of Edwardian times. His best-known stories are those about Bertie Wooster and his valet Jeeves. He was knighted in 1975.

Woden. See ODIN.

Woffington, Margaret ("Peg") (c.1714-60), Irish actress who made her English debut in 1740 as Sylvia in *The Recruiting Officer*. She was celebrated for her "breeches" role as Sir Harry Wildair in *The Constant Couple* (1741) and from 1742-48 was GARRICK's leading lady.

Wöhler, Friedrich (1800-82), German chemist who first isolated ALUMINIUM and BERYLLIUM and discovered calcium carbide. His synthesis of UREA (from the inorganic substance ammonium cyanate) in 1828 laid the foundation for modern organic chemistry. See also p.1091.

Wokingham, county district in E central BERKSHIRE, England; created in 1974 under the Local Government Act (1972). Area: 179sq km (69sq miles). Pop. (1979 est.) 111,000.

Wolf, Hugo (1860-1903), Austrian composer. He wrote settings of many poems by GOETHE and more than 50 songs based on poems by Eduard MÖRCKE. His only completed large-scale orchestral work is the symphonic poem *Penthesilea* (1885).

Wolf, Max (1863-1932), German astronomer who used photography to discover some 200 new asteroids and various nebulae. See also p.954.

Wolf, wild, dog-like carnivorous mammal, once widespread in the USA and Eurasia, especially the grey wolf (*Canis lupus*), which is now restricted to the USA and Asia. It is powerfully built with a wide head and neck, muscular limbs, large feet and a deep-chested body; the tail is long and bushy. It has earned a reputation for savagery and cunning from occasional attacks on livestock and human beings. Length: to 2m (6.6ft), including the tail. Family Canidae. See also pp.287, 288, 301, 304, 305.

Wolfe, James (1727-59), British general who fought in North America during the Seven Years War. He took an army down the St Lawrence River, and in a daring manoeuvre his men scaled the Heights of Abraham, taking the city of Quebec from MONTCALM and his French forces. Both Wolfe and Montcalm died in the battle, which ended French ambitions in Canada. See also p.1614.

Wolfe, Thomas Clayton (1900-38), US writer. His novels were autobiographical, rambling and much edited by his publishers. The first, *Look Homeward, Angel*, was published in 1929. Others include *Of Time and the River* (1935), *The Web and the Rock* (1939) and *You Can't Go Home Again* (1940).

Wolfenden, Lord John Frederick, (1906-), British administrator and academic. He was a fellow and tutor of philosophy at Magdalen College, Oxford (1929-1934), and became Vice-Chancellor of Reading University. He was Chairman of the Committee on Homosexual Offences and Prostitution which produced the "Wolfenden Report" in 1957.

Wolff, Christian von (1679-1754), Polish philosopher. While professor of mathematics at the University of Halle he acquired a reputation for systematizing and popularizing the doctrines of Gottfried LEIBNIZ. The Wolffian system, known for its rigid and narrow rationalism, was satirized by VOLTAIRE in *Candide*.

Wolf-Ferrari, Ermanno (1876-1948), German-Italian operatic composer whose works include a number of comic operas, such as *The School for Fathers* (1906), as well as the tragic opera *The Jewels of the Madonna* (1911).

Wolf fish, any of a number of fishes living in northern areas, of the family ANARHICADIDAE. They are so-called because of their biting and crushing teeth. They use these to feed on molluscs and crustaceans.

Wolfit, Sir Donald (1902-68), British actor. He retained 19th-century influences and in 1937 formed his own Shakespearean REPERTORY touring company, in the manner of the Victorians.

Wolfram. See TUNGSTEN.

Wolframite, black to brown mineral, iron-manganese tungstate, (Fe,Mn)WO₄. It is the chief ore of the metal tungsten, and is found extensively in Australia, China and India. It occurs as crystals in the monoclinic system, or as granular masses.

Wolfram von Eschenbach (c.1170-1220), German poet who was also a knight and led a restless, roving life. He was one of the great German MINNESINGERS and in 1203 was at the court of Landgrave Herrman of Thuringia. His only complete work is the famous *Parzival*. His other works include the unfinished epic poems *Willehalm* and *Titurel*. He also became a character in WAGNER's opera *Tannhäuser*.

Wolfsbane, or aconite or monkshood, any of several species of poisonous, perennial plants of the temperate zone. The name wolfsbane is derived from the superstition that the plant repels werewolves. Order Ranunculales.

Wolf spider, any of numerous species of mainly nocturnal, dark or drab spiders found throughout the world. It lives under organic debris or in a tubular nest, although a few species spin webs. Members of the genus *Pirata* often have yellow markings and live near water; those of the genus *Pardosa* have long thin legs with spined feet; species of the genus *Geolycosa* live in burrows and have front legs developed for digging. The large-bodied genus *Lycosa* includes the true tarantula (*L. tarantula*) of s Europe. Body length: to 2.5cm (1in). Family Lycosidae.

Wolgemut, Michael (1434-1519), German painter and designer of woodcuts. A pioneer in the use of woodcuts in book illustration, he was one of the most influential artists of his era and was responsible for the acceptance of the pure, untinted wood cut as a legitimate, self-sufficient medium. Equally important, it was in his workshop that the young Albrecht DÜRER was trained as a painter and graphic artist.

Wollaston, William Hyde (1766-1828), British scientist. He developed a method of making PLATINUM malleable, discovered PALLADIUM and RHODIUM, and invented the reflecting GONIOMETER, the CAMERA LUCIDA, and a lens (named after him) for correcting spherical aberrations.

Wollongong, city in New South Wales, Australia, 64km (40 miles) s of Sydney. The area was settled in 1815; since that time Wollongong has become a major iron and steel centre. Manufactures include chemicals, textiles and copper. Pop. (1973) 165,240.

Wollstonecraft, Mary (1759-97), British author who was an early proponent of equality between men and women. Her *Vindication of the Rights of Women* (1792) was the first great FEMINIST work. She visited Paris during the FRENCH REVOLUTION and on her return to Britain married William GODWIN. In 1797 she gave birth to a daughter who later became the wife of Percy Bysshe SHELLEY.

Wolof, Negroid people of Senegal, who speak a language belonging to the w Atlantic group of the Niger-Congo family. In the 15th century a Wolof empire dominated West Africa and traded in slaves with the Portuguese. They were converted to ISLAM in the 18th century.

Wols (1913-51), real name Alfred Otto Wolfgang Schulze, German painter. He studied at the Dessau BAUHAUS under MIES VAN DER ROHE and MOHOLY-NAGY before going to Paris in 1932, where he made a living as a photographer until he was interned in 1939. He then began to produce spontaneous, dynamic paintings, TACHISTE in style.

Wolseley, Garnet Joseph Wolseley, 1st Viscount (1833-1913), Commander-in-Chief of the British Army (1895-1901). He saw action during the CRIMEAN WAR, the INDIAN MUTINY, the Anglo-French conflict with China and in Africa. Promoted to Field-Marshal in 1894, he made important reforms in army structure, some of which remain today.

Wolsey, Thomas (c.1475-1530), English cardinal and politician. He served as papal legate (1518-30) and Lord Chancellor of England (1515-29). The son of a butcher, he was an ambitious man who rose

Wittenberg; the Luther Memorial stands before the Rathaus in the market square.

P. G. Wodehouse wrote more than 20 film scripts and collaborated on several musicals.

Michael Wolgemut is known for his richly carved altarpieces, eg in Schwabach.

Mary Wollstonecraft worked for the educational, not political, equality of women.

Wolverhampton

Wolverines, or skunk bears, are hunted by no other creature but man.

Sir Henry Wood conducts a lunch-time concert at the National Gallery.

Woodcock, related to the snipe, "drum" on the soil to attract worms.

Woodcuts were first used by the ancient Egyptians to imprint designs on bricks.

quickly in Church affairs, becoming HENRY VII's chaplain and then Dean of Lincoln (1509). Appointed a Privy councillor in 1511 by HENRY VIII, he was soon one of the most important men in England. He became Archbishop of York and Bishop of Lincoln in 1514, and a cardinal in 1515. His failure to obtain HENRY VIII's divorce from CATHERINE OF ARAGON brought his ruin. See also pp.1375, 1381, 1400, 1401.

Wolverhampton, industrial city and county district in West Midlands, England. The city is noted for its metal-working industries. The county district was created in 1974 under the Local Government Act (1972). Area: 69 sq km (27 sq miles). Pop. (1979 est.) 256,600.

Wolverine, solitary, ferocious mammal native to pine forests of the USA and Eurasia, the largest member of the WEASEL family. Dark brown, with lighter bands along the sides and neck, it has a bushy tail and large feet. Length: 91cm (36in); weight: 30kg (66lb). Species *Gulo gulo*.

Women in White, The (1860), novel by Wilkie COLLINS, one of the first detective novels in British fiction. The story, told in turn by several of the characters, tells of Sir Percival Glyde's attempt to win his wife's fortune by having her put in a lunatic asylum.

Women Kilde with Kindness, A (acted c.1603), play by the English Jacobean dramatist Thomas HEYWOOD. Considered to be his best work, it is a domestic tragedy of middle-class life. See also p.1419.

Woman of No Importance, A (1893), play by Oscar Wilde. See also pp.1577, 1577.

Womb, or uterus, hollow muscular organ in the pelvis of a woman. It protects and nourishes the growing FOETUS until birth. The upper part of it is broad and branches out on each side into the FALLOPIAN TUBES. The lower womb narrows into the CERVIX, which leads to the VAGINA. Its walls are strong, elastic muscle tissue lined with mucous membrane (endometrium), to which the fertilized egg attaches itself after fertilization. See also MENSTRUAL CYCLE.

Wombat, either of two species of large, rodent-like marsupial mammals of SE Australia and Tasmania. Both species are herbivorous, primarily nocturnal and live in extensive burrows. The common wombat, *Vombatus ursinus*, has coarse black hair and small ears. The hairy-nosed wombat, *Lasiorhinus latifrons*, has finer, grey fur and large ears. Length: to 1.2m (3.9ft). Family Vombatidae. See also pp.91, 303.

Women, Married, Property Acts. See MARRIED WOMEN'S PROPERTY ACTS.

Women in Love (1920), novel by D. H. LAWRENCE. The author examines the relationships of two couples; two sisters, Ursula and Gudrun, and their lovers Gerald and Rupert. The characters are believed to be based on Lawrence and his wife, Frieda, and John Middleton Murray and his wife, Katherine MANSFIELD.

Women's franchise. See SUFFRAGETTE MOVEMENT.

Women's Institutes, organizations for the promotion of women's education and communal activity, particularly in rural areas. Founded in Canada in 1897 by Mrs Adelaide Hoodless, the movement was established in Britain by Mrs Alfred Watt in Anglesey in 1915. In the 1970s there were more than 400,000 members in Britain, in 65 county federations.

Women's liberation, any of various organizations formed in the 1960s and 1970s aimed at obtaining equality and advancement for women. Although there is little international or even national co-ordination, the movement's general aim is to challenge the traditional roles and inferior status assigned to women.

Women's services, military corps of women. In Britain the first corps (apart from nursing) was the Women's Army Auxiliary Corps, formed in 1917; it was followed by corps for the navy and air force and all three were disbanded in 1921. They were revived for WWII as a paid force. They were not trained to fight; women worked chiefly as plotters in the operations rooms, in intelligence and in

the signal corps. In 1949 women's services were incorporated into the permanent establishment of the three forces and their auxiliary and reserve corps were also made regular and permanent.

Wonder, Stevie (1950-), blind US popular singer and composer, real name Stephen Judkins. As a song writer his work spans the gulf between soul music and pop. His records include *Music of my Mind* (1972), *Talking Book* (1972) and *Songs in the Key of Life* (1976).

Wonsan, port in SE North Korea, on the Sea of Japan, capital of Kangwŏn province and a major naval base. The city was opened to foreign trade in 1883. It served as a Japanese naval base during WWII, and suffered heavy damage during the KOREAN WAR. Industries: engineering, fishing and fish processing, oil refining, food processing, textiles. Pop. 300,000.

Wood, Anthony à (1632-95), English antiquary and historian. He prepared a treatise on the history of the University of Oxford, and also published *Athenae Oxonienses* (1691-92). He was expelled from the University in 1693 for libelling the first Earl of Clarendon.

Wood, Charles (1866-1926), Irish composer and organist. He was a pupil of STANFORD at the Royal College of Music, and became professor of music at Cambridge in 1924. He composed cantatas, church music and many songs.

Wood, Ellen (1814-87), British novelist who wrote under the name of Mrs Henry Wood. Her greatest success was the melodramatic *East Lynne* (1861). Her other novels include *The Channings* (1862) and *Pomeroy Abbey* (1878).

Wood, Garfield Arthur (1880-1971), US speedboat racer. He was a four-time winner of the US Gold Cup (1917, 1919-21) for hydroplane racing and won nine consecutive races for the international Harmsworth Trophy between 1920 and 1933 with his *Miss America* hydroplanes.

Wood, Grant (1892-1942), US painter who was influenced by early German and Flemish painting. In a meticulously detailed style, he depicted aspects of American life and the midwestern landscape. His best-known works are *American Gothic* (1930) and *Daughters of Revolution*.

Wood, Haydn (1882-1959), British composer who wrote more than 200 songs, the most popular of which was *Roses of Picardy* (1916).

Wood, Sir Henry Joseph (1869-1944), British conductor who studied at the Royal Academy of Music and became an opera conductor in 1889. In 1895 he was engaged to conduct the PROMENADE CONCERTS in London and continued to do so until 1944. He introduced many works previously unknown to Britain and taught singing and conducted choral societies.

Wood, Thomas (1892-1950), British composer, a pupil of STANFORD. His compositions, mostly accompanied or unaccompanied choral works, are English in style.

Wood, the name of two English PALLADIAN architects. John Wood (1704-54) was responsible for many of the finest buildings in Bath. He designed Prior Park (1735-38) there and in 1754 began the Circus which was completed by his son, also named John (1728-81). John the younger designed the Royal Crescent and the New Assembly Rooms in Bath and many country houses such as Buckland House, Oxfordshire (1755-57). See also p.1546.

Wood, name of a family of Staffordshire potters related by marriage to the WEDGWOOD family and considered among the finest of English potters. Ralph Wood (1715-72) worked under Thomas Whieldon and the Wedgwood family, producing salt-glazed figures. His cousin, Aaron Wood (1717-85), was a leading block cutter. Enoch Wood (1759-1840) modelled busts of historical figures, most of which are now museum pieces. The family were the originators of several glazing processes and were credited with the introduction of the Toby mug.

Wood, hard substance that forms the trunks of trees; it is the XYLEM (the

vascular tissue of a woody plant) which comprises the bulk of the stems and roots, supporting the plant. It consists of fine cellular tubes arranged vertically within the trunk, which accounts for the grain found in all wood. The relatively soft light-coloured wood is called sapwood. The non-conducting, older, darker wood is called heartwood, and is generally filled with RESINS, gums, mineral salts and tannin (TANNIC ACID). Easily-worked softwood, generally from a CONIFER such as PINE, is composed of simple tracheids that provide support and conduct water and food. More durable hardwood, generally from a deciduous species such as oak, derives support from woody fibres; water and food are conducted through separate vessels. Wood is commonly used by man as a building material, fuel, to make some types of PAPER, and as a source of CHARCOAL, CELLULOSE, ESSENTIAL OILS, LIGNIN, tannins, dyes and SUGARS. See also pp.366-368, 374.

Woodbine, name once popularly used in Britain for HONEYSUCKLE, *Lonicera periclymenum*, because of its twining habit.

Wood-carving, art form which includes any kind of sculpture in wood. The pieces may range from bas-relief on a small scale and life-size figures to the ornamentation on furniture and buildings. Wood-carving was one of the earliest art forms but few ancient pieces have survived apart from some Egyptian artefacts. Masks and statuettes were common in pre-colonial Africa, as were the elaborate totem poles of the American Indians. In the Middle Ages wood-carving formed part of the religious art of the age, and later artists, such as Grinling GIBBONS, made realistic carvings for interior decoration.

Woodcock, any of five species of reddish-brown shorebirds that nest in cool parts of the Northern Hemisphere and winter in warm areas. Both the Eurasian *Scolopax rusticola* and American *Philohela minor* insert their long, sensitive, flexible bills into swampy ground to find worms. Length: to 34cm (14in). Family Scolopacidae. See also pp.75, 307.

Woodcut, in printmaking, one of the oldest means of producing prints. A design is incised on a flat, polished piece of wood, parallel to the grain, using sharp, chisel-like tools. Those parts of the wood that are not to be inked are cut away. In the 16th century, black-line woodcuts reached their highest standards with the works of Albrecht DÜRER and his followers. In the early 19th century, the technique was rivalled in popularity by WOOD ENGRAVING, which eventually lost favour as a means of reproduction to PHOTO ENGRAVING. Many artists throughout the last century, however, such as GAUGUIN and MUNCH, continued to develop the technique. In 16th-century Japan, the UKIYO-E style arose as a result of the work of such artists as Hishikawa MORONOBU, and later by HOKUSAI and HIROSHIGE. The medium generated a popular demand for inexpensive prints, depicting everyday scenes and landscapes.

Wood engraving, in printmaking, technique enabling a print to be made on paper from the flat polished transverse section (through the grain) of a block of hardwood, after a design has been incised with burins (sharp chisel-like tools). Textural and linear effects can be achieved by varying the pressure and direction of the cutting strokes. This technique developed from the WOODCUT in 18th-century England; the first great exponent was Thomas BEWICK who illustrated *A History of British Birds* (1797, 1804). Although wood engravings were used to reproduce works of art, artists such as William BLAKE, Gustav DORÉ and Adolf MENZEL produced drawings specifically intended for this technique.

Wooderson, Sydney (1914-), British middle-distance runner who, in the late 1930s, held world records for the mile, 800m and 880yd, the last standing until 1938. He won European titles at 1,500m (1953) and 5,000m (1946).

Woodfall, British film production company. It was formed in 1958 by playwright John OSBORNE and the director Tony

RICHARDSON for the filming of their stage successes *Look Back in Anger* (1959) and *The Entertainer* (1960). Other productions include *Girl with Green Eyes* (1963), *Tom Jones* (1963) and *The Knack* (1965).

Woodforde, James ("Parson") (1740–1803), British diarist. He wrote the *Diary of a Country Parson* (5 vols, published 1924–31), a charming and vivid picture of the life, interests and activities of a country clergyman of the 18th century. Woodforde held livings in Somerset and Norfolk.

Woodhenge, Neolithic earthwork N of Amesbury, Wiltshire, thought to be older than Stonehenge. Six concentric rings of holes remain; wooden posts placed in these holes would, like Stonehenge, have indicated the position of the rising sun on Midsummer's Day. See also p.1175.

Woodland, area of trees, including deciduous species, evergreen species, or a mixture of both. Such an area is valuable for soil conservation, the safeguarding of water supplies, timber and as a scenic attraction. Modern forestry, for reasons of high yield, concentrates on fast-growing conifers. Woodlands, both natural and man-made, are important habitats for many kinds of wildlife. See also pp.306–309, 714–715.

Woodlouse, or sowbug, terrestrial crustacean found throughout the world, living under damp logs and stones and in houses. It has an oval, segmented body. Length: 20mm (0.75in). Order Isopoda; Genus *Oniscus*.

Wood-Neumann scale. See **MERCALLI SCALE**, MODIFIED.

Woodpecker, tree-climbing bird found nearly worldwide. Woodpeckers have strong pointed beaks and long protrusible tongues, which in some species often have harpoonlike tips for extracting insect larvae. They have black, red, white, yellow, brown or green plumage and some are crested. Family Picidae. See also pp.304, 307, 315, 344.

Woodruff, any of several species of plants of the genus *Asperula*, especially sweet woodruff (*A. odorata*), which is a herb of European woodlands. It has white flowers and broad leaves. Family Rubiaceae.

Wood's Halfpence, patent granted to William Wood in 1722, allowing him to mint coinage for circulation in Ireland. Another patent, granted in the same year, allowed him to mint coinage for the American colonies. Both patents were withdrawn after public outcry at the large profits he was able to make out of them.

Woodspring, county district in SW AVON, England; created in 1974 under the Local Government Act (1972). Area: 375sq km (145sq miles). Pop. (1979 est.) 156,600.

Woodstock, Oxfordshire borough famous in English history. It was an ancient royal seat (until the ENGLISH CIVIL WAR), described in the DOMESDAY BOOK as a royal forest. The ASSIZE of Woodstock (1184) is the earliest surviving law requiring "the peace of the king's venison". ELIZABETH I was imprisoned there by Mary in 1554. In 1704 the manor of Woodstock was given to the 1st Duke of Marlborough and BLENHEIM PALACE was built there for him by the nation.

Woodville, Elizabeth (1437–92), Queen Consort of King EDWARD IV of England. Daughter of Richard Woodville, Earl Rivers, she married Edward secretly in 1464. Her sons, EDWARD V and Richard of YORK, were possibly murdered in the Tower of London, but her daughter, Elizabeth of York (1465–1503), became HENRY VII's Queen and the mother of HENRY VIII.

Woodward, Sir Arthur Smith (1864–1944), British geologist. He was Keeper of Geology at the British Museum (1901–24) but is popularly remembered for his part in the PILTDOWN MAN controversy, his belief that the remains were human contributing to the success of the hoax. See also p.110.

Woodward, Robert Burns (1917–), US chemist. He was awarded the Nobel Prize in chemistry in 1965, in recognition of his synthesis of a number of complex organic substances including QUININE, CHOLESTEROL, CORTISONE, STRYCHNINE, RESERPINE, CHLOROPHYLL and TETRACYCLINE.

Woodwind, family of musical WIND INSTRUMENTS, which are traditionally made of wood but now often metal; they are played by means of a mouthpiece containing one or two reeds. The FLUTE and PICCOLO however are exceptional in that they are played by blowing across a hole. The other woodwind instruments of a symphony orchestra include the CLARINET (single reed) and the OBOE, COR ANGLAIS and BASSOON (all double reed). SAXOPHONES, a group of single-reed instruments always made of metal, are also included in the woodwind family. See also pp.1580–1581, 1580–1581.

Woodworking machinery, fixed power tools used to cut, work and join timber. They include circular bench saws and radial-arm saws for general cutting, such as sawing planks and for ripping, edging and cross-cutting; band saws; surface planers for smoothing and reducing timber; mortising machines for making joints; moulding cutters for making trims and moldings; and sanders for finishing planed surfaces. See also CARPENTRY.

Woodworm, larva of various species of beetles that burrow in wood. When present in large numbers woodworms can cause extensive damage. Their presence can be detected by holes in the wood from which the adult beetles have emerged; treatment involves the use of poisons. Genera include *Anobium* and *Lycus*.

Woodworth, Robert Sessions (1869–1962), US psychologist. He helped to turn US psychology away from the STRUCTURALISM of Wilhelm WUNDT and E. B. TITCHENER towards a consideration of cause and effect in mental processes, which came to be known as the functionalist school of US psychology. See also FUNCTIONAL PSYCHOLOGY.

Woody nightshade. See NIGHTSHADE.

Wookey Hole, cave system, open to tourists, 5km (3 miles) NW of Wells, on the edge of the Mendip Hills, SW England. Nine chambers (the ninth opened in 1975) follow the course of the River Axe through stalactite grottoes. Human skulls found dating from AD 100–300 suggest early sacrificial rites.

Wool, soft, generally white, brown or black animal fibre that forms the fleece (coat) of sheep. It is also the name of the raw fibres when removed from the animal and the yarns and textiles made from them after spinning, dyeing and weaving. Composed chiefly of KERATIN, the fibres are treated to remove an oily substance (which is purified to make LANOLIN). Selective breeding of sheep has reduced or eliminated a coarse outer coat of long hairs, still present in the MOULTON, leaving behind the woolly undercoat.

Woolf, Leonard (1880–1969), British writer, husband of Virginia Woolf, who in 1917 founded the Hogarth Press with his wife. His works include *Socialism and Co-operation* (1921) and *Imperialism and Civilization* (1928).

Woolf, Virginia (1882–1941), British novelist and critic, daughter of Leslie Stephen, wife of Leonard Woolf and a member of the BLOOMSBURY GROUP. Her works included *Night and Day* (1919), *To the Lighthouse* (1927) and *The Waves* (1931). She suffered from several mental breakdowns and eventually drowned herself.

Woolley, Sir Charles Leonard (1880–1960), British archaeologist. He was director of excavations at the site of the ancient Sumerian city of UR; he also explored CARCHEMISH, a Hittite stronghold, in 1912–14 (with T. E. LAWRENCE), and TELL EL AMARNA, Egypt, in 1921–22. He wrote *Ur of the Chaldees* (1929), and *The Bronze Age in UNESCO's History of the Scientific and Cultural Development of Mankind* (1958).

Woolley, Frank Edward (1887–1978), British cricketer who played for England and Kent. As a left-handed batsman and slow bowler he played in 64 Test matches between 1909 and 1934, scoring 3,283 runs at an average of 36.07 and taking 83 wickets at an average of 33.91. His career aggregate of 58,969 runs in first-class cricket was bettered only by Jack HOBBS and he took more catches in the field, prob-

ably, 1,011 in all, than any other player.

Woolsack, large bag of red wool which is the official seat of the Lord Chancellor as Speaker of the House of Lords. There were originally four woolsacks, probably from the reign of EDWARD III, for the Judges, the Barons of the EXCHEQUER, the SERJEANTS-AT-LAW and the Masters in CHANCERY.

Woolworth, Frank Winfield (1862–1919), US merchant who founded the international chain of stores known as "Woolworth's". In 1879 he opened a five-cent shop in Utica, New York, and eventually developed a large chain of stores in the USA; by 1919 there were more than 1,000 stores. In 1912 the shops were merged into the F. W. Woolworth Company.

Woomera, township in South Australia, 160km (100 miles) NNW of Port Augusta. Since 1945 it has been the site of a missile-testing range (which launched Australia's first earth satellite in 1967) and a satellite-tracking station.

Wootton, John (c.1686–1765), British painter who introduced the style of CLAUDE and DUGHET into England. He combined his landscapes with racing scenes and sporting conversation pieces. His *Members of the Beaufort Hunt* (1744) is an important early work of English sporting art.

Wootton of Abinger, Baroness (1897–), British economist, academic and life peer, b. Barbara Frances Wootton. She served on several important Royal Commissions after 1938 and her many publications include *Freedom Under Planning* (1945) and *The Social Foundations of Wage Policy* (1955).

Worcester, Battle of (1651), victory of the English army of CROMWELL over the Scottish army. The Scottish army of about 16,000 was routed by the 20,000-strong English force. The defeat ended the attempt of CHARLES II to regain his throne by Scottish arms.

Worcester, Royal, one of the best-known makes of English PORCELAIN. It is produced by the Royal Worcester Porcelain Co, which was founded in Bristol (1748) and moved to Worcester (1751). Early designs were influenced by English silverwork and Chinese porcelain; MEISSEN, SÈVRES and Japane Imari styles later served as models.

Worcestershire, former county in W central England; since 1974 it has been part of HEREFORD and WORCESTER. The region is hilly and includes the Cotswolds and the Malvern, Clent and Lickey hills. The Severn and the Avon are the chief rivers. The region is noted for its fruit-growing, and vegetables and hops are also important. Sheep, dairy and beef cattle are reared. The N of the county is part of the BLACK COUNTRY and industries include metallurgy and the manufacture of porcelain and carpets. Worcester was the county town. Area: 1,823sq km (704sq miles).

Wordsworth, William (1770–1850), British poet and a leader of the ROMANTIC movement, who spent much of his youth in Cumberland. He visited France in 1790 and became influenced by the spirit of the FRENCH REVOLUTION. On his return he and his sister Dorothy settled in Dorset where, with Samuel Taylor COLERIDGE, he wrote *Lyrical Ballads* in 1798. He later moved to the Lake District, and explored the influence of nature on the human mind. See also pp.1576, 1576.

Work, in physics, energy expended in moving a body against an opposing force. If the opposing force is the body's weight mg , where m is the body's mass and g is the acceleration due to gravity, the work done in raising it a height h is mgh . This work has been transferred to the body in the form of POTENTIAL ENERGY; if the body falls a distance h , the KINETIC ENERGY at the bottom of the fall equals the work done in raising it. See also p.827.

Work function, in thermodynamics, another name for free energy, the measure of the amount of work that a system can do. It is equal to the total internal energy of a system less the product of its temperature and ENTROPY.

Woodlouse is the only crustacean that is fully adapted to life on land.

Wool; after cleaning the wool is "carded" or combed into loose ropes and twisted.

Worcestershire's county town Worcester, with its 13–14th century cathedral.

William Wordsworth wrote poetry is "the spontaneous overflow of powerful feelings".

Workhouse

Workhouses enforced strict discipline and offered no comfort. In 1834, the Poor Law Amendment Act was passed.

World Cup Final in 1966; England beat West Germany by four goals to two.

World War I soldiers on the Western front celebrate Christmas in the trenches.

World War II: a Japanese delegate signs articles of surrender on 2 Sept. 1945.

Workhouse, institution for the unemployed in Britain. It originated in the houses of correction provided for vagabonds by the POOR LAW of 1601 but officially dates from 1696, when a workhouse was established by the Bristol corporation. A general act permitting workhouses to be founded in all parishes was passed in 1723. That act denied relief to those people who refused to enter a workhouse. Workhouses declined under the SPEENHAMLAND system of the late 18th and early 19th centuries, but were revived by the Poor Law of 1834. They had fallen into disuse by the early 20th century.

Working Men's Association, The International, socialist workers' group formed by English and French workers. Although not a founder member, Karl MARX was invited to join the committee, and became its inspirational leader. It soon became known as the "First International", with branches in most countries.

Working Men's Clubs, social clubs for the working class in Britain, especially in the North. They began in the early 19th century, and were intended chiefly to provide workers with a place to read and to discuss political and social issues.

Works, Ministry of. See ENVIRONMENT, DEPARTMENT OF THE.

Works Progress Administration (WPA), national project in the USA created by Congress in 1935 under Franklin Delano Roosevelt's NEW DEAL policy to stimulate national economic recovery. Billions of dollars were contributed to the scheme in which work programmes provided jobs for the unemployed. An average of about two million people were registered on WPA rolls at any one time between 1935 and 1941.

World Bank (International Bank for Reconstruction and Development), organization with headquarters in Washington DC, established at the BRETON WOODS CONFERENCE in 1944. Its role is to make long-term loans to member governments to aid their economic development. The major part of the bank's resources are derived from the world's capital markets. See also pp.1786, 1868.

World Council of Churches, fellowship of Christian Churches formed in AMSTERDAM in 1948 to work for the reunion of all Christian Churches and to establish a united Christian presence in the world. The headquarters of the council are in Geneva. Its membership in the mid-1970s consisted of all the major Christian Churches except the Roman Catholic Church and the Unitarians. The Roman Catholic Church has, however, been sending observers to assemblies of the World Council of Churches since 1961.

World Cup (golf), annual international tournament for two-man teams of professionals. It is played over four rounds with the combined scores of each country's two players determining the placings. A separate award is made for the best individual score.

World Cup (soccer), premier competition in Association football. Held every four years, it is open to member countries of FIFA (Fédération Internationale de Football Associations). They qualify for the final rounds in a series of home and away group matches arranged on a geographical basis. The 14 qualifiers plus the holder and the host nation play in four groups at venues in one country to produce eight quarter-finalists, two from each group. There are then two semifinals, a third-place match between the losing semi-finalists, and the final. First played in 1930, the tournament was for the Jules Rimet Trophy until 1970, when Brazil won it for the third time and thus took outright possession. A new trophy, called the FIFA World Cup, was first presented in 1974.

World fairs, large-scale expositions presenting displays of the goods, crafts and customs of participating nations, designed to stimulate trade and reflect cultural achievements. The first, the CRYSTAL PALACE Exposition, was held in London in 1851.

World Health Organization (WHO), UN

agency that deals with health problems in the world. It collects and shares medical and scientific information and promotes the establishment of international standards for drugs and vaccines. It was officially established as a UN agency in 1948. Its headquarters are in Geneva, Switzerland. See also p.1784.

World Meteorological Organization (WMO), organization with headquarters in Geneva, founded as the International Meteorological Organization in 1873. It promotes international co-operation in METEOROLOGY through the establishment of a network of meteorological stations throughout the world, and by the mutual exchange of weather information. In 1950 it became part of the United Nations.

World of Art, The, arts group and magazine founded in the 1890s in St Petersburg. Similar to the NABIS, it consisted chiefly of artists but also included musicians and poets. Prominent in the group were BAKST, BENOIS, and DIAGHILEV - the magazine's editor, whose Ballets Russes was the group's most important production.

World War I (1914-18), European conflict of unprecedented extent and ferocity, known also as the Great War. Although it was centred in Europe, hostilities also took place in the Middle East, the Far East and Africa. European territorial and economic rivalries had been intensified by the growing power of the German Empire and the conflict was precipitated by the assassination of Archduke FRANZ FERDINAND of Austria-Hungary (Germany's close ally) by a Serbian nationalist fanatic in 1914. The countries of Europe aligned themselves into two camps: the Allies, comprising Great Britain, France, Russia, Serbia, Montenegro, Japan and later Italy, Romania, Greece and the USA; and the Central Powers, consisting of Germany, Austria-Hungary, Bulgaria and the Ottoman Empire. In France and Belgium (the Western Front) the German schemes for rapid victory (the SCHLIEFFEN PLAN) failed, and the conflict soon degenerated into a war of attrition, both sides digging trenches and erecting fortifications. In the east, the huge manpower of Russia was savaged by the better trained and equipped German army. The outbreak of the RUSSIAN REVOLUTION (1917) effectively removed Russia from the war and peace between Germany and Russia was signed (1918) at BREST-LITOVSK.

Meanwhile, in 1917, the USA had entered the war on the Allied side and began ferrying troops to Europe. Early in 1918 the Germans launched a massive attack on the Western Front. It was frustrated by stubborn Allied resistance and the exhausted German army, and a starving civilian population, were not capable of further effort. An armistice was signed on 11 November 1918 and the ensuing Treaty of VERSAILLES (1919) imposed humiliating terms on Germany. See also pp.1666-1671, 1666-1671, 1674-1675, 1674-1675, 1700.

World War II (1939-1945), most extensive conflict in human history. After Adolf HITLER had assumed absolute power in Germany, he rebuilt the German armed forces and during the 1930s annexed considerable areas in central Europe. At the same time the FASCIST Italy of Benito MUSOLINI conquered Ethiopia (1935). Britain and France sought to appease the dictators but when Germany and the USSR (hitherto implacable foes) united to attack Poland (1 Sept 1939) a European conflict could not be avoided.

Poland soon succumbed to the German BLITZKRIEG and was partitioned between Germany and the USSR. In April 1940 the German army rapidly overwhelmed Norway, Holland and France. British forces were evacuated from DUNKIRK and German invasion of England was prevented only by the RAF's Battle of BRITAIN. In June 1941 Hitler invaded the USSR. His troops came within sight of Moscow but were halted in December by the early onset of a particularly harsh winter. In that same month the war became a global conflict. On 7 December the Japanese, determined to secure control of East Asia, bombed PEARL HARBOR,

destroying much of the US Pacific fleet. Thereafter they rapidly overran the Philippines, Indonesia, Malaya, Burma and many of the Pacific islands. They were not stemmed until the summer of 1942, when the US navy won victories at CORAL SEA and MIDWAY. In Europe the British drove the Germans and Italians from North Africa and then, together with US forces, invaded Sicily and then Italy, which surrendered in September 1943. Meanwhile, the Russians had inflicted a crushing defeat on the Germans at STALINGRAD and had begun their advance into Europe. On 6 June 1944 Allied forces landed in Normandy. Germany was now fighting on three fronts and was finally completely occupied and forced to capitulate in May 1945. In the Pacific, Japanese forces were gradually driven back, the Allies advancing from island to island. On 6 and 9 August 1945 the USA dropped atomic bombs on the Japanese mainland, which brought about Japanese surrender. Perhaps as many as 45,000,000 people, civilians and armed servicemen together, were killed during wwn which radically altered the balance of power with the USA and the USSR in positions of supreme power. See also pp.1708-1715, 1732-1733.

World Wildlife Fund (WWF), international organization (established in Britain in 1961) which raises voluntary funds for world conservation projects. It is also concerned with the education of mankind on the need to conserve endangered wildlife species. See also p.345.

Worm, any of a large variety of wriggling, limbless creatures with soft bodies. True worms differ from wormlike grubs or insect larvae. They have many cells but most have neither backbone nor notochord. Most worms belong to one or other of four main groups: ANNELIDS, FLATWORMS, NEMATODES, and ribbon worms. See also pp.18-19, 18-19.

Worm lizard. See AMPHISBAENID.

Worms, common name for the infestation of animals by parasitic worms. In human beings the most common varieties are the HOOKWORM, the filaria (producing FILARIASIS), the trichinella (producing TRICHINOSIS), the ROUNDWORM and the pinworm.

Worms, port in W West Germany, on the River Rhine, 16km (10 miles) NNW of Mannheim. It was made a free imperial city in 1156, and joined the Rhenish Confederation in 1255. The city was the site of the Diet of Worms in 1521, which was followed by the Edict of Worms in the same year. Worms became part of France in 1801 but passed to Hesse-Darmstadt state in 1815. The French occupied the city from 1918 to 1930 and it was taken by the Allies during wwn. Industries: leather goods, machinery, chemicals. Pop. (1970 est.) 78,000. See also p.1402.

Worms, Concordat of (1122), arrangement between the Holy Roman Emperor Henry V and Pope Calixtus II settling the investiture dispute, a struggle between the empire and the papacy over the control of church offices. After the election of new church officials by the clergy or the emperor in contested elections, the emperor would endow the officials with the *Regalia* (their due worldly possessions and duties) and the Church would deal with the *Spiritualia* (religious matters).

Worms, Diet of (1521), conference of the Holy Roman Empire, held in Worms, Germany, and presided over by Emperor CHARLES V. Martin LUTHER was summoned to appear before the Diet to retract his teachings, which had been condemned by the Pope. Luther refused to retract and the Edict of Worms (25 May 1521) declared him an outlaw. The Diet was one of the most important confrontations of the early REFORMATION. See also p.1402.

Wormwood, genus (*Artemisia*) of aromatic bitter shrubs and herbs, including common wormwood (*A. absinthium*), a European shrub that yields a bitter, dark green oil used to make ABSINTH. Family Asteraceae. See also p.332.

Worrell, Sir Frank Mortimer Maglinne (1924-67), West Indian cricketer who played for the West Indies, Barbados and

Jamaica. A graceful left-handed batsman and left-arm medium-pace bowler, he played in 51 Test matches between 1948 and 1963 scoring 3,860 runs, at an average of 49.48, and taking 69 wickets, at an average of 38.73. From 1960 he won international acclaim as an inspirational captain who drew together the strengths of West Indian cricket.

Worsaae, Jens Jacob Asmussen (1821–85), Danish archaeologist. His extensive travels in Scandinavia, France and Germany resulted in a number of works, two of which appeared in English as *Primeval Antiquities of England and Denmark* (1849) and *The Danes and Norwegians in England* (1852).

Worthington, Henry Rossiter (1817–80), US engineer and inventor. He invented a direct steam pump and set up a factory for its manufacture in New York in 1859. Worthington also developed the duplex steam feed pump, which is much used in oil pipelines and in waterworks.

Wouk, Herman (1915–), US novelist and radio scriptwriter. His novel *The Caine Mutiny* (1951), about the resistance of a junior officer to his tyrannical commanding officer during WWII, won him the 1952 Pulitzer Prize. Other works include *Marjorie Morningstar* (1955), *Youngblood Hawke* (1962), *Don't Stop the Carnival* (1965) and *The Winds of War* (1971).

Wouwerman brothers, Dutch painters based in Haarlem. Philips (1619–68), painted colourful battle scenes, cavalry skirmishes and hunts in which figures and landscape were given equal prominence. His style was imitated by his brothers Pieter (1623–82) and Jan (1629–66).

Woyzeck (1836), play by Georg Büchner. Expressionist in form, it consists of a series of apparently unordered scenes providing a social analysis of the forces that drive a young soldier to murder his wife. In 1920 it was used by Alban Berg as the basis for his opera *Wozzeck*.

Wrangel, Peter Nikolaievich, Baron (1878–1928), Russian General. Commander of a Cossack division, he joined the anti-Bolshevik "White" army of Denikin and helped to capture Volgograd from the Communists in 1919. He became Commander-in-Chief in 1920 and sought an alliance with Poland, but was defeated in the Ukraine. His army was evacuated to Constantinople from the Crimea and he emigrated to Belgium.

Wrasse, any of about 600 species of brilliantly coloured inshore tropical marine fish; many of the smaller species are popular aquarium species. They have protrusible mouths and sleep on their sides; some remove parasites from larger fish. Length: 7.6cm–3m (3in–10ft). Examples include the rainbow *Coris julis* and the cleaner *Labroides dimidiatus*. Family Labridae.

Wrekin, The, county district in E central SALOP, England; created in 1974 under the Local Government Act (1972). Area: 291sq km (112sq miles). Pop. (1979 est.) 122,400.

Wren, Sir Christopher (1632–1723), English architect, mathematician and astronomer. After the FIRE OF LONDON in 1666 he made a plan for the reconstruction of the city, but it was not used. He did, however, design 52 new churches in the city of London, the greatest of which is ST PAUL'S CATHEDRAL. Among his many other works are Chelsea and Greenwich hospitals in London. See also pp.1429, 1429, 1431, 1431, 1436.

Wren, Percival Christopher (1885–1941), British novelist. He was a soldier in the British Army and served in the French Foreign Legion, where his experiences inspired his romantic adventure stories, the best known of which are *Beau Geste* (1924) and *Beau Sabreur* (1926).

Wren, small, insect-eating songbird of temperate regions of Europe, Asia and most of the New World. Many species have white facial lines. The typical winter wren (*Troglodytes troglodytes*) has a slender bill, rounded wings, perky tail and dark brownish plumage; length: to 10cm (4in). Family Troglodytidae. See also pp.316, 333.

Wrestling, sport in which two unarmed

opponents try to secure a fall by means of body grips, strength and adroitness. The most common styles include Greco-Roman (most popular in continental Europe), which permits no tripping or holds below the waist; and free-style, which permits tackling, leg holds and tripping, but not punching, and is most popular in the USA and Britain. Other forms include SUMO WRESTLING, popular in Japan; yaghi, a Turkish form in which the contestants smear themselves with grease to make the holds difficult; sambo, a Russian form of jacket wrestling similar to JUDO; and the English Cumberland and Westmorland, an ancient style of wrestling in which the competitors start with their arms clasped behind each other's backs. Amateur wrestling can be conducted in both free-style and Greco-Roman style. It is classified by weight and conducted on a mat. A match consists of three periods of three minutes each, with points awarded for falls (pinning both shoulders to the mat) and other manoeuvres. Professional wrestling uses the free-style method, but is little more than planned entertainment.

Competitive wrestling originated in ancient Greece, where it was regarded as the most important event (after discus throwing) in the Olympic Games. Greco-Roman style wrestling was first included in the modern Olympics in 1896. It was dropped in 1900 but reinstated in 1904, when free-style was also included.

Wrexham Maelor, county district in SE CLWYD, Wales; created in 1974 under the Local Government Act (1972). Area: 367sq km (142sq miles). Pop. (1979 est.) 109,300.

Wright, Frank Lloyd (1869–1959), US architect. His first independent designs were for domestic houses, which he built with low, horizontal lines in his "prairie" style; the Robie house, Chicago (1908) is the most famous. He attempted to combine new mechanical methods and materials with organic architectural design, and to create open planning and free-flowing internal space. Notable buildings include the Larkin Office Building, Buffalo (1904), his winter residence Taliesin West, in Arizona (1938), the Guggenheim Museum, New York (designed 1943), and the Solomon R. Guggenheim Museum, New York City (1957–59). See also pp.1659, 1689.

Wright, Judith (1915–), Australian poet whose lyric poetry is marked by sensitivity and mastery of technique. Collections include *The Moving Image* (1946), *The Gateway* (1953) and *City Sunrise* (1964). She has also published biographies of Australian writers and the historical memoir *The Generations of Men* (1959).

Wright, Richard (1908–60), US short story writer and novelist, the first black American to gain international acclaim as a writer. His works, which deal with racial prejudice in the US, are realistic and brutal. They include *Native Son* (1940), *Black Boy* (1945), an account of the author's boyhood in the South, and *Twelve Million Black Voices* (1941), a folk history of blacks in America.

Wright, William Ambrose ("Billy") (1924–), British footballer who played for England and Wolverhampton Wanderers (Wolves). A stocky halfback, he won 105 caps for England (1946–59), 90 of them as captain. A member of the Wolves' 1949 FA Cup winning team, he led the club to three League titles in the 1950s.

Wright brothers, Wilbur (1867–1912) and Orville (1871–1948), US aviation pioneers. They used their bicycle factory as a laboratory for assembling their first aircraft and experimented with gliders to learn wing control and lateral balancing. The rolling sand dunes and fairly constant winds at Kitty Hawk, North Carolina, allowed them to test gliders (1900–02). Orville made the first piloted flight in a power-driven plane at Kitty Hawk in 1903. See also pp.514–515.

Wrothesley, Henry. See SOUTHAMPTON, HENRY WROTHESLEY.

Writ, in English law, a written order issued under seal by an executive officer of the

CROWN, such as a judge. It commands the person to whom it is directed to take certain action in relation to a civil or criminal suit, and is the first step in legal proceedings.

Writers to the Signet, ancient society of SOLICITORS in Scotland who alone have the right to prepare Crown writs. Their name comes from the SIGNET Office (abolished in 1851), which kept the Signet seal and whose clerks prepared WARRANTS for the issue of PRIVY SEAL WARRANTS.

Writing, visual record of language. The earliest known writing was developed in Sumeria c.4000 BC. Ancient writing, such as Egyptian hieroglyphs, was at first pictographic, seeking a character for each thing to be named. In the Chinese system there are still thousands of characters, which makes writing extremely difficult to learn and has contributed to the importance of scholars during Chinese history. Most modern alphabets are phonemic (they symbolize only the sounds of the particular language). See also pp.608–611.

Wrocław, industrial city in SW Poland, on the River Oder, approx. 306km (190 miles) SW of Warsaw and formerly known as Breslau. Originally a Slavic settlement, it was destroyed by the MONGOLS in 1241, rebuilt by the Germans and ceded to Prussia in 1741. It developed as a trade centre in the 19th century and became part of Poland by the Potsdam Conference of 1945. Wrocław is the site of a 13th-century cathedral and several Gothic churches. Manufactures include heavy machinery, processed food, textiles and chemicals. Pop. (1974) 565,000.

Wrongful dismissal, dismissal of an employee in breach of a contract of employment. It is a ground in common law whereby an employee may sue an employer for damages. It is distinguished from UNFAIR DISMISSAL, which is dismissal on unfair grounds but not necessarily in breach of a contract of employment. In Britain before the Industrial Relations Act of 1971, an employer could dismiss an employee without cause provided it was with adequate notice.

Wrought iron, commercial form of smelted iron (the other is cast iron), containing less than 0.3% carbon with 1 or 2% slag mixed with it. Originally it was made from ore in a forge, and later in a puddling furnace, where it never becomes molten. Wrought iron replaced bronze in Asia Minor (c.2000 BC) at the beginning of the IRON AGE. In the 19th century wrought iron began to be used in building construction, but was replaced by steel after the invention of the BESSEMER and open-hearth processes. Today wrought iron is used principally for decoration, as in ornamental gates and railings. See also p.394.

Wryneck, bird of the woodpecker family (Picidae) found in deciduous woodlands in Europe. Unlike most of the family, it feeds mainly on the ground. It has brown, grey and white speckles. Length: 16.5cm (6.5in). Species *Jynx torquilla*.

Wuchang. See WUHAN.

Wu Chên (1280–c.1354), Chinese scholar-painter of the YUAN DYNASTY. He painted in a traditional but personal style and helped to develop the tradition of landscape painting. He is particularly associated with scenes of fishermen and was also a great painter of bamboo. See also p.1262.

Wuhan, city in central China, at the confluence of the Han and Yangtze Rivers; the capital of Hubei province. It was formed in 1950 after the merger of three cities and is now the industrial and commercial centre of central China. Products include textiles, iron, steel, heavy machinery, soap and rice. Wuhan also has the largest cotton mill in China. Pop. (1977 est.) 3,500,000.

Wulfstan, Saint (c.1012–95), English ecclesiastic. He became Bishop of Worcester in 1062, and was the only Anglo-Saxon bishop retained after the Norman conquest. He was a loyal supporter of WILLIAM I THE CONQUEROR and William Rufus in their struggles against the barons and the Welsh. He was canonized by INNOCENT III in 1203.

Wren's typical habitat is dense undergrowth low on the ground; few wrens migrate.

Wrestling is one of the oldest sports, the earliest records dating from before 2000 BC.

Wright brothers: Wilbur in 1903. At first neither thought men would fly at night.

Wrynecks are named after the habit of twisting their necks round when frightened.

crystal in a restricted space so that it cannot develop crystal faces. It occurs in the late-forming minerals of IGNEOUS ROCKS. See also p.258.

Xenon, gaseous non-metallic element (symbol Xe) of the NOBLE GAS group, first discovered in 1898. Xenon is present in the Earth's atmosphere (0.000008% by volume) and is obtained by fractionation of liquid air. It is used in discharge lamps. The element forms several compounds including XeF_2 , XeF_4 , XeF_6 , XePtF_6 and XeO_3 . Properties: at.no. 54; at.wt. 131.30; density 1.88 (air = 1); m.p. -111.9°C (-169.42°F); b.p. -107.1°C (-160.78°F); most common isotope Xe^{132} (26.89%).

Xenophanes of Colophon (c.560-c.478 bc), travelling Greek poet and philosopher, often considered to be a precursor of the ELEATIC school. He proposed a version of pantheism, holding that all living creatures have a common natural origin.

Xenophon (c.430-c.354 bc), Greek historian and soldier. He is best known for the *Anabasis*, an account of the march of a Greek mercenary army across Asia Minor in 401-399 bc in support of a pretender to the Persian throne. An Athenian, Xenophon studied with SOCRATES, about whose teaching he wrote the *Memorabilia*. See also p.1209.

Xerography, method of copying documents, known also as photocopying. Photocopying machines contain a drum which is coated with a light-sensitive material. In one widely used process the drum is coated with the element selenium, the electrical resistance of which decreases when it is exposed to light. Where no light falls, as on the areas reflected from the typed areas of a document, the drum remains electrically charged. When the drum is coated with a powdered "ink", this remains stuck, by electrostatic attraction, to the drum in these particular areas, falling away from the other areas. When paper passes over the drum, the "ink" is transferred to its surface, and it is fused on to the paper by a heater before the photocopy leaves the machine. See also pp.616-617.

Xerophyte, any plant that is adapted to survive in dry conditions, in areas subject to drought or in physiologically dry areas such as saltmarshes and acid bogs. Succulents such as CACTI and AGAVES have thick fleshy leaves and stems for storing water. Other adaptations include the ability to shed leaves during drought and waxy or hairy leaf coatings. See also pp.316, 316.

Xerxes I (c.519-465 bc), King of Persia (r. 486-465 bc). His first achievement was to bring Egypt back under Persian rule (484 bc). He launched a campaign to conquer Greece in 480 bc, marching through Macedonia and burning Athens. His fleet was destroyed by the Athenians at SALAMIS, however, and he returned to Asia; the following year, the Persian army in Greece was defeated at Plataea. Xerxes was later assassinated by his own bodyguard. See also pp.1193, 1204.

Xerxes (1738), opera by George Frederick HANDEL, first performed in London. The text, taken from a revised libretto (1654) of Minato, sets the action in ancient Persia. It contains Handel's only purely comic character and also the famous aria now known as Handel's *Largo*, originally a satirical *Larghetto*.

Xhosa, or Xosa, group of related BANTU tribes. The Xhosa moved from E Africa to the vicinity of the Great Fish River, S Africa, in the 17th-18th century. They were defeated by the Europeans in 1835, after which they came under European rule. In culture they are closely related to the ZULUS. The 2.5 million Xhosa live in the Transkei and form an important part of South Africa's industrial and mining workforce.

Xi. See SI.

Xiamen. See AMOY.

Xi'an. See SIAN.

X-ray, electromagnetic ray of shorter wavelength, or higher frequency, than visible light, produced when a CATHODE ray impinges upon matter. X-rays were

discovered by ROENTGEN in 1895. They are normally produced for scientific use in X-RAY TUBES. Because they are able to penetrate matter which is opaque to light, they are used to investigate inaccessible areas, especially of the body. See also RADIOGRAPHY; pp.851, 987.

X-ray astronomy. See ASTRONOMY.

X-ray crystallography, use of X-RAYS to discover the structure of CRYSTALS. See also pp.256-257.

X-ray diffraction. See DIFFRACTION.

X-ray tube, evacuated tube used to provide a source of X-rays for medical or other purposes. It consists of an electron gun producing a stream of ELECTRONS that strike an anode, part of which is made of a heavy metal such as tungsten. The tungsten emits X-rays when it is bombarded by the stream of high-energy electrons.

Xylem, woody vascular tissue of a plant. It conducts water and minerals from the roots to the rest of the plant and provides support for the stems, leaves and roots. See also PHLOEM.

Xylene, organic chemical compound of formula $\text{C}_6\text{H}_4(\text{CH}_3)_2$ obtained from the distillates of coal tar and petroleum, and important as a solvent and chemical intermediate. Chemically it is dimethyl benzene which exists in three isomeric forms: ortho-, meta-, and para-xylene. The isomers have different physical properties.

Xylophone, tuned percussion instrument, made of hardwood bars arranged as in a piano keyboard and played with mallets of various degrees of hardness. The modern xylophone normally has a range of four octaves, extending from middle C upwards.

XYZ Affair (1797-98), diplomatic incident that strained US relations with France. President John ADAMS sent three representatives, Charles Pinckney, John MARSHALL, and Elbridge Gerry, to negotiate a treaty with Revolutionary France to end France's preying on US commerce. Three French agents, known as X, Y and Z, demanded loans and a \$250,000 bribe to be given to TALLEYRAND, the French Foreign Minister, before discussions could begin. The Americans refused. The revelation of the attempt at bribery caused an uproar in the USA and its representatives were recalled.

Y

Y, 25th letter of the alphabet, derived (as were *f*, *u*, and *w*) from the Semitic letter *yaw*, meaning *hook*. It was adopted by the Greeks, but did not enter the Roman alphabet until the 2nd century AD, when it was used in words of Greek origin. In English *y* may be a consonant (particularly at the beginning of a word such as *yell* or *young*) or a vowel, when it duplicates some of the sounds of the letter *i*. See also pp.608-609.

Yachin, Lev (1929-), Soviet footballer, who played for Moscow Dynamo and the Soviet Union. A brilliant goalkeeper with cat-like reflexes, he played a record 74 times for the USSR, including three World Cups, and won a Olympic Games gold medal in 1956.

Yacht, sailing boat or motor-vessel used for pleasure or for racing. Sailing yachts usually have either one or two masts and are built in many sizes, the larger ones being used for ocean racing. Motor-powered yachts are small luxury ships with large crews.

Yacht racing, sailing-boat competition for various classes of YACHT, based on the international rules drawn up by the Yacht Racing Union. The most important, as well as the oldest, international competition is the America's Cup, contested 22 times since 1857. It is named after J. C. Steven's schooner yacht *America*, which won the Royal Yacht Squadron's One Hundred Guineas Cup in 1951. The USA has never failed to defeat challenges for the cup, from Britain, Australia and Canada. Other major races are the Fast-

net race, first sailed in 1925, and the Admiral's Cup, first sailed in 1957. Yachting has been an Olympic sport since 1908.

Yahweh, personal name of the God invoked by the ancient Israelites, in the Bible. It was made up of four consonants, YHWH, and may have been a variant of the Hebrew for "I am" - the name revealed to Moses. The lack of vowel symbols has made pronunciation contentious and results in alternatives such as JEHOVAH.

Yajur-Veda, in HINDUISM, a collection of prayers and sacrificial incantations. It is one of four VEDAS or collections of hymns, oblation verses sacred to Hinduism. The others are the RIG-VEDA, SAMA-VEDA and Atharva-Veda.

Yak, large, powerful, long-haired ox, native to Tibet, with domesticated varieties throughout central Asia; it inhabits barren heights up to 6,100m (20,000ft). Domesticated varieties are generally smaller and varied in colour; they breed freely with domestic cattle. Wild yaks have coarse black hair, except on the tail and flanks, where it hangs as a long fringe. The horns curve upward and outward. Height: to 1.8m (6ft) at the shoulder. Family Bovidae; species *Bos grunniens*. See also pp.294, 320.

Yakuts, Turkic-speaking people who live in Yakut ASSR, USSR. They are noted iron-workers and potters, and formerly lived by semi-nomadic cattle farming and fishing. Horses and blacksmiths were venerated in their shamanistic religion.

Yale, Linus (1821-68), US inventor of various types of locks, including the domestic version that bears his name. See also pp.598, 598.

Yale University, institute of higher education in New Haven, Connecticut, USA. Founded in 1701 in Branford, Connecticut, it operates several colleges for the study of, for example, divinity, law, medicine, art, drama and architecture. Its current charter dates from 1745.

Yalow, Rosalyn (1921-), US biochemist who shared the 1977 Nobel Prize in physiology and medicine with Roger Guillemin and Andrew Schally for her development of a method of detecting peptide HORMONES in the blood. In the 1950s Yalow found that some people who received regular INSULIN injections developed antibodies against the hormone. She discovered that insulin, labelled with radioactive iodine, combined with the antibodies; from this she developed radio-immunological tests to detect the amount of insulin present.

Yalta Conference (1945), meeting at Yalta in the Crimea between US President Franklin D. ROOSEVELT, Prime Minister Winston CHURCHILL of Britain, and Premier Joseph STALIN of the USSR. They met to plan the final attacks on Germany, its postwar occupation and control and the trial and punishment of war criminals. A conference to establish the UNITED NATIONS was called to meet at San Francisco. In return for concessions in the Far East, the USSR agreed to join the war against Japan, after Germany's defeat. See also pp.1700, 1716, 1717.

Yam, any of several species of herbaceous vines that grow in warm and tropical regions and the large, tuberous roots of several tropical species, which are edible. They are often confused with the SWEET POTATO. The plant has a long, annual, climbing stem, with lobed or unlobed leaves and small clusters of greenish, bell-shaped flowers. Family Dioscoreaceae; genus *Dioscorea*. See also pp.682, 683.

Yama, in Indian mythology, lord of death, also worshipped as the first mortal man. He and his sister, Yami, are children of Vivasvat, the sun. Yama is depicted as being green in colour, dressed in red, bearing a club and noose, riding a buffalo. He captures a dying man's spirit with the noose to take it to his kingdom.

Yamasaki, Minoru (1912-), US architect, who designed the Lambert-St Louis Municipal Airport (1953-55) terminal, noted for its concrete vaults. He was also chief designer for the World Trade Centre (1962) in New York City.

Yamato, Japanese clan who gave their

Xenophon's historical narratives are characterized by his love of the truth.

Xerxes's army crossed the Hellespont by bridging it with a double line of boats.

Yachts, generally used for pleasure, may be a sailing craft or motor-driven.

Yaks, despite their size and weight, are agile; if attacked, they are fierce.

CHARLES II. They last accompanied a king into battle at DETINGEN in 1743. They are now a ceremonial force, the Beefeaters (a popular name first used, apparently, in 1645). The name Beefeaters is also given to the Yeomen Warders of the Tower of London who lack the cross-belt worn by the Yeomen of the Guard.

Yeomen of the Guard, The (1888), subtitled *The Merryman and his Maid*, two-act operetta by Arthur SULLIVAN and William GILBERT, first produced at the Savoy Theatre, London. It is the most serious and realistic of their works.

Yeovil, county district in SE SOMERSET, England; created in 1974 under the Local Government Act (1972). Area: 959sq km (370sq miles). Pop. (1979 est.) 129,300.

Yerba maté. See MATÉ.

Yerevan, capital of Armenia (Armánskaja SSR) USSR on the River Razdan 176km (110 miles) S of Tbilisi. In the 7th century the city was the capital of Armenia, although under Persian control, and the site of crossroads for caravan routes between India and Transcaucasia. It is the site of a 16th-century Turkish fortress. Products include chemicals, plastics, cables, electrical equipment and wine. Pop. (1970) 767,000.

Yerkes, Robert Mearns (1876–1956), US biologist and psychologist. He was a pioneer in the comparative study of apes and the development of methods to test the abilities of lower animals and humans. His publications include *The Mind of a Gorilla* (1927) and *Chimpanzees: A Laboratory Colony* (1943).

Yersin, Alexandre-Émile-John (1863–1943), Swiss-French bacteriologist. In Hong Kong he discovered (1894) the plague bacillus and developed a serum against it in 1895. Yersin is also reputed to have introduced the rubber tree into Indochina.

Yerushalayim (Al-Quds). See JERUSALEM.

Yessenin, Sergey Aleksandrovich (1895–1925), Russian poet, brought up in the country by his peasant grandfather. By 1916 he had been accepted by the literary salons of Moscow and Petersburg, and celebrated the October Revolution in numerous poetic works. In 1922 he married Isadora DUNCAN. Disillusioned, he retired alone to Persia in 1924 and hanged himself the following year in Leningrad. His works include the verse-play *Pugachov* (1921) and the poetry *Chorny chelovek* (1925).

Yeti. See ABOMINABLE SNOWMAN.

Yevtushenko, Yevgeny (1933–), Soviet poet. He is an outspoken writer frequently critical of Soviet authorities, and so much of his work remains unpublished in the USSR. His verse includes *Precocious Autobiography* (1963) and *Stolen Apples* (1971).

Yew, any of a number of evergreen shrubs and trees native to temperate regions of the Northern Hemisphere. They have stiff, narrow, dark green needles, often with pale undersides, and red, berry-like fruits. Height: to 25m (80ft). Family Taxaceae; genus *Taxus*. See also pp.308, 369.

Yezidis, or Devil Worshipers, members of a small religious community in and around Kurdistan, whose beliefs contain elements of the CHRISTIAN, ZOROASTRIAN, MANICHAEAN, JEWISH, NESTORIAN and MUSLIM faiths. Yezidis conceive of God as a passive being who has entrusted the affairs of the world to seven angels. The chief of them, Malak Ta'us (peacock angel), fell and became SATAN, but later repented and became good and active. Yezidis worship him.

Yezo. See HOKKAIDŌ.

Yggdrasil, in Scandinavian mythology, the world tree, a giant evergreen ash at the centre of the cosmos, linking the underworld with the land of giants and men and extending to ASGARD, the abode of the gods. Its symbolism of renewal may be reflected in the Christmas tree.

Yiddish, language spoken for centuries by Jews living in central and E Europe, and later in other countries of the world (including the USA) to which Jews had migrated. It is basically a variety of German, with many Hebrew and Slavic words

added, and is written in the Hebrew alphabet.

Yin dynasty. See SHANG DYNASTY.

Yin-yang, in Chinese philosophy, the interaction of complementary forces, two cosmic energy modes comprising the TAO or the eternal dynamic way of the universe. It is a recurring theme in Taoist and CONFUCIAN texts: heaven is yang, or the active, bright, male principle; earth is yin, or the passive, dark, female principle. All the things of nature and society are composed of different combinations of these two principles of polarity. The hexagrams of the *I Ching* (see BOOK OF CHANGES) embody yin and yang. See also TUNG CHUNG-SHU.

YMCA (Young Men's Christian Association), Christian association for young men established in London in 1844 by George Williams. Its aim is to develop Christian morals and leadership qualities in young people. Clubs were soon formed in the USA and Australia, and the world alliance of the YMCA was formed in Geneva in 1855.

Ymir, in Norse mythology, the first living being, a giant. From him the race of giants was created together with the cow AUDUMMULA, who nourished them all. While licking salt, the cow uncovered Buri, whose son Bor married Bestla, Ymir's daughter and fathered the gods ODIN, Vili and Ve. See also MIDGARD.

Yoga (Sanskrit for "union"), term used for a number of Hindu disciplines to aid the union of the soul with God. Based on the Yoga-sutras of Patañjali (written at about the time of Christ), the practice of yoga generally involves moral restraints, meditation and the awakening of physical energy centres through specific postures (*asanas*) or exercises. Devoted to freeing the soul or self from earthly cares, these ancient practices have become recently popular in the West as a means of relaxation, self-control and enlightenment.

Yogācāra, philosophical school of Mahāyāna BUDDHISM. It arose in India in about the 6th century AD and holds that the reality which mankind perceives is actually an illusion; only the consciousness of momentary events exists. This consciousness orders sense perceptions to give the false idea of a consistent reality.

Yokohama, port and major industrial city on SE Honshū, Japan, on the W shore of Tokyo Bay, approx. 30km (18 miles) SSW of Tokyo; capital of Kanagawa prefecture; chief port for Tokyo and third largest city in Japan. The city grew from a small fishing village to a major port after being opened to foreign trade in 1859. There are two universities in the city. Industries: steel, motor vehicles, oil refining, textiles, machinery, chemicals, shipbuilding, electrical equipment. Pop. (1979) 2,724,000.

Yom Kippur, the Day of Atonement in JUDAISM. It is the last of the Ten Days of Penitence that begin the new year. On this solemn day set aside for prayer and fasting man is called to account for his sins and reconcile himself with God and man. It is described as the SABBATH of Sabbaths.

Yonge, Charlotte Mary (1823–1901), British novelist. A dedicated Christian, she did much to promote the OXFORD MOVEMENT. Her novels include *The Heir of Redclyffe* (1853), *Heartsease* (1854) and *The Daisy Chain* (1856).

York, Archbishop of, second-highest officer of the Church of England. The acts of the Council of Arles (314) mention a bishop of York, but the Christian community in York was destroyed by Saxon invaders. The see dates without a break from the consecration of Wilfrid in 664. It was raised to archbishopric dignity in 735, when Egbert was given the title Primate of the Northern Province. The Archbishop is now called the Primate of England (the Archbishop of Canterbury is Primate of all England).

York, Richard, Duke of (1411–60), descendant of EDWARD III of England and claimant to the throne. He was the largest landowner in the kingdom, whose attempt to gain the throne ended with the defeat of the Yorkists at Wakefield by the forces of MARGARET OF ANJOU in 1460. York was slain during the battle, but his son, EDWARD IV, became king the next year.

York, city and county district in NORTH YORKSHIRE, N England. The city, at the confluence of the Ouse and Foss rivers, was an important Roman military post named Eboracum. York is the ecclesiastical centre of the North of England: York Minster dates from the 13th century. There is a university (1963) in the city. Tourism is important and other industries include engineering, confectionery and the manufacture of precision instruments. The county district was created in 1974 under the Local Government Act (1972). Area: 29sq km (11sq miles). Pop. (1981 est.) 100,100.

York, one of the five boroughs of Toronto, SE Ontario, Canada. The original town of York was founded in 1793. The borough was formed in 1967 from the amalgamation of York and the town of Weston. Pop. (1971) 147,305.

York, House of, branch of the English PLANTAGENET family, descended from Edmund of LANGLEY, 1st Duke of York (1342–1402), fourth surviving son of EDWARD III. The claim to the English throne of York's grandson, Richard, came also through his mother, who was the great-granddaughter of Lionel, Duke of CLARENCE, third son of Edward III. This claim led to the Wars of the ROSES, a struggle between the Houses of York and LANCASTER. The House of York provided three kings: EDWARD IV, EDWARD V and RICHARD III. With the defeat and death of Richard III at MARKET BOSWORTH (1485) the crown passed to the House of TUDOR.

Yorkists. See YORK, HOUSE OF.

York Mystery Plays, The, cycle of 48 medieval MYSTERY PLAYS which starts with the Creation and ends with the Last Judgement. They were performed in York c. 1300–1569 by craft guilds who each did the particular one relating to their trade. Reformation opposition caused them to cease, but since 1951 annual performances in York have been revived.

Yorkshire, formerly the largest county in England, in N England, on the North Sea between the Humber Estuary (S) and the River Tees (N). Yorkshire was divided into three administrative districts, or ridings: East Riding, with Beverley as its county town; North Riding, with Northallerton as its county town; and West Riding, with Wakefield as the county town. The city of York was a separate administrative area. The Pennine Hills in the W slope down to the fertile Vale of York. Further E are moorland areas: the Yorkshire Wolds, the North York Moors and the Cleveland Hills. The region is drained chiefly by the Ouse, Derwent and Aire rivers. The principal farming activities in the area are the cultivation of cereals and the rearing of cattle and sheep. There are rich coal deposits in the region, particularly in the W. Yorkshire includes some of the great industrial cities of the North of England such as Leeds, Sheffield and Bradford. Industries include iron and steel, chemicals and textiles. Under the Local Government Act (1972) Yorkshire was divided into the new counties of HUMBERSIDE, NORTH YORKSHIRE, SOUTH YORKSHIRE and WEST YORKSHIRE. Part of the North Riding was included in CLEVELAND. Area of former county: 15,859sq km (6,123sq miles).

Yorkshire terrier, small long-haired dog originally bred in Lancashire and Yorkshire, England, in the 19th century. It has a small head with a short muzzle and small V-shaped erect ears. The compact body has a short, straight back and is set on short legs, which are hidden under the coat. The tail is commonly docked. The straight, fine, silky coat is generally blue and tan. Height: to 20cm (8in) at the shoulder; weight to 3 kg (7lb).

Yorktown, Siege of (19 Oct. 1781), last major military campaign of the War of AMERICAN INDEPENDENCE. Trapped on the peninsula at Yorktown, 7,000 British troops under Lord CORNWALLIS surrendered to the allied American and French forces.

Yoruba, people of SW Nigeria of basically Christian or Islamic faith. Most are farmers, growing crops which include yams, maize and cocoa. Many live in towns built

Yevgeny Yevtushenko leads Soviet poets in the cry for greater artistic freedom.

Yin-yang symbol; the two principles, light male and dark female, in balance.

York Minster's great East window is a fine example of late Decorated style.

Yorkshire terriers, bred small in the 1850s, are brave enough to kill rats.

Zapotec, central American Indian group that lives in part of the Mexican state of Oaxaca. The Zapotec built great pre-Conquest urban centres at Mitla and MONTE ALBÁN, and fought to preserve their independence from the rival Mixtecs and Aztecs until the arrival of the Spanish. See also pp.1178, 1179, 1364, 1364.

Zapoteky, Antonín (1884–1957), Czechoslovak Premier from 1948 to 1953 and President from 1953 to 1957. One of the founders of the Communist Party of Czechoslovakia, he wrote numerous articles and documentary novels about the Czech proletarian movement.

Zappa, Francis Vincent ("Frank") (1940–), us rock musician. Classically trained, Zappa's first successes were with film sound-tracks, eg *Run Home Slow* (1963). With his group, The Mothers of Invention, Zappa produced closely edited recordings such as *Freak Out!* (1966) and *We're Only In It For The Money* (1967).

Zarathustra, See ZOROASTER.

Zaria, town in central Nigeria, approx. 144km (90 miles) sw of Kano. Originally one of the seven HAUSA city states, Zaria was taken by British troops in 1901. It is now a trade centre for the surrounding agricultural region. Products include textiles, hides and handicrafts. Pop. (1975) 224,000.

Zastrugi, irregular ridges cut in surface snow by wind erosion. They vary in size according to the force and duration of the wind. Arctic travellers take careful note of them because they make journeying by sled easier and faster.

Zatopek, Emil (1922–), Czechoslovakian athlete. He won a gold medal in the 10,000m race at the 1948 Olympics and three gold medals (5,000m, 10,000m and the marathon) at the 1952 Olympics. From 1948 to 1954 he was undefeated over 10,000m.

Zealots, Jewish sect, active in opposition to Roman rule. They refused to agree that Jews could be ruled by pagans and led resistance to the Roman census of AD 6, pursued a terrorist campaign and played an important role in the rising of AD 66. Their activities continued into the 2nd century AD.

Zeami Motokiyo (1363–1443), Japanese playwright and actor who brought the NO drama to its peak of refinement. Using a formal style, music and singing (but no scenery) he wrote more than 100 plays.

Zebra, any of three strikingly patterned, striped, black and white equine mammals of the grasslands of Africa; the stripes are arranged in various patterns, according to species. It has long ears, a tufted tail and narrow hooves, more strongly resembling an ass than a horse in general shape. Height: to 140cm (55in) at the shoulder. Family Equidae; genus *Equus*. See also pp.95, 95.

Zechariah, biblical author and 11th of the 12 minor prophets. He was HAGGAI's contemporary and shared his concern for rebuilding the TEMPLE in Jerusalem.

Zedekiah, several biblical figures, most notably the last King of JUDAH and JERUSALEM (597–586 BC). The son of JOSIAH, he sided with Egypt and violated his pledge of allegiance to NEBUCHADNEZZAR. He was imprisoned in BABYLON, where he died.

Zeeland, province of the sw Netherlands, on the North Sea, made up of a mainland area bordering Belgium and several islands off the North Sea coast, namely Walcheren, North and South Beveland, Schouwen, Tholen and Sint Philipsland. The islands are connected to the mainland by bridges and dikes as part of the Delta Plan, an extensive flood-control system, which is scheduled to be completed in 1980 to create a rich agricultural region. The capital is Middelburg. Products include cereals, flax and potatoes. Industries include fishing and tourism. Area: 2,700sq km (1,043sq miles). Pop. (1980 est.) 348,268.

Zeeman, Pieter (1865–1943), Dutch physicist. He shared the 1902 Nobel Prize in physics with his teacher Hendrik LORENTZ for their discovery in 1896 of the ZEEMAN EFFECT. Zeeman also detected the magnetic fields at the surface of the Sun. **Zeeman effect**, in physics, effect produced

by a strong magnetic field on the light emitted by a radiant body, observed as a splitting of its spectral lines. It was first observed by P. ZEEMAN in 1896. The effect has been useful in investigating the charge/mass ratio and magnetic moment of an ELECTRON.

Zeffirelli, Franco (1923–), Italian stage and film director. He worked at Covent Garden on *Cavalleria Rusticana*, at Stratford-upon-Avon on *Othello*, and on Broadway on *The Lady of the Camellias*. His films include *The Taming of the Shrew* (1966), *Romeo and Juliet* (1968) and *Brother Sun and Sister Moon* (1973).

Zeiss, Carl (1816–88), German manufacturer of optical instruments. In 1846 he established a factory at Jena and made various optical components, including lenses, binoculars and microscopes.

Zela, Battles of, two battles of Zela in Asia Minor. At the first (c.67 BC) MITHRIDATES VI, King of Pontus, defeated the Romans. Julius CAESAR defeated Pharnaces, King of Pontus, at the second battle (47 BC) and recorded the victory in the famous message, "Veni, vidi, vici" ("I came, I saw, I conquered").

Zelenchukskaya Observatory, World's largest optical telescope, built at Zelenchukskaya, USSR. It is a reflecting telescope with a conventional dome and a 6m (20ft) reflector; it started operation in February 1976 and is used to study remote star systems. See also pp.920, 920.

Zemstvos (1864–1917), locally elected assemblies in Russia which existed on the district and provincial levels. Voters included landed proprietors, urban merchants and peasants. They were active in the 1905 and 1917 revolutions and were abolished by the BOLSHEVIKS.

Zen, Japanese school of BUDDHISM initially developed in China where it is known as Ch'an. Instead of doctrines and scriptures, mind-to-mind instruction from master to disciple is emphasized in order to achieve *satori*, or the awakening of Buddha-nature inherent in everyone. There are two major Zen sects. Rinzai, introduced to Japan from China in 1191, emphasizes sudden shock and meditation on paradoxical statements. The Soto sect, also brought from China (in 1227), advocates the method of quiet meditation. In its secondary emphasis on mental tranquillity, fearlessness, and spontaneity, Zen has had a great influence on Japanese culture. Zen priests inspired art, literature, the tea ceremony and the NO play. In recent decades, a number of Zen groups have been formed in Europe and the USA. See also p.1915.

Zend-Avesta, alternative name for the sacred book of the ZOROASTRIANS; it is also called AVESTA (probably meaning injunction). Zend means tradition or commentary.

Zenith, in astronomy, point on the celestial sphere which is directly overhead. The zenith distance of a heavenly body is the angle it makes with the zenith. In common use it means the highest point.

Zeno (426–491), E Roman emperor (r.474–491), son-in-law of Leo I. IN 475 he yielded to the usurper Basiliscus for 20 months. He sought unsuccessfully to reconcile the heretical Monophysites with the orthodox Christians through his *Henotikon* (482). By persuading Theodoric to invade Italy he finally rid the empire of the Ostrogoths in 489.

Zenobia (fl. 3rd century AD), Queen of PALMYRA and wife of the Syrian nobleman Odenathus. After his murder in 267 she secured power for herself in the name of her young son. Zenobia's ambition led her to expand her territories to Asia Minor and Egypt until the Roman Emperor Aurelian marched against her. She was defeated in AD 272 and taken captive to Rome.

Zeno of Citium (c.334–262 BC), Greek philosopher and founder of the stoic school. Proceeding from the cynic concept of self-sufficiency, he stressed the unity of the universe and the brotherhood of men living in harmony with the cosmos. He claimed virtue to be the only good and wealth, illness and death to be of no human concern.

Zeno of Elea (c.495–c.430 BC), Greek philosopher. A disciple of PARMENIDES, he defended the latter's doctrine of the sole reality of changeless "being". Through his paradoxical arguments, he sought to reveal logical absurdities in theories of motion and change. See also ELEATICISM; pp.1881, 1886–1887.

Zeolite, aluminium silicate mineral, similar to FELSPAR from which it is often formed by alteration. There are many zeolites varying in hardness from 3 to 5 and in specific gravity from 2 to 2.4, such as analcite, Na(AlSi₃O₈)·H₂O, and scolecite, Ca(Al₂Si₃O₁₀)·3H₂O.

Zephyrus, in Greek mythology, the west wind. He was the brother of Boreas, the north wind, Eurus, the east and NOTUS, the south wind.

Zepplin, Ferdinand Adolf August Heinrich, Count von (1838–1917), German army officer and inventor. He served in the armies of Württemberg and Prussia and while an observer with the Union army during the us Civil War (1861–65) made his first balloon ascent. In 1900 he invented the first rigid airship, named Zepplin after him. See also p.512.

Zermelo, Ernst (1871–1956), German mathematician who was one of the founders of axiomatic SET THEORY. The Zermelo-Fraenkel axioms stipulate which collections of objects constitute sets. See also p.790.

Zernike, Frits (1888–1966), Dutch physicist who in 1934 developed the phase-contrast microscope, in which objects being viewed take on a different colour from their surroundings. He received the 1953 Nobel Prize in physics.

Zero, in mathematics, that number which, when added to any number *x*, leaves the number unchanged: *x* + 0 = *x*. Multiplication of a number by zero gives zero. Division by zero is undefined. The concept of zero was unknown to the ancient Greeks and was introduced to the West by the Arabs, who took it from the Hindus. See also p.780.

Zerqa, or Zarqa, river in N Jordan. It rises w of Amman, and flows N and then w to join the River Jordan. It was known in ancient times as the Jabbok.

Zeta, machine built in Harwell, Britain, in the 1950s by the Atomic Energy Authority to investigate the possibility of harnessing the power of thermonuclear fusion. Zeta is toroidal (doughnut-shaped), its inner space filled with a PLASMA of ionized gas. Surrounding the torus are giant magnets, the fields of which "pinch" the plasma discharge inwards from the walls of the torus, allowing it to be raised even further in temperature.

Zeta Cancri, group of four stars in the constellation of Cancer consisting of two binary systems. Zeta-one has a period of 59.6 years, Zeta-two is a close binary with a period of 17.6 years.

Zetland, See SHETLAND ISLANDS.

Zeus, in Greek mythology, the sky god, lord of the wind, clouds, rain and thunder. Zeus was the son of Rhea and the TITAN. His father ate all his offspring in fear of a prophecy that one of his sons would overthrow him, but Rhea hid Zeus and later he duly deposed Cronus. Zeus was the supreme deity.

Zhuangzi (Dzongarian), arid region in nw China, between the Tien Shan and Altai Mts. Ruled by Dzungars, a Mongol tribe, in the 17th century, it was taken by the Chinese in 1873. Some of the population are nomadic, raising cattle, sheep and horses. The sedentary population grow cereals and sugar-beet but there has been a large influx of Chinese to work on industrial schemes. The discovery of oil in 1955 provided the impetus for further development of the area. Area: approx. 777,000sq km (300,000sq miles).

Zhukov, Georgi Konstantinovich (1896–1974), Soviet military commander and political figure. In WWII he led the 1941 defence of Moscow, broke the German sieges of Stalingrad and Leningrad and in 1945 led the final assault on Berlin. He became defence minister in 1955 and was briefly a member of the PRESIDUM in 1957. He received the Order of Lenin in 1966. See also p.1711.

Zick, Januarius Johann (1730–97), German painter. He studied the work of WATTEAU in Paris, and in Germany after 1758 painted many altarpieces in a profuse ROCCO style.

Ziegfeld Follies, series of theatrical revues staged by the us theatrical producer Florenz Ziegfeld (1869–1932). It ran for 24 years (1907–31) and was famed for its lavish sets and glamorous showgirls.

Ziegler, Karl (1898–1973), German chemist who shared the 1963 Nobel Prize in chemistry with Giulio Natta for his research into POLYMERS. Ziegler discovered a technique whereby a resin with metal ions attached could be used as a catalyst in the production of POLYETHYLENE. He also did research into aromatic compounds and developed organo-metallic compounds that were more reactive than GRIGNARD REAGENTS.

Ziggurat, Babylonian and Assyrian monumental religious structure, constructed as a truncated pyramid in diminishing tiers, usually square or rectangular. The shrine at the top was reached by a series of ramps. Ziggurats date from 3000 to 600 BC. See also p.1164.

Zimbabwe, Name (since 1980) of the former "breakaway" British colony of Rhodesia. See also p.2175.

Zimbabwe, ruined city in SE Zimbabwe (Rhodesia), 27km (17 miles) from Port Victoria. The name is believed by some scholars to mean "houses of stone", a reference to the large, well-preserved buildings. The ruins were discovered in 1867 and radiocarbon tests indicate that some are about 1,000 years old. See also p.1363.

Zimbabwe African People's Union, Rhodesian political party that represents the blacks. It was established in 1961 by Joshua NKOMO as a reorganization of the National Democratic Party, which had been banned the same year for subversion. Banned itself since 1962, it has continued to operate from Dar-es-Salaam and Lusaka. It was a party to the Geneva conference held in late 1976 and early 1977 which aimed to achieve a peaceful settlement to the political crises in Rhodesia (Zimbabwe).

Zinc, metallic element (symbol Zn) of group IIB of the periodic table, known from early times. Chief ores are zinc blende and sphalerite (sulphides), smithsonite (carbonate) and calamine (carbonate). The element is used in many alloys, including brass, bronze, nickel silver and soft solder. It is also used in galvanizing and in producing zinc compounds. Properties: at.no. 30; at.wt. 65.37; s.g. 7.133 (25°C); m.p. 419.58°C (787.2°F); b.p. 907°C (1,665°F); most common isotope Zn⁶⁴ (48.89%). See also p.902.

Zinc oxide, white powder, formula ZnO, used in ointments as a mild antiseptic, astringent and protection against drying of ECZEMA and other skin conditions.

Zinjanthropus, See NUTCRACKER MAN.

Zinnemann, Fred (1907–), us film director, b. Austria. His major films include *The Seventh Cross* (1944), *High Noon* (1952), *From Here to Eternity* (1953) *The Nun's Story* (1958) and *Julia* (1978). See also p.1753.

Zinnia, genus of mainly annual herbs and shrubs, native to the USA and South America. Most garden zinnias are varieties of *Z. elegans* or *Z. angustifolia* and have yellow or brown disc flowers and ray flowers of most colours, except blue. Height: to 91cm (3ft). Family Compositae.

Zinoviev, Grigori Evseyevich (1883–1936), Soviet political leader. A self-educated lawyer, he joined the BOLSHEVIKS in 1903 and was active among the workers in St Petersburg in the RUSSIAN REVOLUTION of 1905. He was a close collaborator of V. I. LENIN in exile (1908–17), but opposed him and supported a coalition government after the 1917 revolution. In the 1920s he fell from power and Joseph STALIN expelled him from the party (1927). He was arrested in 1935 and later executed. See also pp.1677, 1678–1679, 1678, 1693.

Zion, height in Jerusalem, Israel. It is a centre of Jewish spiritual life and symbolic
